

SAP C-SIGDA-2403 Valid Exam Pass4sure - Valid C-SIGDA-2403 Test Blueprint

DOWNLOAD the newest CramPDF C-SIGDA-2403 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1RToHD9-_c93PIvbQ4wocRwSQBeshBKP4

We are dedicated to providing our clients with the most current and accurate SAP Certified Associate - Process Data Analyst - SAP Signavio study material. That is why we provide 1 year of free C-SIGDA-2403 questions updates if the SAP certification test content changes after your purchase. With this option, our clients can confidently use the most up-to-date and dependable C-SIGDA-2403 preparatory material.

SAP C-SIGDA-2403 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Signavio Process Insights: The topic gives insights into SAP Signavio Process.
Topic 2	• SAP Signavio Process Collaboration Hub: By covering this topic, you learn how to navigate through different process information and collaborate with other business users. Lastly, the topic delves into this navigation to share feedback on process content.
Topic 3	• SiGNAL: This topic explains how to use SiGNAL as query language. It also discusses how process data and analyze it in more depth.
Topic 4	• Process Mining: Its primary focus is discussing fundamentals of process mining. Furthermore, the topic explores pointing out the basic data requirements in process mining projects.
Topic 5	• SAP Signavio Process Intelligence: To explore and analyze a data set, this section discusses creating an investigation. It also discusses revealing inefficiencies in the process.

Valid C-SIGDA-2403 Test Blueprint, Practice C-SIGDA-2403 Tests

Our C-SIGDA-2403 training guide always promise the best to service the clients. Carefully testing and producing to match the certified quality standards of C-SIGDA-2403 exam materials, we have made specific statistic researches on the C-SIGDA-2403 practice materials. And the operation system of our C-SIGDA-2403 practice materials can adapt to different consumer groups. Facts speak louder than words. Through years' efforts, our C-SIGDA-2403 exam preparation has received mass favorable reviews

because the 99% pass rate is the powerful proof of trust of the public.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q27-Q32):

NEW QUESTION # 27

What is a variant in Process Mining?

- A. A variant backtracks the process flow
- **B. A variant is a set of cases with the same sequence of events**
- C. A variant visualizes all tasks to complete the process
- D. A variant is a digital footprint of system-based events

Answer: B

Explanation:

In Process Mining, a variant represents a unique sequence of activities performed in a process, as derived from event log data. The SAP Signavio Process Intelligence Documentation clearly defines this concept:

* Exact Extract: "A process variant is a unique sequence of activities (events) that a set of cases follows.

Each variant represents a distinct path through the process, and Process Mining tools like the Variant Explorer Widget identify and visualize these paths to show how processes are executed in reality." (SAP Signavio Process Intelligence User Guide, section on "Process Variants and Variant Explorer").

* Explanation:

* Option D (A variant is a set of cases with the same sequence of events): This is correct because a variant groups all cases that follow the identical sequence of activities, allowing analysts to identify common or deviant process paths. For example, in an order-to-cash process, one variant might include "Order Created # Order Confirmed # Shipped," while another might include an additional "Order Revised" step.

* Option A (A variant is a digital footprint of system-based events) is incorrect because the digital footprint refers to the event log as a whole, not a specific variant. Variants are derived from this footprint during analysis.

* Option B (A variant visualizes all tasks to complete the process) is incorrect as variants show specific sequences, not all possible tasks. The Process Discovery Widget visualizes the overall process, not individual variants.

* Option C (A variant backtracks the process flow) is incorrect because backtracking is a function of widgets like Process Discovery, not the definition of a variant.

NEW QUESTION # 28

What is the Process Conformance Widget used for?

- A. Visualizing the performance indicators
- B. Visualizing the way tasks are performed and backtracking the process flow
- **C. Visualizing different variants against a BPMN model of a process**
- D. Visualizing the traffic through your process

Answer: C

Explanation:

The Process Conformance Widget in SAP Signavio is used for visualizing different variants of a process against a predefined BPMN model. This tool is instrumental in identifying deviations from the intended process model, highlighting areas where the actual process flow differs from the designed flow. Such insights are critical for understanding process compliance, identifying unauthorized or inefficient variations, and taking corrective actions to align actual process execution with organizational standards and expectations. It is not primarily focused on backtracking process flow, visualizing performance indicators, or monitoring traffic through the process, but rather on conformance to the modeled process. References: SAP Signavio Documentation

NEW QUESTION # 29

What is a Query?

- A. A request created by the system

- B. A request to show a data model
- C. A request to start a workflow
- D. A request for information from a database

Answer: D

Explanation:

A query in the context of SAP Signavio Process Intelligence is a fundamental concept for data retrieval. The documentation provides a clear definition:

* Exact Extract: "A query is a request for information from a database, typically written in SQL, to retrieve specific data or perform calculations based on defined criteria. In SAP Signavio Process Intelligence, queries are used to extract process data for analysis, such as case attributes or event sequences." (SAP Signavio Process Intelligence User Guide, section on "SQL Query Editor and Data Retrieval").

* Explanation:

* Option B (A request for information from a database): This is correct as a query is a structured request, often in SQL, to retrieve or manipulate data from the database underlying Process Intelligence, such as fetching cases with specific attributes.

* Option A (A request to start a workflow) is incorrect because workflows are managed in SAP Signavio Process Governance, and queries do not initiate them.

* Option C (A request to show a data model) is incorrect as displaying a data model is a configuration task, not the purpose of a query.

* Option D (A request created by the system) is incorrect because queries are user-defined or configured, not automatically generated by the system.

Reference: SAP Signavio Process Intelligence User Guide, section on "SQL Query Editor and Data Retrieval"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 4: Query Fundamentals.

NEW QUESTION # 30

What are some benefits of? Note: There are 3 correct answers to this question.

- A. Visualizes results in detailed charts
- B. Creates more in-depth process queries
- C. Visualizes different data sources
- D. Retrieves data and perform calculations
- E. Creates easily process simulations

Answer: A,B,D

NEW QUESTION # 31

What are the correct applications of a Parallel Gateway in a business process model? (Choose two)

- A. To merge concurrent flows
- B. To distribute incoming tokens to all outgoing sequences
- C. To synchronize the flow before proceeding
- D. To initiate multiple tasks at once

Answer: B,D

NEW QUESTION # 32

.....

As you know, your company will introduce new talent each year. In the face of their excellent resume, you must improve your strength to keep your position! Our C-SIGDA-2403 study questions may be able to give you some help. What you need may be an internationally-recognized C-SIGDA-2403 certificate, perhaps using the time available to complete more tasks. With our C-SIGDA-2403 study materials, you will pass the exam in the shortest possible time.
