

SAP C-BW4H-2505 Reliable Test Voucher & C-BW4H-2505 Latest Exam Online

Test Labs

With "reliable credit" as the soul of our C_BRSOM_2020 study tool, "utmost service consciousness" as the management philosophy, we endeavor to provide customers with high quality service. Our customer service staff, who are willing to be your little helper and answer your any questions about our C_BRSOM_2020 qualification test, fully implement the service principle of customer-oriented service on our [C_BRSOM_2020 Exam Questions](#). Any puzzle about our C_BRSOM_2020 test torrent will receive timely and effective response, just leave a message on our official website or send us an e-mail for our C_BRSOM_2020 study guide.

SAP C_BRSOM_2020 Exam Syllabus Topics:

Topic	Details
Topic 1	- Describe the Billing and Revenue Innovation Management Solution (BRIM) components - Master Data (Business Partner, Contract Account and Product Master Data)
Topic 2	- Explain the BRIM Processes starting from Provider Order, Rate Usage, Run Dunning - Integration to CC - Integration to CI and SAP Fiori
Topic 3	- Explain integration aspects within the SAP BRIM architecture (flow of data objects) - Material and the need for the BRIM Solution
Topic 4	- Describe the creation and change processes of Subscription Contract - Explain the data objects Business Partner, Subscription Order - Contract
Topic 5	- Partner Agreement, Sharing Contract, Master Agreement, and Solution Quotation - Data objects, integration technology and replication of the contract within BRIM

SAP Certified Application Associate - SAP Billing and Revenue Innovation Mgmt. - Subscription Order Management Sample Questions (Q63-Q68):

NEW QUESTION # 63

Which business partner role is required to trigger the business partner replication from SAP S/4HANA to SAP Convergent Charging?

- A. Service Recipient
- B. Sold-to-Party
- C. Contract partner
- D. FI Customer

Answer: C

NEW QUESTION # 64

Which Allowance possibilities do Allowance Definition groups offer for creating an allowance in SAP Convergent Charging? Note: There are 3 correct answers to this question.

Free PDF Quiz Marvelous SAP Reliable C_BRSOM_2020 Exam Voucher

It is very convenient for all people to use the C-BW4H-2505 study materials from our company. Our study materials will help a lot of people to solve many problems if they buy our products. The online version of C-BW4H-2505 study materials from our company is not limited to any equipment, which means you can apply our study materials to all electronic equipment, including the telephone, computer and so on. So the online version of the C-BW4H-2505 Study Materials from our company will be very useful for you to prepare for your exam. We believe that our C-BW4H-2505 study materials will be a good choice for you.

SAP C-BW4H-2505 Exam Syllabus Topics:

Topic	Details
Topic 1	SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.
Topic 2	- SAP BW 4HANA Data Flow: This section of the exam measures the practical ability of SAP Consultants to load data within the SAP BW 4HANA environment. It assesses familiarity with data movement and transformation processes across different layers of the system.

Topic 3	• Data Acquisition into SAP BW • 4HANA: This section tests how Data Engineers manage data integration into SAP BW • 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.
Topic 4	• Data Acquisition into SAP HANA: This section evaluates the capacity of SAP Consultants to integrate various data sources into SAP HANA. It assesses their ability to understand different ingestion techniques and ensure data accessibility for processing.
Topic 5	• SAP BW • 4HANA Modeling: This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW • 4HANA. It focuses on designing scalable, high-performing data models.
Topic 6	• InfoObjects and InfoProviders: This section tests the knowledge of Data Engineers in working with InfoObjects and InfoProviders in SAP BW • 4HANA. It involves handling data structures used for organizing, storing, and accessing analytical data.
Topic 7	• SAP BW • 4HANA Project and the Modeling Process: This section of the exam assesses how Data Engineers guide and contribute to SAP BW • 4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.
Topic 8	• Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.

Free PDF 2025 C-BW4H-2505: Perfect SAP Certified Associate - Data Engineer - SAP BW/4HANA Reliable Test Voucher

If you are interested in purchasing valid and professional test prep materials, our C-BW4H-2505 exam questions will be our wise choice. To know our questions details and format we provide free PDF demo of our C-BW4H-2505 exam questions for your reference before purchasing. You will have a better understanding for your products. You will find our C-BW4H-2505 Exam Guide torrent is accurate and helpful and then you will purchase our C-BW4H-2505 training braindump happily. We provide free demo of C-BW4H-2505 study guide download before purchasing.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q59-Q64):

NEW QUESTION # 59

For which requirements do you suggest an SAP HANA modeling focus rather than an focus? Note: There are 2 correct answers to this question.

- A. Reporting on a harmonized set of master data
- B. Leveraging SQL in-house knowledge
- C. Finding the best match using a fuzzy search
- D. Loading snapshots or deltas from different sources on a periodic basis

Answer: B,C

NEW QUESTION # 60

Which modeling decisions may have side effects on runtime performance? Note: There are 3 correct answers to this question.

