## Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q223-Q228):

### NEW QUESTION # 223

A function named newProdCode needs to be defined that accepts two input parameters, an integer value for itemID and a string value for productCategory, and returns a new product code.

What is the correct DataWeave code to define the newProdCode function?

- A. `var newProdCode(itemID: Number, productCategory: String) -> "PC-" ++ productCategory ++ (itemID as String)`
- B. `function newProdCode(itemID: Number, productCategory: String) = "PC-" ++ productCategory ++ (itemID as String)`
- C. `fun newProdCode(itemID: Number, productCategory: String) = "PC-" ++ productCategory ++ (itemID as String)`
- D. `fun newProdCode{itemID: Number, productCategory: String} -> "PC-" ++ productCategory ++ (itemID as String)`

**Answer: C**

### NEW QUESTION # 224

Refer to the exhibit.

```

#%RAML 1.0
title: /salesforce

/accounts:
  get:
    queryParameters:
      account_type:
        required: true
        enum:
          - "retail"
          - "commercial"
      industry:
        required: true
        enum:
          - "finance"
          - "construction"
          - "government"

```

This RAML specification includes a resource and method to retrieve accounts by account\_type and industry. What is the correct URI to get all retail finance accounts?

- A. /accounts?account\_type=retail&industry=finance
- B. /accounts/account\_type=retail/industry=finance
- C. /accounts?account\_type:retail&industry:finance
- D. /accounts/retail/finance

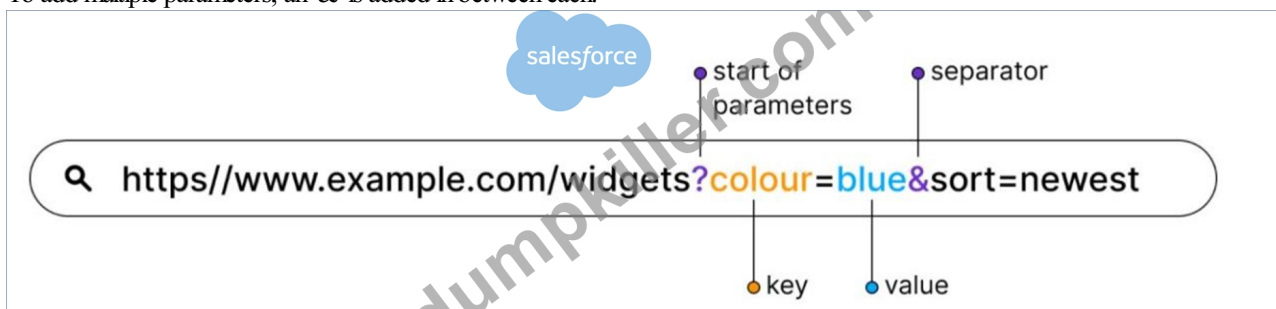

**Answer: A**

Explanation:

Correct answer is /accounts?account\_type=retail&industry=finance

Query parameters are a defined set of parameters attached to the end of a url. They are extensions of the URL that are used to help define specific content or actions based on the data being passed. To append query params to the end of a URL, a '?' Is added followed immediately by a query parameter.

To add multiple parameters, an '&' is added in between each.

## NEW QUESTION # 225

A

web client submits a request to `http://localhost:8081?accountType=personal`. The query parameter is captured using a Set Variable transformer to a variable named `accountType`.

What is the correct DataWeave expression to log `accountType`?

- A. Account Type: # [attributes.accountType]
- B. Account Type: #[flowVars.accountType]
- C. Account Type: #[vars.accountType]
- D. Account Type: #[message.inboundProperties.accountType]

**Answer: C**

Explanation:

vars: Keyword for accessing a variable, for example, through aDataWeave expression in a Mule component, such as the Logger, or from an Input or Output parameter of an operation. If the name of your variable is myVar, you can access it like this: vars.myVar  
Hence correct answer is Account Type: #[vars.accountType]

#### NEW QUESTION # 226

A RAML example fragment named StudentExample.raml is placed in the examples folder in an API specification project. What is the correct syntax to reference the fragment?

- A. examples: #import examples/StudentExample.raml
- B. examples: !include examples/StudentExample.raml
- C. examples: #import StudentExample.raml
- D. examples: !include StudentExample.raml

**Answer: B**

Explanation:

To include property. To keep the API definition concise, you can include external content, such as documentation, schemas, and frequently used patterns outside the definition itself. The parser interprets !include as if the content of the externally-hosted file or a URL were declared in-line.

To use the fragments in RAML you have to include the exact path(copy the path) of that fragment you want to use as shown below  
Option 3 is the correct as correct syntax is examples: !include examples/StudentExample.raml

#### NEW QUESTION # 227

Refer to the exhibits.

```
<flow name="custName" doc:id="bcb3c3ba-7ff3-469a-a38f-026be38282ba" >
  <http:listener doc:name="Listener" config-ref="HTTP Listener config" path="/Log"/>
  <set-variable value="#[{ firstName: 'Madhav', LastName: 'Joshi'}]"
    doc:name="customer" to="{ firstName: 'Madhav', LastName: 'Joshi'}" variableName="customer"/>
  <logger level="INFO" doc:name="firstName" message="?????"/>
</flow>
```

Set payload transformer is set the firstName and lastName of the customer as shown in below images.

What is the correct Dataweave expression which can be added in message attribute of a Logger activity to access firstName (which in this case is Madhav) from the incoming event?

- A. vars."customer"."firstName"
- B. firstName
- C. customer.firstName
- D. vars."customer.firstName"

**Answer: A**

Explanation:

Correct answer is vars."customer"."firstName"

Please note that you can also access firstName using this syntax vars.customer.firstName.
