

SAP C_IBP_2502 Prüfungsmaterialien - C_IBP_2502 PDF

P.S. Kostenlose 2025 SAP C_IBP_2502 Prüfungsfragen sind auf Google Drive freigegeben von DeutschPrüfung verfügbar:
<https://drive.google.com/open?id=1UkOHwKg6RqlrZTDVO9XVw3JZepTgjhN1>

DeutschPrüfung ist eine Website voller Zuversicht. Die IT-Profis von DeutschPrüfung widmen sich der Studie der vielfältigen IT-Zertifizierungsprüfungen, um die Effektivität der Erfolg der SAP C_IBP_2502 Zertifizierungsprüfungen zu verbessern. Solange Sie einmal DeutschPrüfung Unterlagen probieren, wollen Sie unbedingt sie wieder benutzen, weil wir DeutschPrüfung nicht nur Ihnen die besten SAP C_IBP_2502 Zertifizierungsunterlagen, sondern auch den besten Service anbieten. Wenn Sie irgendwelche Meinungen haben, senden Sie bitte ihre Vorschläge an uns per E-Mail. Wir hoffen, wir helfen Kadidaten Erfolg machen und auch bieten den besten Service.

SAP C_IBP_2502 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.
Thema 2	Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.
Thema 3	Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.
Thema 4	Analytics and Reporting: his section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.

Thema 5	• General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.
Thema 6	• Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Thema 7	• Solution Architecture & Data Integration: This exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Thema 8	• Planning Operators & Application: Jobs This section is designed for demand planners and focuses on the configuration and execution of planning operators and application jobs. It includes an understanding of how these tools automate planning processes and improve system performance. Candidates will be tested on their ability to configure and execute jobs that support various planning functions.

C_IBP_2502 PDF & C_IBP_2502 Deutsch Prüfungsfragen

Während andere Leute in der U-Bahn erstarren, können Sie mit Pad die PDF Version von SAP C_IBP_2502 Prüfungsunterlagen lesen. Während andere im Internet spielen, können Sie mit Online Test Engine der SAP C_IBP_2502 trainieren. Wir glauben, dass so fleißig wie Sie sind, können Sie bestimmt in einer sehr kurzen Zeit die SAP C_IBP_2502 Prüfung bestehen. Während andere noch über Ihre ausgezeichnete Erzeugnisse erstaunen, haben Sie wahrscheinlich ein wunderbare Arbeitsstelle bekommen.

SAP Certified Associate - SAP IBP for Supply Chain C_IBP_2502 Prüfungsfragen mit Lösungen (Q24-Q29):

24. Frage

What are some of the capabilities of the Planner Workspaces app? Note: There are 2 correct answers to this question.

- A. It supports simulating the effect of the changes
- B. It supports sharing with other users or user groups
- C. It supports favorites created in SAP IBP, add-in for Microsoft Excel
- D. It supports embedding analytic stories as a workspace component

Antwort: C,D

Begründung:

The Planner Workspaces app in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and collaboration features for supply chain planners.

* Option A: It supports simulating the effect of the changes This is incorrect. While simulation is a feature in SAP IBP (e.g., via versions or scenarios in Excel), Planner Workspaces focuses on visualization and navigation, not direct simulation execution. Simulation occurs in other apps like Excel or Manage Scenarios.

* Option B: It supports favorites created in SAP IBP, add-in for Microsoft Excel This is correct.

Planner Workspaces integrates with the Excel add-in, allowing users to access their Excel favorites (e.g., planning views) directly within the workspace. This enhances usability by linking preferred tools, as per SAP IBP's documentation on Planner Workspaces.

* Option C: It supports embedding analytic stories as a workspace component This is correct.

Analytic stories (created in the Manage Analytics Stories app) can be embedded in Planner Workspaces, providing charts and insights alongside planning data. This is a key visualization feature, per SAP IBP's UI capabilities.

* Option D: It supports sharing with other users or user groups This is incorrect. Sharing is available in Excel (e.g., templates) or analytics apps, but Planner Workspaces doesn't have a native sharing function for workspaces themselves. Collaboration occurs via other mechanisms.

Thus, B and C are accurate capabilities of Planner Workspaces, aligning with SAP IBP's official feature set.

25. Frage

You are modeling co-products in SAP Integrated Business Planning for Supply Chain. What are some of the properties of co-production you need to be aware of? Note: There are 2 correct answers to this question.

- A. Co-production can be modeled only by supply optimizer and finite heuristics
- **B. The number of co-products that can be defined in the supply model is unlimited**
- **C. The relationship between main product and co-product is specified in the production source of supply**
- D. The output coefficient is time-dependent and should be modeled as a time series

Antwort: B,C

Begründung:

Co-products in SAP IBP represent items produced simultaneously with a main product (e.g., in chemical manufacturing). They are modeled in supply planning, typically via the Production Source of Supply master data.

* Option A: The number of co-products that can be defined in the supply model is unlimited This is correct. SAP IBP's Production Source Item allows multiple co-products to be linked to a main product via output coefficients. There's no hardcoded limit, though practical constraints (e.g., performance) may apply, as per SAP IBP's supply planning documentation.

* Option B: The output coefficient is time-dependent and should be modeled as a time series This is incorrect. The output coefficient (e.g., 1 unit of main product yields 0.5 units of co-product) is a static attribute in the Production Source Item master data, not a time-dependent key figure by default. Time-series modeling is possible but not required.

