SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q82-Q87):

NEW QUESTION # 82

Which types of values can be protected by analysis authorizations? Note: There are 2 correct answers to this question.

- A. Characteristic values
- B. Key figure values
- C. Display attribute values
- D. Hierarchy node values

Answer: A,D

Explanation:

Analysis authorizations in SAP BW/4HANA are used to restrict access to specific data based on user roles and permissions. Let's analyze each option:

* Option A: Characteristic valuesThis is correct. Analysis authorizations can protect characteristic values by restricting access to specific values of a characteristic (e.g., limiting access to certain regions, products, or customers). This is one of the primary use cases for analysis authorizations.

* Option B: Display attribute valuesThis is incorrect. Display attributes are descriptive fields associated with characteristics and are not directly protected by analysis authorizations. Instead, analysis authorizations focus on restricting access to the main characteristic values themselves.

* Option C: Key figure valuesThis is incorrect. Key figures represent numeric data (e.g., sales amounts, quantities) and cannot be directly restricted using analysis authorizations. Instead, restrictions on key figure values are typically achieved indirectly by controlling access to the associated characteristic values.

* Option D: Hierarchy node valuesThis is correct. Analysis authorizations can protect hierarchy node values by restricting access to specific nodes within a hierarchy. For example, users can be granted access only to certain levels or branches of an organizational hierarchy.

References:SAP BW/4HANA Security Guide: Explains how analysis authorizations work and their application to characteristic values and hierarchy nodes.

SAP Help Portal: Provides detailed documentation on configuring analysis authorizations and their impact on data access.

SAP Community Blogs: Experts often discuss practical examples of using analysis authorizations to secure data.

In summary, analysis authorizations can protectcharacteristic valuesandhierarchy node values, making options A and D the correct answers.

NEW QUESTION # 83

For InfoObject ADDRESS, the High Cardinality flag has been set. However, ADDRESS has an attribute CITY without the High Cardinality flag.What is the effect on SID values in this scenario?

- A. SID values are generated when InfoObject CITY is activated.
- B. SID values are generated when InfoObject ADDRESS is activated.
- C. SID values are not stored for InfoObject ADDRESS.
- D. SID values are generated when data for InfoObject ADDRESS is loaded.

Answer: D

NEW QUESTION # 84

Which development object needs to be built to generate an HDI Container?

- A. Space
- B. SQL script procedure
- C. Package
- D. HDB module

Answer: D

Explanation:

In the context of SAP HANA Deployment Infrastructure (HDI), anHDI Containeris a dedicated, isolated schema in the SAP HANA database that stores and manages database objects such as tables, views, procedures, and other artifacts. HDI Containers are used to support multi-target applications (MTAs) and enable developers to manage database objects in a structured and modular way.

* HDB Module (B):AnHDB moduleis a development object within the SAP Web IDE for SAP HANA or SAP Business

Application Studio. It contains the database design-time artifacts (e.g.,.hdbtable,.
hdbview,.hdbsynonym) that define the structure and logic of the database objects. When you build an HDB module, it triggers the creation of an HDI Container if one does not already exist. The HDI Container is then populated with the runtime objects generated from the design-time artifacts defined in the HDB module.
* Key Points:
* The HDB module is part of a Multi-Target Application (MTA) project.
* It uses the HDI Deployer service to deploy the design-time artifacts into the HDI Container.
* The HDI Container ensures isolation and versioning of database objects, making it suitable for modern application development practices.
* Why Not the Other Options?
* Space (A):Aspaceis a concept in Cloud Foundry environments where applications and services are deployed. While spaces are used to organize and isolate resources, they are not directly related to generating an HDI Container. Spaces host applications and services but do not define the database objects required for an HDI Container.
* Package (C):In SAP HANA, apackageis a folder-like structure used to organize development objects in the SAP HANA repository. However, packages alone do not generate HDI Containers.
They are used in the classic repository-based development model (XSA or XS Classic), whereas HDI Containers are associated with the newer HDI-based development model.
* SQL Script Procedure (D):ASQL script procedureis a database artifact used to define procedural logic in SQL. While SQL script procedures can be deployed into an HDI Container, they are not responsible for generating the container itself. The container must already exist before deploying such artifacts.
Development Object Required to Generate an HDI Container:
SAP Data Engineer - Data Fabric Context:In theSAP Data Engineer - Data Fabriclandscape, HDI Containers play a crucial role in enabling modular and scalable data management. They allow developers to create isolated environments for different applications or tenants, ensuring data security and consistency. By leveraging HDB modules, developers can define and deploy database objects in a structured manner, aligning with modern DevOps practices.
For more information, refer to the following resources:
* SAP HANA Developer Guide for SAP HANA XS Advanced: Explains the role of HDB modules and HDI Containers in application development.
* SAP Business Application Studio Documentation: Provides guidance on creating and building HDB modules in the context of MTAs.
* SAP Learning Hub: Offers training on SAP HANA development, including HDI and MTA concepts.
By selectingB (HDB module), you ensure that the correct development object is identified for generating an HDI Container, enabling efficient database development and deployment.