- A. Include a characteristic from the underlying DataMart DataStore Object in the CompositeProvider instead of a navigation attribute.
- B. Use a transitive attribute instead of an attribute that is directly assigned to a characteristic.
- C. Move a characteristic within a DataMart DataStore object to a different group.
- D. Uncheck the "Write change log" property for a Standard DataStore Object.
- E. Change a time-independent attribute of a characteristic to a time-dependent attribute.

Answer: A,B,D

Explanation:

When modeling data in SAP BW/4HANA, certain decisions can have significant side effects on runtime performance. Let's analyze each option:

* Option A: Use a transitive attribute instead of an attribute that is directly assigned to a characteristic.

Transitive attributes are derived attributes that depend on other attributes in the data model. Using a transitive attribute instead of a directly assigned attribute introduces additional complexity during query execution because the system must calculate the value dynamically based on the underlying relationships. This can lead to slower query performance, especially for large datasets.

* Option B: Uncheck the "Write change log" property for a Standard DataStore Object.

Disabling the "Write change log" property improves performance rather than degrading it. By not writing changes to the change log, the system reduces the overhead associated with tracking historical data. Therefore, this decision does not negatively impact runtime performance.

* Option C: Move a characteristic within a DataMart DataStore object to a different group. Moving a characteristic to a different group within a DataMart DataStore Object primarily affects the logical organization of data but does not directly impact runtime performance. The physical storage and query execution remain unaffected by such changes.

* Option D: Change a time-independent attribute of a characteristic to a time-dependent attribute.

Converting a time-independent attribute to a time-dependent one introduces additional complexity into the data model. Time-dependent attributes require the system to manage multiple versions of the attribute over time, which increases the volume of data and the computational effort required for queries. This can significantly degrade runtime performance, especially for queries involving large datasets or frequent updates.

* Option E: Include a characteristic from the underlying DataMart DataStore Object in the CompositeProvider instead of a navigation attribute. Including a characteristic directly from the underlying DataMart DataStore Object in the CompositeProvider can improve performance compared to using a navigation attribute. Navigation attributes require additional joins during query execution, which can slow down performance. However, if the question implies replacing a navigation attribute with a direct characteristic, this decision can have positive performance implications. Conversely, if the reverse is implied (using navigation attributes instead of direct characteristics), it would degrade performance.

References: SAP BW/4HANA Modeling Guide: Explains the impact of transitive attributes, time-dependent attributes, and navigation attributes on query performance.

SAP Help Portal: Provides detailed documentation on best practices for optimizing data models in SAP BW/4HANA.

SAP Community Blogs: Experts often discuss the performance implications of various modeling decisions in real-world scenarios.

In summary, options A, D, and E involve modeling decisions that can negatively impact runtime performance due to increased computational complexity or additional joins during query execution.

NEW QUESTION # 61

Which external hierarchy properties can be changed in the query definition? Note: There are 3 correct answers to this question.

- A. Position of child nodes
- B. Sort direction
- C. Exp to level
- D. Display text nodes
- E. Time dependency

Answer: A,B,C

NEW QUESTION # 62

For a BW query you want to have the first month of the current quarter as a default value for an input-ready BW variable for the characteristic 0CALTHMONTH.

Which processing type do you use?

- A. Manual Input with offset value

- B. Customer Exit
- C. Manual Input with default value
- D. Replacement Path

Answer: A

Explanation:

In SAP BW (Business Warehouse) and SAP Data Engineer - Data Fabric, variables are used in queries to allow dynamic input or automatic determination of values for characteristics like 0CALMONTH (calendar month). The processing type of a variable determines how its value is derived or set. For this question, the goal is to set the first month of the current quarter as the default value for an input-ready BW variable.

* A. Manual Input with offset value

* This processing type allows you to define a default value for the variable based on an offset calculation relative to the current date or other reference points.

* In this case, you can configure the variable to calculate the first month of the current quarter dynamically using an offset. For example:

* If the current month is April (which belongs to Q2), the variable will automatically calculate January (the first month of Q2).

* This is achieved by leveraging the system's ability to determine the current quarter and then applying an offset to identify the first month of that quarter.

: In SAP BW Query Designer, the "Manual Input with Offset Value" option is commonly used for time-dependent characteristics like 0CALMONTH to derive dynamic default values.

Incorrect Options: B. Replacement Path

The Replacement Path processing type is used when the variable's value is derived from another object, such as a query, InfoObject, or hierarchy.

While Replacement Path is powerful for linking variables to other data sources, it is not suitable for calculating the first month of the current quarter dynamically based on the system date.

Reference: Replacement Path is more appropriate for scenarios where the value is fetched from a predefined source rather than calculated dynamically.

C). Customer Exit

A Customer Exit allows you to implement custom ABAP code to determine the variable's value. While this approach could technically be used to calculate the first month of the current quarter, it is unnecessarily complex for this requirement.

