Sharing-and-Visibility-Architect Demotesten, Sharing-and-Visibility-Architect Online Prüfung

Sie können jetzt Salesforce Sharing-and-Visibility-Architect Zertifikat erhalten. Unser EchteFrage bietet die neue Version von Salesforce Sharing-and-Visibility-Architect Prüfung. Sie brauchen nicht mehr, die neuesten Schulungsunterlagen von Salesforce Sharing-and-Visibility-Architect zu suchen. Weil Sie die besten Schulungsunterlagen von Salesforce Sharing-and-Visibility-Architect gefunden haben. Benutzen Sie beruhigt unsere Sharing-and-Visibility-Architect Schulungsunterlagen. Sie werden sicher die Salesforce Sharing-and-Visibility-Architect Zertifizierungsprüfung bestehen.

Salesforce Certified Sharing and Visibility Architect Sharing-and-Visibility-Architect Prüfungsfragen mit Lösungen (Q47-Q52):

47. Frage

Universal Containers has implemented Customer Community with Customer Community Plus licenses for its distributors. Some distributors requested granting specific community users (agents) to view cases submitted by other agents of the same distributor. Which feature only supports these requirements?

- A. Delegate external user
- B. Partner super user

- C. Permission set to grant community admin permission

Antwort: B

Begründung:

The Partner Super User feature allows certain community users to access records owned by other users within the same account. This feature is ideal for distributors needing some agents to view cases submitted by others within their organization. It provides broader access to records that are normally restricted by default sharing rules while ensuring the access scope remains confined to users linked by the same account.

* Option A: Granting community admin permission through permission sets is not supported for community users; this is an admin-level feature.

* Option B: Delegating external users allows managing other users, but it doesn't meet the requirement to share case visibility among users of the same account.

* Option C (Correct): Partner Super User enables the required sharing while adhering to the community's sharing model.

References:

* Partner Super User Access

48. Frage

Universal Containers implemented Sales Cloud and requested that sales agents have access to products and prices the company sells, and to be able to create opportunities for its customers.

What should the organization-wide defaults be for pricebook?

- A. View
- **B. Use**
- C. Public Read-Only

Antwort: B

Begründung:

The organization-wide default (OWD) for Pricebook should be set to Use to allow sales agents to view pricebooks and their products, as well as to select a pricebook when creating Opportunities. The Use access enables users to add products from the pricebook to their opportunities while preventing unauthorized changes to the pricebook or its entries. Setting the OWD to Public Read-Only or View could provide unnecessary access or restrict essential functionality, such as associating products with opportunities. (developer.salesforce.com)

49. Frage

Universal Containers (UC) works with a dealer network to sell their products. There are approximately 5,000 dealers that do business with UC and UC has purchased a Partner Community to interact with each of their dealers on Opportunities. Each dealer is structured so that there are a group of managers who will oversee a larger team of agents. UC would like to set the Organization-Wide Defaults to Private for the Opportunity object, both internally and externally. Within each dealer, there are a few agents called Lead Agents who should be able to see the Opportunities for all of the other Agents at the dealer. What is the optimal solution for an Architect to recommend?

- A. Create a Sharing Rule to share opportunities to the owner's manager's role and below.
- **B. Grant Super User access to the Lead Agents as part of the Community user setup.**
- C. Build an Apex Managed Sharing rule that will assign specific Opportunities to Lead Agents.
- D. Add a Sharing Set that shares Opportunities to the Lead Agent based on the Lead Agents Account.

Antwort: B

Begründung:

Explanation

The optimal solution for an architect to recommend is to grant super user access to the lead agents as part of the community user setup. Super user access allows community users to access records that they do not own within their account or role hierarchy. This way, the lead agents can see the opportunities for all of the other agents at the dealer without changing the organization-wide defaults or creating any sharing rules

50. Frage

An External Object is created to show Invoices from an external accounting system. When viewing the External Object, a user should only access invoice records the user is authorized to see.

What two actions are required to achieve the above requirement? Choose 2 answers

- A. Grant access to the External Object to only the Account Manager profile.
- **B. Restrict access to data in the accounting system.**
- C. Create an owner based sharing rule to grant visibility to the Invoice object.
- **D. Setup External Object to use OAuth to connect to the Accounting system.**

Antwort: B,D

Begründung:

Explanation

The two actions that are required to achieve the requirement are setting up External Object to use OAuth to connect to the Accounting system and restricting access to data in the accounting system. OAuth is an authentication protocol that allows Salesforce to securely access data from an external system without storing the username and password of the external system user³. Restricting access to data in the accounting system is a way to ensure that only authorized users can view the invoice records from the external source. Creating an owner based sharing rule to grant visibility to the Invoice object and granting access to the External Object to only the Account Manager profile are not actions that can ensure that a user only accesses invoice records the user is authorized to see.

51. Frage

A developer at Universal Container is building an integration within a managed package for their internal org that requires login to an external system. The end point requires basic authentication. The Architect would like to ensure that the username and password are managed securely. Which three options should the Architect recommend to secure the credentials?

- **A. Store the credentials in protected custom settings that are used in the apex callout**
- B. Store the credentials in a custom object using encrypted fields
- **C. Store the credentials in named credentials that are used in the apex callout**
- D. Store the credentials in the apex code, which will not be available to non-admins
- **E. Store the credentials in protected custom metadata that are used in the apex callout**

Antwort: A,C,E

Begründung:

Explanation

Named Credentials, Protected Custom Metadata, and Protected Custom Settings are three options to secure the credentials for the external system. They allow the developer to store the credentials in a secure way that is not exposed to other users or packages. Storing the credentials in a custom object using encrypted fields or in the apex code are not secure options

52. Frage

.....

Die Salesforce Sharing-and-Visibility-Architect Zertifizierungsprüfung ist eine der beliebten und wichtigen Prüfung in der IT-Branche. Wir haben die besten Lernhilfe und den besten Online-Service. Wir bieten den IT-Fachleuten eine Abkürzung. Die online Tests zur Salesforce Sharing-and-Visibility-Architect Zertifizierungsprüfung von EchteFrage enthalten viele Prüfungsinhalte und Antworten, die Sie wollen. Wenn Sie die Simulationsprüfung von EchteFrage bestehen, dann finden Sie, dass EchteFrage bietet genau was, was Sie wollen und dass Sie sich gut auf die Salesforce Sharing-and-Visibility-Architect Prüfung vorbereiten können.
