SAP Certified Associate - Solution Transformation Consultant with SAP Cloud ALM Sample Questions (Q26-Q31):

NEW QUESTION # 26

In SAP Cloud ALM, which of the following attributes can you use to classify documents?

Note: There are 2 correct answers to this question.

- A. Priority
- B. Risk level
- C. Deliverable
- D. Owner

Answer: C,D

Explanation:

In SAP Cloud ALM for Implementation, documents can be classified using specific attributes. The "Deliverable" and "Owner" are common attributes that allow users to organize and manage documents more efficiently. These attributes help to categorize the document based on its purpose and responsibility.

Deliverable: Refers to the tangible or intangible output of a project that needs to be delivered to the customer.

Owner: The individual responsible for managing the document or deliverable.

NEW QUESTION # 27

In SAP Cloud ALM, which attributes can be used to categorize features?

Note: There are 3 correct answers to this question.

- A. Tags
- B. Deliverable
- C. Risk level
- D. Release
- E. Workstream

Answer: A,D,E

Explanation:

The following attributes can be used to categorize features in SAP Cloud ALM:

Release: Helps link features to specific releases.

Workstream: Allows you to associate features with specific workstreams within a project.

Tags: Provides a flexible way to categorize and filter features based on custom labels or categories.

NEW QUESTION # 28

In SAP Cloud ALM, which feature status works for the deployment to production system?

- **A. Approve for Production**
- B. Deployed
- C. Ready for Production

Answer: A

Explanation:

The status "Approve for Production" is used when a feature is ready to be deployed to the production system. It indicates that all necessary approvals and checks have been completed, and the feature is prepared for final deployment.

SAP Help Portal on Feature Status Management in SAP Cloud ALM

NEW QUESTION # 29

Which of the following can SAP Cloud ALM for operations consume on the inbound side?

Note: There are 3 correct answers to this question.

- **A. Configuration items**
- **B. Metrics Log entries**
- **C. SQL statements**
- D. BPMN files

Answer: A,B,C

Explanation:

SAP Cloud ALM for operations can consume the following inbound data:

Metrics Log entries: For performance and health monitoring.

Configuration items: To ensure proper configuration management.

SQL statements: To analyze database operations and performance.

Reference:

SAP Help Portal on Inbound Data for SAP Cloud ALM

NEW QUESTION # 30

In SAP Cloud ALM, how can you adapt SAP best practice process content?

Note: There are 2 correct answers to this question.

- A. Copy a diagram into a custom process.
- **B. Copy a diagram directly from SAP Signavio into a custom process.**
- **C. Copy a solution process flow into a custom process.**
- D. Modify the SAP best practice content directly.

Answer: B,C

Explanation:

To adapt SAP best practice process content in SAP Cloud ALM, you have the ability to copy the process content and adapt it to your needs. However, you cannot modify the SAP best practice content directly.

Copy from SAP Signavio: SAP Signavio provides predefined process models that can be directly copied into custom processes in Cloud ALM.

Copy a solution process flow: You can copy the solution process flows from SAP best practices and customize them in Cloud ALM
