

Sample Materials 1z0-1093-25 All-in-One Exam Guide

**SAVE TIME & QUICKLY PREPARE
WITH REAL QUESTIONS**

P.S. Free & New 1z0-1093-25 dumps are available on Google Drive shared by Real4Prep: <https://drive.google.com/open?id=1PqiYtLvUqZCcyR0xhJWnkVywCaANxh2>

Our 1z0-1093-25 study questions will update frequently to guarantee that you can get enough test banks and follow the trend in the theory and the practice. That is to say, our 1z0-1093-25 training materials boost many advantages and to gain a better understanding of our 1z0-1093-25 Guide Torrent. It is very worthy for you to buy our 1z0-1093-25 practice guide and please trust us. If you still can't fully believe us, please read the introduction of the features and the functions of our 1z0-1093-25 learning questions.

Oracle 1z0-1093-25 Exam Syllabus Topics:

Topic	Details
Topic 1	Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle's Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.
Topic 2	Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.
Topic 3	MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle's high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.
Topic 4	Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.
Topic 5	NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle's NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.

100% Pass Quiz 2025 Efficient Oracle 1z0-1093-25: Oracle Cloud Database Services 2025 Professional Reliable Real Exam

Dear candidates, pass your test with our accurate & updated 1z0-1093-25 training tools. As we all know, the well preparation will play an important effect in the 1z0-1093-25 actual test. Now, take our 1z0-1093-25 as your study material, and prepare with

careful, then you will pass successful. If you really want to choose our Oracle 1z0-1093-25 PDF torrents, we will give you the reasonable price and some discounts are available. What's more, you will enjoy one year free update after purchase of 1z0-1093-25 practice cram.

Oracle Cloud Database Services 2025 Professional Sample Questions (Q78-Q83):

NEW QUESTION # 78

Which two statements are accurate regarding the placement of VM Clusters within an Exadata Cloud Infrastructure?

- A. VM Clusters can span multiple Exadata Cloud Infrastructures, providing a single, unified database environment.
- B. Each VM Cluster must be associated with its own dedicated VCN, isolating network traffic between clusters.
- C. Only one VM Cluster can exist within an Exadata Cloud Infrastructure.
- **D. Multiple VM Clusters can be created within a single Exadata Cloud Infrastructure, allowing for workload isolation.**
- **E. VM Clusters within the same Exadata Infrastructure can share a single VCN, simplifying network management.**

Answer: D,E

Explanation:

B: Multiple VM Clusters within a single Exadata Infrastructure:

- * Multiple clusters can coexist, each isolated for specific workloads.
- * Supports resource optimization and isolation.

E: Sharing a single VCN:

- * VM Clusters within the same Exadata Infrastructure can be configured to use the same Virtual Cloud Network (VCN), streamlining network management.

Why the other options are incorrect:

- * A. Only one VM Cluster: Incorrect as multiple clusters are supported.
- * C. Spanning multiple infrastructures: VM Clusters do not span Exadata Infrastructures; they are confined to a single infrastructure.
- * D. Dedicated VCN for each cluster: Unnecessary, as clusters can share a VCN.

NEW QUESTION # 79

When considering autoscaling for provisioned throughput in NoSQL Database Cloud Service, which metric is LEAST relevant for determining when to scale up the capacity units?

- **A. CPU utilization of the compute instances hosting the database.**
- B. Latency of read and write operations.
- C. Number of rejected write requests due to insufficient WCUs.
- D. Number of rejected read requests due to insufficient RCUs.

Answer: A

Explanation:

A: CPU utilization of the compute instances hosting the database:

- * Autoscaling in NoSQL Database Cloud Service primarily focuses on RCUs (Read Capacity Units) and WCUs (Write Capacity Units).

- * The objective is to dynamically adjust capacity based on query workload, not on CPU utilization.

- * Even if CPU usage is high, it might not necessarily indicate that the capacity units are inadequate.

Why the other options are more relevant:

- * B. Rejected read requests (RCUs): Direct indicator that read capacity is insufficient, requiring scaling.
- * C. Rejected write requests (WCUs): Indicates that the write throughput is inadequate, necessitating scaling.
- * D. Latency of read and write operations: Increased latency often points to under-provisioned throughput.

