C_S4TM_2023 Exam Questions Fee | Test C_S4TM_2023 Questions Vce

There are a lot of sites provide the SAP C_S4TM_2023 exam certification and other training materials for you. Itcertking is only website which can provide you SAP C_S4TM_2023 exam certification with high quality. In the guidance and help of Itcertking, you can through your SAP C_S4TM_2023 Exam the first time. The questions and the answer provided by Itcertking are IT experts use their extensive knowledge and experience manufacturing out. It can help your future in the IT industry to the next level.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which of the following can be used as origin of condition?

Note: There are 2 correct answers to this question.

- A. BRFplus decision table
- B. Determination class
- C. Data crawler
- D. Direct business object access

Answer: A,D

NEW QUESTION # 17

You want to set up charge calculation for freight orders. Valid charges should consist of a base charge based on the distance and gross weight of the freight order, and a supplemental charge per container that is included in the freight order. Multiple containers are allowed for each freight order, and the charge is based on the container type. The container type can be small, medium, or large. What is the minimum number of charge lines with instruction type "standard" that you must set up?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

To set up charge calculation for freight orders in SAP S/4HANA Transportation Management, you need to define charge lines in the calculation sheet with the instruction type "standard" to represent the different types of charges. According to the SAP documentation:

* A base charge based on distance and gross weight requires one charge line with instruction type "standard" to calculate the cost using a rate table that considers these parameters.

* A supplemental charge per container based on container type (small, medium, large) requires a second charge line with instruction type "standard" to apply the container-specific charge, which can be defined in a rate table with scales for container types. Since the requirement involves two distinct charge calculations (base charge and container charge), the minimum number of charge lines with instruction type "standard" is 2.

The other options are incorrect:

* A (0) is not possible, as charges require at least one charge line.

* C (1) is insufficient, as it cannot cover both the base charge and container charge.

* D (3) is unnecessary, as the container types can be handled within a single charge line using a rate table with scales.

NEW QUESTION # 18

There is one order-based transportation requirement (OTR) with the following items (see attached table) the relevant freight unit building rule users. How many freight units will be created?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

NEW QUESTION # 19

You have created two freight units for customer A and two freight units for customer B.

You have defined the transportation network (see attached diagram) and no incompatibilities exist. How many freight orders does the optimizer create using only route-based distance costs?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

NEW QUESTION # 20

Which documents are created in materials management when you transfer a freight settlement document from transportation management to materials management when cost distribution is NOT enabled? Note: There are 2 correct answers to this question.

- **A. Service entry sheet**
- B. Settlement management document
- **C. Purchase order**
- D. Carrier invoice

Answer: A,C

Explanation:

When a freight settlement document (FSD) is transferred from SAP S/4HANA Transportation Management to Materials Management (MM) without cost distribution enabled, the system creates specific documents to handle the financial settlement.

According to the SAP documentation:

- * Service entry sheet (B) is created in MM to record the services performed by the carrier, based on the FSD details.
- * Purchase order (C) is generated to formalize the procurement of transportation services, linked to the FSD.

The other options are incorrect:

- * Carrier invoice (A) is not created automatically in MM; it may be received from the carrier but is not a system-generated document.
- * Settlement management document (D) is used in SAP S/4HANA for contract-based settlement but is not directly created from the FSD in this scenario.
