Our advanced operation system on the Salesforce PDI learning guide will automatically encrypt all of the personal information on our Platform Developer I (PDI) PDI practice dumps of our buyers immediately, and after purchasing, it only takes 5 to 10 minutes before our operation system sending our Platform Developer I (PDI) PDI Study Materials to your email address, there is nothing that you need to worry about, and we will spear no effort to protect your interests from any danger and ensure you the fastest delivery.

Salesforce PDI Exam is designed for developers who have experience working with the Salesforce platform and are looking to become certified Salesforce developers. PDI exam covers a range of topics, including data modeling, user interface, Apex, and Visualforce. PDI Exam is designed to test the developer's knowledge of the Salesforce platform and their ability to develop custom solutions using the platform.

Salesforce Platform Developer I (PDI) Sample Questions (Q27-Q32):

NEW QUESTION # 27

A developer needs to implement a custom SOAP Web Service that is used by an external Web Application.

The developer chooses to include helper methods that are not used by the Web Application in the implementation of the Web Service Class.

Which code segment shows the correct declaration of the class and methods?

- A.

```
global class WebserviceClass {
    private static Boolean helperMethod() { /* implementation ... */ }
    global String updateRecords() { /* implementation ... */ }
}
```

- B.

```
webservice class WebserviceClass {
    private static Boolean helperMethod() { /* implementation ... */ }
    global static String updateRecords() { /* implementation ... */ }
}
```

```
webservice class WebserviceClass {
    private static Boolean helperMethod() { /* implementation ... */ }
    webservice static String updateRecords() { /* implementation ... */ }
}
```

- C.

```
global class WebserviceClass {
    private static Boolean helperMethod() { /* implementation ... */ }
}
```

- D.

Answer: B

Explanation:

In Option B, the `webservice` keyword is used to declare the class and the specific method `updateRecords`. This is correct because:

- * The helper method `helperMethod` is private and not exposed to the external application.
- * The `webservice` method `updateRecords` is declared `global static`, making it accessible externally.

Reference: Apex Web Services

NEW QUESTION # 28

How would a developer change the field type of a custom field on the Account object from string to an integer?

- A. Remove all references in the code, make the change in the declarative UI, and restore the references with the new type.
- B. Make the changes in the developer console, and then the change will automatically be reflected in the Apex code.
- C. Make the change in the declarative UI, then update the field type to an integer field in the Apex code.
- D. Make the change in the declarative UI, and then the change will automatically be reflected in the Apex code.

Answer: A

NEW QUESTION # 29

Get Cloudy Consulting (GCC) has a multitude of servers that host its customers' websites. GCC wants to provide a servers status page that is always on display in its call center. It should update in real time with any changes made to any servers. To accommodate this on the server side, a developer created a server Update platform event.

The developer is working on a Lightning web component to display the information.

- A. `import ( subscribe, unsubscribe, onError ) from 'lightning/pubsub'`
- B. `import ( subscribe, unsubscribe, onError ) from 'lightning/ServerUpdate'`
- C. `import ( subscribe, unsubscribe, onError ) from 'lightning/MessageChannel'`
- D. `import ( subscribe, unsubscribe, onError ) from 'lightning/empApi'`

Answer: D
