

SAP C-IBP-2502 Musterprüfungsfragen & C-IBP-2502 Testing Engine

P.S. Kostenlose 2025 SAP C-IBP-2502 Prüfungsfragen sind auf Google Drive freigegeben von ITZert verfügbar:
https://drive.google.com/open?id=1JR5eJDq3M9t_TQYrilaqHOsIYNmCID

Wir versprechen Ihnen nicht nur eine 100%-Pass-Garantie, sondern bieten Ihnen einen einjährigen kostenlosen Update-Service. Wenn Sie unvorsichtigerweise die SAP C-IBP-2502 Prüfung nicht bestehen, erstatten wir Ihnen die gesamte Summe zurück. Aber das ist doch niemals passiert. Wir garantieren, dass Sie die SAP C-IBP-2502 Prüfung 100% bestehen können. Sie können teilweise im Internet die SAP C-IBP-2502 Prüfungsfragen und Antworten von ITZert als Probe umsonst herunterladen.

SAP C-IBP-2502 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.
Thema 2	• Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.
Thema 3	• Solution Architecture & Data Integration: This exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Thema 4	• General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.
Thema 5	• Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Thema 6	• Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.

Thema 7	• Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.

SAP C-IBP-2502 Testing Engine & C-IBP-2502 Testfragen

Unsere Garantie, Die Prüfungsfragen und Antworten zu SAP C-IBP-2502 (SAP Certified Associate - SAP IBP for Supply Chain) von ITZert ist eine Garantie für eine erfolgreiche Prüfung! Bisher fiel noch keiner unserer Kandidaten durch! Falls aber jemand durch die Zertifizierungsprüfung fallen sollte, zahlen wir die 100% Material-Gebühr zurück. Wir übernehmen die volle Geld-zurück-Garantie auf Ihre Zertifizierungsprüfungen! Unsere Fragen und Antworten sind alle aus dem Fragenpool, alle sind echt und original.

SAP Certified Associate - SAP IBP for Supply Chain C-IBP-2502 Prüfungsfragen mit Lösungen (Q29-Q34):

29. Frage

You are invited to review a problem with a customer's SAP IBP Excel template performance. What areas with the biggest potential performance impact would you focus on? Note: There are 2 correct answers to this question.

- A. Number of analytics charts displaying key figures' values
- B. Excessive SAP IBP formatting in the Microsoft Excel UI
- C. Number of local members and complexity of calculation
- D. Complex calculation graphs for key figures

Antwort: B,D

Begründung:

SAP IBP Excel template performance depends on data volume, calculations, and UI rendering. Key areas impact runtime significantly, as per SAP's performance best practices.

* Option A: Excessive SAP IBP formatting in the Microsoft Excel UI This is correct. Overuse of formatting (e.g., conditional formatting, custom styles) in the Excel add-in increases rendering time, especially with large datasets, a known performance bottleneck per SAP IBP's Excel guidelines.

* Option B: Number of local members and complexity of calculation This is incorrect in this context.

Local members (ad-hoc Excel calculations) can slow individual views, but they're user-specific and not a primary template design factor compared to system-level issues.

* Option C: Complex calculation graphs for key figures This is correct. Complex calculation graphs (e.g., nested dependencies across key figures) increase processing time during refresh or planning runs, a major performance driver, per SAP IBP's calculation engine documentation.

* Option D: Number of analytics charts displaying key figures' values This is incorrect. Charts in Excel are minimal and don't significantly impact template performance compared to formatting or calculations. Chart-heavy analysis is more relevant to Analytics apps.

Thus, A and C are the biggest performance impact areas, per SAP IBP's Excel optimization advice.

30. Frage

You create a planning filter using an SAP IBP Fiori app. Which of the following objects can it be applied to?

Note: There are 2 correct answers to this question.

- A. Jobs in the Application Jobs app
- B. Supply chain graph in Supply Chain Network app
- C. Planning view templates in the SAP IBP, add-in for Microsoft Excel
- D. Compare function in the Planning Areas app

Antwort: A,C

Begründung:

Planning filters in SAP IBP, created via the Manage Planning Filters app (Fiori-based), define subsets of data (e.g., by Product, Location) for use across various applications. Their applicability depends on SAP IBP's functional scope.

* Option A: Planning view templates in the SAP IBP, add-in for Microsoft Excel This is correct.

Planning filters can be applied to planning view templates in the Excel add-in to restrict data displayed or edited (e.g., show only products in Region X). This is a core feature for planners, as per SAP IBP's Excel integration documentation.

* Option B: Jobs in the Application Jobs app This is correct. Planning filters can be parameters in application jobs (e.g., Copy Operator, Purge Data) to limit the scope of data processed (e.g., purge data for specific Locations). This is a standard capability in the Application Jobs app, per SAP IBP's job management guides.

* Option C: Compare function in the Planning Areas app This is incorrect. The Planning Areas app manages planning area configurations, and while it has a "Compare" function to analyze differences, planning filters are not applied here. Filters are for runtime data, not configuration comparison.

* Option D: Supply chain graph in Supply Chain Network app This is incorrect. The Supply Chain Network app visualizes the network (e.g., Locations, Transportation Lanes), but planning filters are not directly applied to this graph. Filters affect data views, not network visualizations.