NEW QUESTION # 80

You are tasked with checking the status of the Exadata Database Service (ExaDB) components using the dcli utility. You need to gather information about the health and status of the database servers and storage cells across the ExaDB infrastructure. Which dcli command, combined with appropriate commands run across the nodes, will provide the most comprehensive overview?

- A. `dcli -g all "list status"`

- B. `dcli -g cell_group "list cell attributes name, status, metriccurrent"`
- C. `dcli -g cell_group "list cell attributes name, status"` combined with `dcli -g dbnodes "srvctl status database -d dbname"`
- D. `dcli -g dbnodes "list dbnodes"`

Answer: C

Explanation:

A: `dcli -g cell_group "list cell attributes name, status"` combined with `dcli -g dbnodes "srvctl status database -d dbname"` dcli Utility:

* dcli(Distributed Command Line Interface) allows you to run commands on multiple nodes simultaneously.

* cell_group: A group configuration file listing all storage cells.

* dbnodes: A group configuration file listing all database nodes.

Commands Explanation:

* `dcli -g cell_group "list cell attributes name, status"`:

* Retrieves the name and current status of each storage cell.

* `dcli -g dbnodes "srvctl status database -d dbname"`:

* Checks the status of the database instances on the compute nodes.

* Combining these commands provides a complete picture of both storage and compute components.

Why the other options are incorrect:

* B. Including metriccurrent:Produces excessive output, not suitable for a quick health check.

* C. Listing dbnodes only:Insufficient as it lacks storage cell status.

* D. `dcli -g all "list status"`:Invalid syntax and lacks specificity.

NEW QUESTION # 81

Which statement accurately describes the function of the HeatWave service in relation to a standard MySQL database?

- A. HeatWave is a clustering solution, where a single MySQL instance is split into multiple parts.
- B. HeatWave provides an in-memory, massively parallel query accelerator to MySQL, improving analytical query performance.
- C. HeatWave acts as a caching layer in front of MySQL, speeding up access to frequently accessed data.
- D. HeatWave is a standalone database system that replaces MySQL, offering enhanced security features.
- E. HeatWave is a specialized version of MySQL designed solely for transactional workloads, optimized for high concurrency.

Answer: B

Explanation:

HeatWave as a Query Accelerator:

HeatWave enhances theMySQL Database Serviceby providing anin-memory, massively parallel query accelerator. It is specifically designed to speed upanalytical (OLAP) queries, making them run significantly faster compared to using MySQL alone.

* The system stores data in acolumnar formatand processes it in memory, utilizingdistributed, parallel processingto achieve high performance.

* Unlike traditional MySQL setups, HeatWave canexecute complex analytical workloadsefficiently.

Why the other options are incorrect:

* A:HeatWave is not a standalone database but an extension of MySQL.

* C:It is optimized foranalytical workloads, not transactional.

* D:It is more than just a caching layer; it actively processes queries.

* E:HeatWave clusters do not split MySQL instances but enhance query processing.

NEW QUESTION # 82

You need to implement a backup and recovery strategy for your MySQL HeatWave Database System. What is the recommended method for backing up and restoring your HeatWave cluster?

- A. Manually copying the data files from the HeatWave cluster's storage.
- B. Relying solely on MySQL replication to another MySQL instance.
- C. Utilizing OCI Database backups, which include both the MySQL Database System and the HeatWave cluster.
- D. Using the MySQL Enterprise Backup tool directly on the HeatWave nodes.
- E. Using the OCI Object Storage service for storing manual database dumps.

Answer: C

Explanation:

C: Utilizing OCI Database backups:

- * Integrated with Oracle Cloud Infrastructure (OCI), providing consistent and complete backups.
- * Supports both the MySQL Database System and the HeatWave cluster, ensuring data integrity.
- * Automates backup scheduling and retention policies.
- * Facilitates easy restoration in case of data loss or corruption.

Why the other options are incorrect:

- * A. Manual copying: Prone to errors and lacks consistency.
- * B. Manual dumps to Object Storage: Labor-intensive and not automated.
- * D. MySQL replication: Suitable for high availability, but not a substitute for regular backups.
- * E. MySQL Enterprise Backup on nodes: Complex and not designed for HeatWave's distributed environment.
