SAP C-C4H62-2408 Questions - Perfect Exam Preparation [2025]

As one of the most professional dealer of C-C4H62-2408 practice questions, we have connection with all academic institutions in this line with proficient researchers of the knowledge related with the C-C4H62-2408 exam materials to meet your tastes and needs,

please feel free to choose. And we have three versions of C-C4H62-2408 training guide: the PDF, Software and APP online for you. You can choose the one which you like best.

SAP Certified Associate - Implementation Consultant - SAP Customer Data Cloud Sample Questions (Q44-Q49):

NEW QUESTION # 44

You want a dataflow to run regularly.

What are the two best-practice options to configure this?

Note: There are 2 correct answers to this question.

- A. Use the `idx.createScheduling` endpoint via an API call.
- **B. Use the dataflow scheduler of the Console and add a schedule.**
- **C. Use extensions and schedule the dataflow using an extension endpoint.**
- D. Use the `idx.setDataflow` endpoint via an API call.

Answer: B,C

Explanation:

To configure a dataflow to run regularly, SAP recommends two best-practice options:

* Option A: Correct. Using the dataflow scheduler in the SAP Customer Data Cloud Console is the most straightforward way to configure regular execution. You can define the schedule directly in the UI.

* Option B: Incorrect. The `idx.setDataflow` endpoint is used to update dataflow configurations, not to schedule them.

* Option C: Correct. Using extensions and scheduling the dataflow via an extension endpoint provides flexibility and allows for advanced scheduling scenarios, such as triggering the dataflow based on external events.

* Option D: Incorrect. The `idx.createScheduling` endpoint is not a valid API endpoint for scheduling dataflows.

NEW QUESTION # 45

Which of the following actions would trigger an update to the consent vault?

- **A. A user opts out of a newsletter.**
- B. A user connects their account to their social media network account
- C. A user executes a failed login attempt.
- D. A user updates their address and contact details.

Answer: A

NEW QUESTION # 46

You are editing a dataflow.

Which actions can you perform?

Note: There are 2 correct answers to this question.

- **A. Preview the schema in a datasource component.**
- **B. Use a datasource.lookup component to check if a record exists in the site.**
- C. Add a component responsible for starting the schedule of the dataflow.
- D. Add multiple Next steps to a component.

Answer: A,B

Explanation:

When editing a dataflow in SAP Customer Data Cloud, you can perform several actions to manipulate and manage data. The correct options are:

* Option A: Correct. The `datasource.lookup` component allows you to check if a record exists in the site by querying the database or other data sources. This is useful for conditional logic in your dataflow.

* Option B: Incorrect. Adding a component to start the schedule of the dataflow is not a valid action within the dataflow editor. Scheduling is configured separately outside the dataflow editor.

* Option C: Incorrect. Adding multiple "Next steps" to a single component is not supported in SAP Customer Data Cloud's dataflow editor. Each component can only have one direct "Next step."

* Option D: Correct. You can preview the schema of a data source component to understand the structure of the data being processed. This helps ensure that the dataflow is correctly configured.

NEW QUESTION # 47

Which fields can be found inside a subscription schema? Note: There are 2 correct answers to this question.

- A. acceptanceDate
- B. isEnabled
- C. isSubscribed
- D. doubleOptin

Answer: A,C

Explanation:

The subscription schema in SAP Customer Data Cloud includes fields that define the state and metadata of a subscription. The correct fields are:

* Option A: Correct. The acceptanceDate field records the date and time when the user accepted the subscription.

* Option B: Incorrect. doubleOptin is not a field in the subscription schema. Instead, it refers to a process for confirming subscriptions.

* Option C: Incorrect. isEnabled is not a standard field in the subscription schema. It may refer to whether the subscription is active, but this is represented by other fields like isSubscribed.

* Option D: Correct. The isSubscribed field indicates whether the user is currently subscribed to the service or communication.

NEW QUESTION # 48

What are the basic building blocks of Organization Management? Note: There are 3 correct answers to this question.

- A. Authorization workspace
- B. Actions
- C. Organizations workspace
- D. Assets
- E. Applications

Answer: A,C,D

NEW QUESTION # 49