Using a Customer Exit would require additional development effort, whereas the "Manual Input with Offset Value" option provides a simpler, out-of-the-box solution.

Reference: Customer Exits are typically reserved for highly customized or complex logic that cannot be achieved through standard processing types.

D). Manual Input with default value

The "Manual Input with Default Value" processing type allows you to specify a static default value for the variable. However, this option does not support dynamic calculations based on the current date or quarter.

Since the requirement is to dynamically determine the first month of the current quarter, this option is not suitable.

Reference: Static default values are useful for fixed inputs but lack the flexibility needed for time-dependent calculations.

Conclusion: The correct answer is A. Manual Input with offset value, as it provides the necessary functionality to dynamically calculate the first month of the current quarter based on the system date. This approach is both efficient and straightforward, leveraging SAP BW's built-in capabilities without requiring additional customization or development.

NEW QUESTION # 63

Which objects in SAP BW/4HANA allow you to use both fields and InfoObjects in their definition? Note: There are 3 correct answers to this question.

- A. Hierarchy
- B. DataStore Object (advanced)
- C. Composite Provider
- D. InfoObject type Key Figure
- E. Open ODS View

Answer: B,C,E

Explanation:

In SAP BW/4HANA, various objects allow you to use fields and InfoObjects in their definition. Fields refer to technical column names in the underlying data source, while InfoObjects are semantic metadata objects that provide business context to the data.

Below is a detailed explanation of the correct answers:

* Explanation: Hierarchies in SAP BW/4HANA are used to define hierarchical relationships for characteristics (e.g., organizational structures or product hierarchies). They rely on characteristics (InfoObjects) but do not directly involve fields from the underlying data source. Therefore, hierarchies cannot use both fields and InfoObjects in their definition.

* Hierarchies are purely metadata-driven and do not interact with technical fields.

Option B: InfoObject type Key FigureExplanation: Key Figures are a type of InfoObject used to store measurable values (e.g., revenue, quantity). While they can be used in various BW objects, they are not defined using both fields and InfoObjects. Key Figures are standalone metadata objects and do not combine fields from the underlying data source with InfoObjects.

Reference: Key Figures are part of the semantic layer and do not involve technical fields in their definition.

Option C: Open ODS ViewExplanation: Open ODS Views allow you to create virtual data models by directly accessing underlying database tables or views. They can use both fields (technical column names) from the source table and InfoObjects (semantic metadata) to define the structure of the view. This flexibility makes Open ODS Views a powerful tool for integrating raw data with BW semantics.

Reference: In SAP BW/4HANA, Open ODS Views are commonly used to expose external data sources while leveraging BW's metadata capabilities. They align with SAP Data Engineer - Data Fabric principles by enabling seamless integration of raw and semantic data.

Option D: DataStore Object (advanced)Explanation: Advanced DataStore Objects (aDSOs) are versatile storage objects in SAP BW/4HANA that support both reporting and data staging. They allow you to define fields (technical column names) and InfoObjects (semantic metadata) in their structure. This dual capability enables aDSOs to serve as a bridge between raw data and BW's semantic layer.

Reference: aDSOs are central to SAP BW/4HANA's data modeling approach, providing flexibility to use both fields and InfoObjects. They are widely used in SAP Data Engineer - Data Fabric scenarios for data harmonization and reporting.

Option E: Composite ProviderExplanation: Composite Providers combine data from multiple sources, such as InfoProviders, Open ODS Views, and external sources. They allow you to use both fields (from underlying data sources) and InfoObjects (from BW metadata) in their definition. This makes Composite Providers ideal for creating unified views of data across diverse sources.

Reference: Composite Providers are a key component of SAP BW/4HANA's virtual data modeling capabilities. They enable flexible data integration while maintaining compatibility with BW's semantic layer, aligning with SAP Data Engineer - Data Fabric principles.

SummaryThe following objects in SAP BW/4HANA allow you to use both fields and InfoObjects in their definition:

Open ODS View: Combines technical fields from the source with BW InfoObjects for semantic enrichment.

DataStore Object (advanced): Supports both raw fields and semantic InfoObjects for flexible data modeling.

Composite Provider: Integrates fields from various sources with BW InfoObjects to create unified data views.

These objects reflect SAP BW/4HANA's ability to seamlessly integrate raw data with semantic metadata, supporting efficient data engineering and analytics within the SAP Data Engineer - Data Fabric framework.

NEW QUESTION # 64

.....

Our C-BW4H-2505 free demo provides you with the free renewal in one year so that you can keep track of the latest points happening in the world. As the questions of exams of our C-BW4H-2505 exam torrent are more or less involved with heated issues and customers who prepare for the exams must haven't enough time to keep trace of exams all day long, our C-BW4H-2505 Practice Test can serve as a conducive tool for you make up for those hot points you have ignored. Therefore, you will have more confidence in passing the exam, which will certainly increase your rate to pass the C-BW4H-2505 exam.
