Pass Guaranteed 2025 Fortinet NSE7_LED-7.0: Fortinet NSE 7 - LAN Edge 7.0 –High Pass-Rate Latest Exam Bootcamp

Are you worried about insufficient time to prepare the exam? Do you have a scientific learning plan? Maybe you have set a series of to-do list, but it's hard to put into practice for there are always unexpected changes during the NSE7_LED-7.0 exam. Here we recommend our NSE7_LED-7.0 test prep to you. With innovative science and technology, our study materials have grown into a powerful and favorable product that brings great benefits to all customers. Under the support of our NSE7_LED-7.0 Study Materials, passing the NSE7_LED-7.0 exam won't be an unreachable mission.

Fortinet NSE 7 - LAN Edge 7.0 Sample Questions (Q42-Q47):

NEW QUESTION # 42

Refer to the exhibits.

Exhibit

SSL-VPN Settings

Connection Settings ⓘ

Enable SSL-VPN ☒

Listen on Interface(s)

Listen on Port

Server Certificate

Redirect HTTP to SSL-VPN ☒

Restrict Access

Idle Logout ☒

Inactive For Seconds

Require Client Certificate ☒

Web mode access will be listening at https://100.64.0.254:10443

Examine the debug output and the SSL VPN configuration shown in the exhibits.

Exhibit

```
FortiGate # diagnose debug application fnband -1
Debug messages will be on for 30 minutes.

FortiGate # diagnose debug enable

FortiGate # [2341] handle_req-Xcvt auth_cert req id=1288058918, len=1104, opt=0

```

An administrator has configured SSL VPN on FortiGate. To improve security, the administrator enabled Required Client Certificate on the SSL VPN configuration page. However, a user is unable to successfully authenticate to SSL VPN. Which configuration change should the administrator make to fix the problem?

- A. Set the user certificate as the Server Certificate on the SSL VPN configuration page.
- B. Import the CA that signed the SSL VPN Server Certificate to FortiGate.
- C. Enable Redirect HTTP to SSL-VPN on the SSL VPN configuration page.
- **D. Import the CA that signed the user certificate to FortiGate.**

Answer: D

NEW QUESTION # 43

Which FortiSwitch VLANs are automatically created on FortiGate when the first FortiSwitch device is discovered?

- A. default quarantine rspan voice video and nac_segment
- B. access, quarantine, rspan, voice, video, and onboarding

- C. default quarantine, rspan voice video onboarding and nac_segment
- D. fortilink. quarantine erspan voice video and onboarding

Answer: C

Explanation:

Based on LAN Edge 7.0 Study Guide page 217 When FortiGate discovers the first switch, it automatically adds to its configuration some settings that are default, quarantine, rspan, voice, video, onboarding, and nac_segment

NEW QUESTION # 44

Refer to the exhibit

```
config vpn certificate ocsf-server
  edit "FAC"
    set url "http://10.0.1.150:2560"
    set cert "CA_Cert_1"
    set unavail-action revoke
  next
end
config vpn certificate setting
  set ocsf-status enable
  set ocsf-option server
  set ocsf-default-server "FAC"
  set strict-ocsf-check enable
end
config user peer
  edit "student"
    set ca "CA_Cert_1"
  next
end
```

Examine the sections of the configuration shown in the output

What action will FortiGate take when verifying the student certificate through OCSF?

- A. Reject the student certificate if the OCSF server replies that the student certificate status is unknown
- B. Not verify the OCSF server certificate
- C. Consider the student certificate status as valid if the OCSF server is unreachable
- D. Use the OCSF URL included in the student certificate to verify the student certificate

Answer: A

NEW QUESTION # 45

A wireless network in a school provides guest access using a captive portal to allow unregistered users to self-register and access the network. The administrator is requested to update the existing configuration to provide captive portal authentication through a secure connection (HTTPS). Which two changes must the administrator make to enforce HTTPS authentication? (Choose two >

- A. Disable HTTP administrative access on the guest SSID to enforce HTTPS connection
- B. Enable HTTP redirect in the user authentication settings
- C. Create a new SSID with the HTTPS captive portal URL
- D. Update the captive portal URL to use HTTPS on FortiGate and FortiAuthenticator

Answer: B,D

Explanation:

Explanation

According to the FortiGate Administration Guide, "To enable HTTPS authentication, you must enable HTTP redirect in the user authentication settings. This redirects HTTP requests to HTTPS. You must also update the captive portal URL to use HTTPS on both FortiGate and FortiAuthenticator." Therefore, options B and D are true because they describe the changes that the administrator must make to enforce HTTPS authentication for the captive portal. Option A is false because creating a new SSID with the HTTPS captive portal URL is not required, as the existing SSID can be updated with the new URL. Option C is false because disabling HTTP administrative access on the guest SSID will not enforce HTTPS connection, but rather block HTTP connection.

NEW QUESTION # 46

You are investigating a report of poor wireless performance in a network that you manage. The issue is related to an AP interface in the 5 GHz range. You are monitoring the channel utilization over time.

What is the recommended maximum utilization value that an interface should not exceed?

- A. 65%
- B. 95%
- C. 85%
- D. 75%

Answer: A

Explanation:

Explanation

According to the FortiAP Configuration Guide, "Channel utilization measures how busy a channel is over a given period of time. It includes both Wi-Fi and non-Wi-Fi interference sources. A high channel utilization indicates a congested channel and can result in poor wireless performance. The recommended maximum utilization value that an interface should not exceed is 65%." Therefore, option D is true because it gives the recommended maximum utilization value for an interface in the 5 GHz range. Options A, B, and C are false because they give higher utilization values that can cause poor wireless performance.
