## **Realistic C-SEC-2405 Latest Exam Review - Easy and Guaranteed C-SEC-2405 Exam Success**

With the rapid development of the economy, the demands of society on us are getting higher and higher. If you can have C-SEC-2405 certification, then you will be more competitive in society. We have chosen a large number of professionals to make C-SEC-2405 learning question more professional, while allowing our study materials to keep up with the times. Of course, we do it all for you to get the information you want, and you can make faster progress. You can also get help from C-SEC-2405 Exam Training professionals at any time when you encounter any problems. We can be sure that with the professional help of our C-SEC-2405 test guide you will surely get a very good experience. Good materials and methods can help you to do more with less. Choose C-SEC-2405 test guide to get you closer to success.

## **SAP Certified Associate - Security Administrator Sample Questions (Q49-Q54):**

## NEW QUESTION # 49

What use cases are available for a Local Identity Directory? Note: There are 3 correct answers to this question.

- A. Hybrid mode
- B. Merging attributes
- C. Classic use case
- D. Proxy mode
- E. S/4HANA use case

**Answer: A,C,D**

Explanation:

A Local Identity Directory in SAP Cloud Identity Services supports multiple use cases to manage user identities effectively. The Classic use case involves maintaining a standalone identity repository for user authentication and authorization, suitable for scenarios where a single, centralized directory is needed without external integration. The Hybrid mode allows the Local Identity Directory to work alongside other identity providers, enabling a mix of local and external user management, which is ideal for organizations transitioning to cloud environments while retaining on-premise systems. The Proxy mode enables the directory to act as an intermediary, forwarding authentication requests to external identity providers while maintaining local control over user attributes and policies. These use cases provide flexibility for diverse organizational needs. Merging attributes is a function of identity management but not a distinct use case, and S

/4HANA use case is not a specific term for Local Identity Directory configurations. These options ensure that SAP's identity management aligns with varying architectural and security requirements, supporting both cloud and hybrid landscapes.

## NEW QUESTION # 50

Which of the following allow you to control the assignment of table authorization groups? Note: There are 2 correct answers to this question.

- A. PRGN\_CUST
- B. V\_BRG\_54
- C. SSM\_CUST
- D. V\_DDAT\_54

**Answer: B,D**

Explanation:

In SAP systems, table authorization groups are controlled using views V\_DDAT\_54 and V\_BRG\_54.

V\_DDAT\_54 is a maintenance view that allows administrators to assign tables to authorization groups, defining which groups protect specific tables and ensuring that access is restricted to authorized users.

V\_BRG\_54 is another view used to manage table authorization groups, particularly for assigning and maintaining group definitions that link to authorization objects like S\_TABU\_DIS. These views enable granular control over table access, supporting data security and compliance. PRGN\_CUST is a customizing table for role and authorization settings, not specifically for table authorization groups, and SSM\_CUST is related to system settings, not table access control. By using V\_DDAT\_54 and V\_BRG\_54, SAP provides a structured approach to managing table authorizations, ensuring that sensitive data in tables is protected against unauthorized access while allowing efficient administration of access controls.

## NEW QUESTION # 51

Which object type is assigned to activated OData services in transaction SU24?

- A. G4BA
- B. IWSV
- C. IWSG
- D. HTTP

**Answer: B**

Explanation:

In SAP systems, activated OData services are assigned the object type IWSV (SAP Gateway Business Suite Enablement-Service) in transaction SU24. SU24 is used to maintain authorization defaults for transactions and services, and for OData services, which power SAP Fiori apps, the IWSV object type represents the service definitions required for front-end and back-end

communication. When an OData service is activated, its authorization requirements, such as the S\_SERVICE authorization object with the SRV\_NAME field, are linked to the IWSV type in SU24, ensuring that these are proposed when the service is added to a PFCG role.

The HTTP object type is not used for OData services, G4BA relates to OData V4 services, and IWSG represents service group metadata, not activated services. By associating OData services with IWSV in SU24, SAP ensures that authorization maintenance is streamlined, enabling secure and efficient access to Fiori apps while aligning with the system's authorization framework.

#### NEW QUESTION # 52

Which of the following allow you to control the assignment of table authorization groups? Note:

There are 2 correct answers to this question.

- A. PRGN\_CUST
- B. V\_BRG\_54
- C. V\_DDAT\_54
- D. SSM\_CUST

**Answer: A,B**

#### NEW QUESTION # 53

In SAP HANA Cloud, who has access to a database object?

- A. The owner and the SAP-owned users
- B. The user DBADMIN and the group owner
- C. The user SYSTEM and the creator
- D. The creator and the schema owner

**Answer: D**

Explanation:

In SAP HANA Cloud, access to a database object is granted to the creator and the schema owner. The creator, typically the user who created the object (e.g., a table or view), is automatically granted full privileges on that object, allowing them to manage and manipulate it. The schema owner, who owns the schema in which the object resides, also has access, as they have overarching control over all objects within their schema. This dual ownership model ensures that both the user responsible for creating the object and the schema's administrator can manage it, supporting flexible and secure database administration. The user DBADMIN, group owner, SAP-owned users, or SYSTEM user may have specific administrative privileges, but they are not automatically granted access to all database objects unless explicitly configured. This approach aligns with SAP HANA Cloud's security framework, ensuring that object access is tightly controlled and aligned with the principles of least privilege and ownership-based access management.

#### NEW QUESTION # 54

.....

Overall we can say that SAP Certified Associate - Security Administrator; C-SEC-2405 certification can provide you with several benefits that can assist you to advance your career and achieve your professional goals. Are you ready to gain all these personal and professional benefits? Looking for a sample, is smart and quick for SAP C-SEC-2405 Exam Dumps preparation? If your answer is yes then you do not need to go anywhere, just download Actual4Cert C-SEC-2405 Questions and start SAP C-SEC-2405 exam preparation with complete peace of mind and satisfaction.

**C-SEC-2405 Exam Online:** <https://www.actual4cert.com/C-SEC-2405-real-questions.html>