* Option C: The relationship between main product and co-product is specified in the production source of supply This is correct. In SAP IBP, the Production Source of Supply (e.g., Production Source Header and Item) defines the main product and co-products, including output ratios, as a core feature of supply planning, per official documentation.

* Option D: Co-production can be modeled only by supply optimizer and finite heuristics This is incorrect. Co-products are supported by both infinite heuristics (e.g., calculating unconstrained supply) and finite methods (optimizer, heuristics), not limited to finite planning.

Thus, A and C accurately describe co-production properties in SAP IBP, per its supply modeling capabilities.

26. Frage

What is a feature of the weighted average key figure calculation?

- **A. The numerator's value should include multiplication by the weight**
- B. Attributes can be used in weighted average key figure calculation
- C. The numerator of the calculation should be stored
- D. The first parameter of the formula acts as a weight

Antwort: A

Begründung:

Weighted average calculations in SAP IBP (e.g., $KF3 = \text{SUM}(KF1 * KF2) / \text{SUM}(KF2)$) use a weight key figure, configured in the Planning Areas app, per SAP IBP's documentation.

* Option A: The numerator of the calculation should be stored This is incorrect. The numerator (e.g., value * weight) is calculated, not necessarily stored.

* Option B: The first parameter of the formula acts as a weight This is incorrect. The weight is explicitly defined (e.g., KF2), not assumed as the first parameter.

* Option C: Attributes can be used in weighted average key figure calculation This is incorrect.

Attributes as key figures provide static values, but weights are typically key figures, not attributes directly.

* Option D: The numerator's value should include multiplication by the weight This is correct. In a weighted average (e.g., $(KF1 * KF2) / \text{SUM}(KF2)$), the numerator multiplies the value (KF1) by the weight (KF2), a defining feature, per SAP IBP's calculation rules.

Thus, D is the correct feature, per SAP IBP's official calculation logic.

27. Frage

Which conditions have to be fulfilled as a prerequisite to maintain a key figure disaggregation? Note: There are 2 correct answers to this question.

- A. The key figure is calculated and all editable
- **B. The key figure is stored and system editable**
- C. The key figure is calculated and system editable
- **D. The key figure is stored and all editable**

Antwort: B,D

Begründung:

Disaggregation in SAP IBP distributes aggregated key figure values to lower levels, configured in the Planning Areas app.

Prerequisites depend on the key figure's properties, per SAP IBP's documentation.

* Option A: The key figure is calculated and system editable This is incorrect. Calculated key figures derive values and aren't typically disaggregated; they're outputs, not inputs for disaggregation.

* Option B: The key figure is calculated and all editable This is incorrect. Calculated key figures aren't manually editable (all editable), and disaggregation applies to stored key figures.

* Option C: The key figure is stored and system editable This is correct. A stored key figure (persisted data) that's system editable (e.g., via operators) can be disaggregated, a valid condition, per SAP IBP's rules.

* Option D: The key figure is stored and all editable This is correct. A stored key figure that's fully editable (e.g., manually in Excel) supports disaggregation, as users can input aggregated values to split, per SAP IBP's documentation.

Thus, C and D are prerequisites, per SAP IBP's official disaggregation requirements.

28. Frage

You are reviewing the master data types that are often used for supply and inventory planning. Which master data types are compound master data types? Note: There are 2 correct answers to this question.

- A. SOURCECUSTGROUP
- **B. SOURCECUSTOMER**
- C. SOURCEPRODUCTION
- **D. SOURCELOCATION**

Antwort: B,D

Begründung:

In SAP IBP, master data types are classified as simple (standalone) or compound (combining multiple simple types). Compound master data types link related entities (e.g., source and target) and are critical for supply and inventory planning to define relationships.

* Option A: SOURCEPRODUCTION This is incorrect. SOURCEPRODUCTION is not a standard compound master data type in SAP IBP. Production relationships are modeled via Production Source of Supply (e.g., Production Source Header/Item), not a compound type named SOURCEPRODUCTION.

* Option B: SOURCECUSTOMER This is correct. SOURCECUSTOMER is a compound master data type combining Source ID (e.g., Location or Product) and Customer ID. It defines sourcing relationships (e.g., which customers are served from which sources) and is used in supply and inventory planning to allocate demand.

* Option C: SOURCELOCATION This is correct. SOURCELOCATION is a compound master data type linking Source Location and Target Location (e.g., via Transportation Lane). It's essential for modeling supply chain networks in inventory and supply planning.

* Option D: SOURCECUSTGROUP This is incorrect. There's no standard compound master data type called SOURCECUSTGROUP in SAP IBP. Customer groups might be attributes, but they don't form a compound type.

Thus, B and C (SOURCECUSTOMER, SOURCELOCATION) are compound master data types in SAP IBP, as per official master data configuration documentation.

29. Frage

.....

Die Produkte von DeutschPrüfung sind von guter Qualität. Sie sind am schnellsten aktualisiert. Wenn Sie die Schulungsunterlagen zur SAP C_IBP_2502 Zertifizierungsprüfung kaufen, können Sie die SAP C_IBP_2502 Zertifizierungsprüfung sicher bestehen.
