NEW QUESTION # 33
How can you join two existing artifacts in SAP Datasphere? Note: There are 2 correct answers to this question.

- A. Create an SQL view with a JOIN operation.
- B. Create a graphical view, drag an artifact to the canvas, and the second one on top of the first one.
- C. Create a graphical view and select the Join node icon.
- D. Create an Analytic Model based on the first artifact and add the second artifact as the Used in property.

Answer: A,C

Explanation:
In SAP Datasphere, there are distinct methods for joining two existing artifacts, enabling powerful data integration. One common and intuitive approach is to create a graphical view and select the Join node icon (B). In the graphical view editor, you can drag your source artifacts (tables or views) onto the canvas, and then use the dedicated "Join" node to define the join conditions between them, visually mapping the columns and selecting the join type (e.g., inner, left outer). This method is highly visual and user-friendly. Another powerful and flexible way to join artifacts is to create an SQL view with a JOIN operation (C). For users comfortable with SQL, an SQL view allows for direct coding of complex join conditions, including various join types and advanced filtering, offering fine-grained control over the data integration logic. Both methods achieve the goal of combining data from multiple artifacts into a single result set, tailored to different user preferences and complexity requirements.
