Free PDF Quiz 2025 Salesforce PDI: Platform Developer I (PDI) – Valid Exam Materials

Our agreeable staffs are obliging to offer help 24/7 without self-seeking intention and present our after-sales services in a most favorable light. We have patient colleagues offering help and solve your problems and questions of our materials all the way. Besides, we remunerate exam candidates who fail the PDI Exam Torrent after choosing our PDI study tools, which kind of situation is rare but we still support your dream and help you avoid any kind of loss. Just try it do it, and we will be your strong backup.

Salesforce Platform Developer I (PDI) Sample Questions (Q18-Q23):

NEW QUESTION # 18

A developer must troubleshoot to pinpoint the causes of performance issues when a custom page loads in their org. Which tool should the developer use to troubleshoot query performance?

- A. Setup Menu
- B. AppExchange
- C. Visual Studio Code IDE
- **D. Developer Console**

Answer: D

Explanation:

- * Why Developer Console?
- * The Developer Console provides tools to troubleshoot query performance, including the Query Plan tool.
- * The Query Plan tool evaluates SOQL query performance and provides insight into query costs and optimization.
- * Why Not Other Options?
- * A. Setup Menu: Used for administrative tasks, not performance troubleshooting.

* B. Visual Studio Code IDE: Useful for development, but does not offer query performance tools.

* C. AppExchange: Provides apps but does not directly help with query troubleshooting.

References: Query Plan Tool https://developer.salesforce.com/docs/atlas.en-us.220.0.salesforce_console.meta/salesforce_console/salesforce_console_query_plan.htm

NEW QUESTION # 19

Universal Containers implemented a private sharing model for the Account object. A custom Account search tool was developed with Apex to help sales representatives find accounts that match multiple criteria they specify. Since its release, users of the tool report they can see Accounts they do not own. What should the developer use to enforce sharing permission for the currently logged-in user while using the custom search tool?

- A. Use the without sharing keyword on the class declaration.
- B. Use the UserInfo Apex class to filter all SOQL queries to returned records owned by the logged-in user.
- **C. Use the with sharing keyword on the class declaration.**
- D. Use the schema describe calls to determine if the logged-in users has access to the Account object.

Answer: C

Explanation:

Use the with sharing keyword on the class declaration. The with sharing keyword ensures that the Apex code respects the object-level, field-level, and record-level sharing settings for the user who is running the Apex code. This means that the code will only return records that the user has access to, according to their Sharing Settings. You can find more information about the with sharing keyword in the official Salesforce documentation (https://developer.salesforce.com/docs/atlas.en-us.apexcode.meta/apexcode/apex_classes_keywords_sharing.htm).

NEW QUESTION # 20

Using the Schema Builder, a developer tries to change the API name of a field that is referenced in an Apex test class. What is the end result?

- **A. The API name of the field is changed, and a warning is issued to update the class.**
- B. The API name is not changed and there are no other impacts.
- C. The API name of the field and the reference in the test class is changed.
- D. The API name of the field and the reference in the test class is updated.

Answer: A

NEW QUESTION # 21

How should a developer write unit tests for a private method in an Apex class?

- A. Mark the Apex class as global.
- **B. Use the @TestVisible annotation.**
- C. Use the SeeAllData annotation.
- D. Add a test method in the Apex class.

Answer: B

Explanation:

The @TestVisible annotation allows private methods or variables to be accessed in test classes. This ensures that the private method can be adequately tested without changing its access modifier.

Reference: Testing Apex Code

Below is the formatted response for the provided question, adhering to the specified format and requirements.

The question falls under the Salesforce Platform and Declarative Features topic, as it involves securing SOQL queries against injection vulnerabilities in the context of Visualforce, which is a key concept in the Salesforce Platform Developer I certification. The answer is based on official Salesforce Platform Developer I documentation, with a comprehensive explanation and references to relevant Salesforce documentation. Since the question asks for two correct answers, the response will identify both and explain why they are safe, as well as why the others are not.

NEW QUESTION # 22

Which annotation exposes an Apex class as a RESTful web service?

- A. `@AuraEnabled(cacheable=true)`
- B. `@RemoteAction`
- C. `@HttpInvocable`
- D. `@RestResource (urlMapping='/myService/*')`

Answer: D

Explanation:

To expose an Apex class as a RESTful web service, you use the `@RestResource` annotation.

Option C: `@RestResource(urlMapping='/myService/*')`

`@RestResource` Annotation:

The `@RestResource` annotation is used to define an Apex class as a RESTful web service, specifying the URL mapping. Methods within the class are annotated with `@HttpGet`, `@HttpPost`, `@HttpPut`, etc., to handle HTTP requests.

Example:

apex

Copy code

```
@RestResource(urlMapping='/myService/*')
global with sharing class MyRestService {
    @HttpGet
    global static String doGet() {
// Implementation
    }
}
```

Reference:

"Use `@RestResource` to expose an Apex class as a RESTful web service."

- Apex Developer Guide: Exposing Apex Classes as REST Web Services

Why Other Options Are Incorrect:

Option A: `@HttpInvocable`

There is no `@HttpInvocable` annotation in Apex.

Option B: `@RemoteAction`

Used to expose methods to JavaScript in Visualforce pages, not for REST services.

"`@RemoteAction` methods enable you to call methods in Apex controllers from JavaScript code in a Visualforce page."

- Apex Developer Guide: Remote Action Methods

Option D: `@AuraEnabled(cacheable=true)`

Used to expose Apex methods to Lightning components, not for REST services.

Conclusion:

Using `@RestResource` with a URL mapping is the correct way to expose an Apex class as a RESTful web service.

NEW QUESTION # 23

.....

Our PDI practice torrent offers you more than 99% pass guarantee, which means that if you study our PDI materials by heart and take our suggestion into consideration, you will absolutely get the PDI certificate and achieve your goal. Meanwhile, if you want to keep studying this course, you can still enjoy the well-rounded services by PDI Test Prep, our after-sale services can update your existing PDI study materials within a year and a discount more than one year.
