

SAP C_IBP_2502 Reliable Test Book - C_IBP_2502 Valid Test Fee

P.S. Free 2025 SAP C_IBP_2502 dumps are available on Google Drive shared by TestValid: <https://drive.google.com/open?id=1F16WOqy4A-QRUBJanE-Vf6ofA-C22hLS>

We are a team of the exam questions providers of SAP braindumps in the IT industry that ensure you to pass actual test 100%. We have experienced and professional IT experts to create the latest C_IBP_2502 Exam Questions And Answers which are approach to the real C_IBP_2502 practice test. Try download the free dumps demo.

Up to now we classify our C_IBP_2502 exam questions as three different versions. They are pdf, software and the most convenient one APP online. Though the content of these three versions is the same, but their displays are different. Each of them has their respective feature and advantage including new information that you need to know to pass the C_IBP_2502 test. So you can choose the version of C_IBP_2502 training quiz according to your personal preference.

>> SAP C_IBP_2502 Reliable Test Book <<

Choose The C_IBP_2502 Reliable Test Book, Pass The SAP Certified Associate - SAP IBP for Supply Chain

Our website is a pioneer in providing comprehensive SAP dumps torrent because we have a group of dedicated IT experts who have more than 10 years of experience in the study of C_IBP_2502 test questions and answers. They work in advance to make sure that our candidates will get latest and accurate C_IBP_2502 Exam Prep materials. You will get C_IBP_2502 passing score with the shortest duration for exam preparation.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q24-Q29):

NEW QUESTION # 24

What is a feature of the weighted average key figure calculation?

- A. Attributes can be used in weighted average key figure calculation
- **B. The numerator's value should include multiplication by the weight**
- C. The numerator of the calculation should be stored
- D. The first parameter of the formula acts as a weight

Answer: B

Explanation:

Weighted average calculations in SAP IBP (e.g., $KF3 = \text{SUM}(KF1 * KF2) / \text{SUM}(KF2)$) use a weight key figure, configured in the Planning Areas app, per SAP IBP's documentation.

* Option A: The numerator of the calculation should be stored This is incorrect. The numerator (e.g., value * weight) is calculated, not necessarily stored.

* Option B: The first parameter of the formula acts as a weight This is incorrect. The weight is explicitly defined (e.g., KF2), not assumed as the first parameter.

* Option C: Attributes can be used in weighted average key figure calculation This is incorrect.

Attributes as key figures provide static values, but weights are typically key figures, not attributes directly.

* Option D: The numerator's value should include multiplication by the weight This is correct. In a weighted average (e.g., $(KF1 * KF2) / \text{SUM}(KF2)$), the numerator multiplies the value (KF1) by the weight (KF2), a defining feature, per SAP IBP's calculation rules.

Thus, D is the correct feature, per SAP IBP's official calculation logic.

NEW QUESTION # 25

The S&OP Operator Profiles app is used to configure different types of algorithms. Which algorithm-specific settings are unique for the Time-Series-Based Supply Optimizer? Note: There are 2 correct answers to this question.

- **A. Global cost factors**
- B. Time profile level
- C. Processing mode
- **D. Discretization**

Answer: A,D

Explanation:

The S&OP Operator Profiles app in SAP IBP configures planning algorithms (e.g., heuristics, optimizer). The Time-Series-Based Supply Optimizer has unique settings reflecting its optimization approach.

* Option A: Discretization This is correct. Discretization (e.g., binary or integer variables for lot sizes) is specific to the optimizer, enabling discrete decisions (e.g., full truckloads), a feature not in heuristics, per SAP IBP's optimizer documentation.

* Option B: Time profile level This is incorrect. Time profile level applies to all time-series planning (heuristics and optimizer), not unique to the optimizer.

* Option C: Global cost factors This is correct. The optimizer uses global cost factors (e.g., non-delivery, inventory holding costs) to balance trade-offs across the network, a unique setting compared to heuristics, per SAP IBP's configuration guides.

* Option D: Processing mode This is incorrect. Processing mode (e.g., batch vs. interactive) is a general job setting, not algorithm-specific to the optimizer.

Thus, A and C are unique settings for the Time-Series-Based Supply Optimizer, per SAP IBP's official documentation.

NEW QUESTION # 26

Which of the following is a feature of Transportation Load Building (TLB)?

- A. Loads are calculated based on the minimum utilization of equipment
- B. Loads are calculated based on transportation lanes and modes of transport
- **C. It uses rule-based planning to create transportation loads**
- D. Loads are integrated into SAP ERP or SAP S/4HANA as distribution receipts

Answer: C

Explanation:

Transportation Load Building (TLB) in SAP IBP (part of Supply Chain Control Tower or integration with SAP TM) optimizes the consolidation of shipments into transportation loads based on constraints like capacity and rules.

* Option A: Loads are calculated based on transportation lanes and modes of transport. This is partially true but not the defining feature. TLB considers lanes and modes (e.g., truck, rail) as inputs, but its core function is grouping shipments, not merely calculating based on these. It's too generic to be the standout feature.

