At the same time, you are bound to pass the C_SEC_2405 exam and get your desired C_SEC_2405 certification for the validity and accuracy of our C_SEC_2405 study materials.

SAP Certified Associate - Security Administrator Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which of the following allow you to control the assignment of table authorization groups? Note: There are 2 correct answers to this question.

- A. V_DDAT_54
- B. SSM_CUST
- C. PRGN_CUST
- D. V_BRG_54

Answer: C,D

NEW QUESTION # 23

In SAP S/4HANA Cloud Public Edition, what does the ID of an SAP-predefined Space refer to?

- A. The SAP Fiori applications it was defined for
- B. The business area it was designed for
- C. The software release it was created for
- D. The business roles it is to be assigned to

Answer: B

Explanation:

* Context: SAP-predefined spaces in S/4HANA Cloud are aligned with specific business functions to streamline access and usability.

* Solution Explanation:

* The ID of an SAP-predefined Space corresponds to the business area it supports, ensuring alignment with functional requirements.

SAP Security References:

* SAP Fiori Launchpad Space Management Documentation

* SAP Help Portal for Space Configuration

NEW QUESTION # 24

Which optional components can be included when transporting a role definition from the development system to the quality assurance system? Note: There are 3 correct answers to this question.

- A. Generated profiles of dependent roles
- B. Personalization data
- C. Generated profiles of single roles
- D. Indirect user assignments
- E. Direct user assignments

Answer: B,C,E

Explanation:

When transporting a role definition from the development system to the quality assurance system in SAP, optional components that can be included are Direct user assignments, Generated profiles of single roles, and Personalization data. Direct user assignments link specific users to the role, allowing these assignments to be transported for testing purposes, though this is typically avoided in production to maintain centralized user management. Generated profiles of single roles, which contain the authorization data for the

role, are included to ensure the role's permissions are correctly tested in the target system. Personalization data, such as user-specific settings or preferences, can also be transported to preserve role-specific configurations. Generated profiles of dependent roles are not typically included, as they relate to composite roles, and Indirect user assignments are managed separately, often via organizational structures. These optional components provide flexibility in role transport, ensuring that the quality assurance system accurately reflects the development environment while supporting secure and efficient role testing.

NEW QUESTION # 25

In SAP S/4HANA Cloud Public Edition, what does the ID of an SAP-predefined Space refer to?

- A. The SAP Fiori applications it was defined for
- **B. The business area it was designed for**
- C. The software release it was created for
- D. The business roles it is to be assigned to

Answer: B

Explanation:

In SAP S/4HANA Cloud Public Edition, the ID of an SAP-predefined Space refers to the business area it was designed for. Spaces in the SAP Fiori launchpad are organizational units that group Fiori apps and tiles relevant to specific business functions, such as finance, procurement, or human resources. The ID of a predefined Space reflects this business area, providing a clear and intuitive way to organize applications for users based on their functional roles. This design enhances user experience by ensuring that relevant apps are easily accessible within a business context. The ID does not refer to the software release, as Spaces are release-independent, nor to specific Fiori applications or business roles, which are assigned separately via catalogs and roles. By tying the Space ID to the business area, SAP ensures that the Fiori launchpad aligns with organizational processes, supporting efficient navigation and access control while maintaining a user-centric and business-focused interface.

NEW QUESTION # 26

Which entities share data with Business Partners in the S/4HANA Business User Concept? Note: There are 2 correct answers to this question.

- **A. User**
- **B. Employee**
- C. Employer
- D. Administrator

Answer: A,B

Explanation:

In the SAP S/4HANA Business User Concept, the entities that share data with Business Partners are User and Employee. The User entity represents the technical user account in the system, defined in user master records, and is linked to Business Partners to associate system access with business roles and authorizations. The Employee entity represents the human resource data of an individual, such as their organizational assignment or job role, and is synchronized with Business Partners to ensure that user access aligns with their employment details. This integration ensures that Business Partners, which serve as a central entity for managing business relationships, have consistent data for access control and business processes. The Employer entity is not directly linked to Business Partners, as it represents the organization, not an individual.

Similarly, Administrator is a role or user type, not an entity sharing data with Business Partners. This data-sharing mechanism supports seamless identity and access management, enhancing security and operational alignment in SAP S/4HANA systems.

NEW QUESTION # 27

.....

In order to make you confirm the quality of our C_SEC_2405 Dumps and let you know whether the dumps suit you, pdf and software version in Exam4Labs exam dumps can let you download the free part of our C_SEC_2405 training materials.