Thus, A and B are the correct objects where planning filters can be applied, per SAP IBP's official functionality.

31. Frage

What are some of the features of the network charts in SAP Integrated Business Planning for Supply Chain?

Note: There are 2 correct answers to this question.

- A. To display the network chart, you need the Ship-From Location master data type in the planning area
- **B. You can create a network chart from the dedicated app, or use the Analytics Advanced app**
- **C. The network charts visualize relationships between warehouse, plants, customer, and supplier, for finished goods**
- D. You can create a network chart from the dedicated app, or use the Manage Analytics Stories app

Antwort: B,C

Begründung:

Network charts in SAP IBP (via the Supply Chain Network app) visualize supply chain relationships, a feature of the Control Tower module.

* Option A: To display the network chart, you need the Ship-From Location master data type in the planning area This is incorrect. The Ship-From Location is a concept (e.g., in Transportation Lanes), not a specific master data type requirement. Location and Transportation Lane data suffice.

* Option B: You can create a network chart from the dedicated app, or use the Analytics Advanced app This is correct. The Supply Chain Network app (dedicated) and Analytics Advanced app both support network chart creation, per SAP IBP's visualization documentation.

* Option C: You can create a network chart from the dedicated app, or use the Manage Analytics Stories app This is incorrect. Manage Analytics Stories creates dashboards, not network charts specifically; it's less focused on network visualization.

* Option D: The network charts visualize relationships between warehouse, plants, customer, and supplier, for finished goods This is correct. Network charts depict nodes (e.g., plants, warehouses, customers, suppliers) and edges (e.g., Transportation Lanes) for finished goods, per SAP IBP's network visualization features.

Thus, B and D are accurate features, per SAP IBP's official documentation.

32. Frage

The Planner Workspaces is an important User Interface of SAP IBP for Supply Chain. What are the value drivers to use this as a planner? Note: There are 3 correct answers to this question.

- A. It combines the data from multiple planning areas into one user interface
- **B. Application jobs can be started from this user interface**
- C. It can trigger SAP S/4HANA transactions in real time
- **D. Issues can be identified and solved with special functions**
- **E. It combines various components into one user interface**

Antwort: B,D,E

Begründung:

Planner Workspaces in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and workflows, enhancing planner productivity. Its value drivers are outlined in SAP IBP's UI documentation.

- * Option A: Issues can be identified and solved with special functions This is correct. Alerts and playbooks in Planner Workspaces help identify and resolve issues (e.g., supply shortages), a key value driver, per SAP IBP's features.
 - * Option B: It combines various components into one user interface This is correct. It integrates planning views, charts, and alerts into a single UI, streamlining workflows, a core benefit, per SAP IBP's documentation.
 - * Option C: It can trigger SAP S/4HANA transactions in real time This is incorrect. Planner Workspaces focuses on IBP planning, not real-time S/4HANA transaction execution, which requires integration tools like CI-DS.
 - * Option D: It combines the data from multiple planning areas into one user interface This is incorrect. It operates within one planning area; combining multiple areas requires separate configurations or views, not a native feature.
 - * Option E: Application jobs can be started from this user interface This is correct. Planners can trigger jobs (e.g., Copy Operator) directly from Planner Workspaces, enhancing efficiency, per SAP IBP's UI capabilities.
- Thus, A, B, and E are value drivers, per SAP IBP's official Planner Workspaces description.

33. Frage

Which planning operators can be executed in a time-series-based planning area? Note: There are 2 correct answers to this question.

- **A. Finite Heuristics**
- B. Deployment Optimizer
- **C. Constrained Forecast Run**
- D. Shelf Life Heuristics

Antwort: A,C

Begründung:

Time-series-based planning areas in SAP IBP support operators for demand, supply, and inventory planning, distinct from order-based operators.

- * Option A: Constrained Forecast Run This is correct. The Constrained Forecast Run adjusts demand forecasts based on supply constraints, a time-series operator in SAP IBP for S&OP, per official documentation.
 - * Option B: Shelf Life Heuristics This is incorrect. Shelf Life Heuristics is specific to SAP IBP for Response and Supply (order-based), not time-series planning.
 - * Option C: Finite Heuristics This is correct. Finite Heuristics plans supply respecting capacity constraints in a time-series context, a standard operator, per SAP IBP's supply planning guides.
 - * Option D: Deployment Optimizer This is incorrect. The Deployment Optimizer is an order-based operator in SAP IBP for Response and Supply, not time-series-based.
- Thus, A and C are valid time-series operators, per SAP IBP's official capabilities.

34. Frage

.....

Aufgrund der großen Übereinstimmung mit den echten SAP C-IBP-2502 Prüfungsfragen und -antworten (SAP Certified Associate - SAP IBP for Supply Chain) können wir Ihnen 100%-Pass-Garantie versprechen. Wir aktualisieren jeden Tag nach den Informationen von Prüfungsabsolventen oder Mitarbeitern aus dem Testcenter unsere Prüfungsfragen und Antworten zu SAP C-IBP-2502 Fragenpool (SAP Certified Associate - SAP IBP for Supply Chain). Wir extrahieren jeden Tag die Informationen der tatsächlichen Prüfungen und integrieren in unsere Produkte.