* Option B: Loads are integrated into SAP ERP or SAP S/4HANA as distribution receipts. This is incorrect. TLB focuses on planning loads within SAP IBP or TM, not direct integration into ERP

/S4HANA as "distribution receipts." Integration might occur downstream, but it's not a TLB feature.

* Option C: It uses rule-based planning to create transportation loads. This is correct. TLB employs configurable rules (e.g., maximum weight, volume, compatibility) to consolidate shipments into loads.

For example, it might ensure a truck's capacity is fully utilized while respecting delivery windows, a hallmark of TLB in SAP IBP's supply planning capabilities, as per official documentation.

* Option D: Loads are calculated based on the minimum utilization of equipment. This is incorrect.

TLB aims to maximize, not minimize, equipment utilization to reduce costs. Minimum utilization might be a constraint, but it's not the calculation basis.

Thus, C is the defining feature of TLB, reflecting its rule-based approach, consistent with SAP IBP's supply chain optimization tools.

NEW QUESTION # 27

Which of the following conditions are relevant for subtotals in the planning view? Note: There are 2 correct answers to this question.

- A. The values of the attribute-based total at the highest attribute level in the planning level can be changed
- B. Only attribute-based totals can be added to the planning view
- C. The total value can be added before or after the selected attribute
- D. The total number of attributes that can use subtotal in the planning view can be restricted

Answer: C,D

Explanation:

Subtotals in SAP IBP planning views (typically in the Excel add-in) allow users to aggregate key figure values by attributes (e.g., Product, Location) for analysis. Configuration and display options govern their behavior.

* Option A: The total value can be added before or after the selected attribute. This is correct. In the planning view, subtotals can be positioned flexibly—either before (above) or after (below) the attribute values in the layout. This is configurable in the Excel template design, a standard feature per SAP IBP's planning view documentation.

* Option B: The total number of attributes that can use subtotal in the planning view can be restricted. This is correct. The number of attributes for subtotals can be limited by the planning view's design or system performance settings (e.g., via global parameters or template complexity), ensuring usability and efficiency, as noted in SAP IBP's UI guidelines.

* Option C: The values of the attribute-based total at the highest attribute level in the planning level can be changed. This is incorrect. Subtotals are calculated aggregates and not directly editable at the highest level unless disaggregated. The planning level defines editable data, not subtotal overrides.

* Option D: Only attribute-based totals can be added to the planning view. This is incorrect. Subtotals can also be time-based (e.g., by week, month) or key figure-based, not just attribute-based, depending on the view's configuration.

Thus, A and B reflect SAP IBP's subtotal functionality in planning views, per official documentation.

NEW QUESTION # 28

Which SAP IBP planning operator can be run to delete planning objects in a certain version?

- A. Purge Key Figure Data Outside Planning Area Planning Horizon
- B. Purge Key Figure Data
- C. Purge Master Data
- D. Purge Non-Conforming Data

Answer: B

Explanation:

Planning operators in SAP IBP (via the Application Jobs app) manage data, including deletions. The question likely intends "delete key figure data for planning objects" in a version, not the objects themselves, per SAP IBP's terminology.

* Option A: Purge Master Data. This is incorrect. This deletes master data (e.g., Products), not key figure data tied to planning objects in a version.

* Option B: Purge Key Figure Data Outside Planning Area Planning Horizon. This is incorrect. This deletes data outside the horizon

across versions, not specific to a version's planning objects.

* Option C: Purge Key Figure Data This is correct. The Purge Key Figure Data operator deletes key figure values for specified planning objects (e.g., by filter) in a selected version, per SAP IBP's data management documentation.

* Option D: Purge Non-Conforming Data This is incorrect. This removes inconsistent data (e.g., orphaned records), not targeted deletion in a version.

Thus, C is the correct operator, per SAP IBP's official job capabilities.

NEW QUESTION # 29

.....

After using our software, you will know that it is not too difficult to pass C_IBP_2502 exam. You will find some exam techniques about how to pass C_IBP_2502 exam from the exam materials and question-answer analysis provided by our TestValid. Besides, to make you be rest assured of our dumps, we provide C_IBP_2502 Exam Demo for you to free download.

C_IBP_2502 Valid Test Fee: https://www.testvalid.com/C_IBP_2502-exam-collection.html

SAP C_IBP_2502 Reliable Test Book Obtain what you want and need as soon as possible, the glorious future is waiting for you, Since C_IBP_2502 certification has become a good way for all of the workers to prove how capable and efficient they are, Gaining the C_IBP_2502 certification can bring about considerable benefits, If you can successfully pass the C_IBP_2502 exam with the help of our TestValid, we hope you can remember our common efforts.

First, we look at the people aspect, Source Code C_IBP_2502 Licenses, Obtain what you want and need as soon as possible, the glorious future is waiting for you, Since C_IBP_2502 Certification has become a good way for all of the workers to prove how capable and efficient they are.

100% Pass 2025 High-quality SAP C_IBP_2502: SAP Certified Associate - SAP IBP for Supply Chain Reliable Test Book

Gaining the C_IBP_2502 certification can bring about considerable benefits, If you can successfully pass the C_IBP_2502 exam with the help of our TestValid, we hope you can remember our common efforts.

You must want to know how to get the trial demo of our C_IBP_2502 question torrent; the answer is the PDF version.
