

SAP Certification C_CPI_2506 Test Questions: SAP Certified Associate - Integration Developer - Exams4Collection 100% Pass Rate Offer

Our C_CPI_2506 study questions will update frequently to guarantee that you can get enough test banks and follow the trend in the theory and the practice. That is to say, our C_CPI_2506 training materials boost many advantages and to gain a better understanding of our C_CPI_2506 Guide Torrent. It is very worthy for you to buy our C_CPI_2506 practice guide and please trust us. If you still can't fully believe us, please read the introduction of the features and the functions of our C_CPI_2506 learning questions.

As we all know, passing an exam is not an easy thing for many candidates. They need time and energy to practice. C_CPI_2506 study materials will save your time with the skilled professional to compile them, and they are quite familiar with exam center. Therefore there is no need for you to research the C_CPI_2506 Study Materials by yourself. Furthermore, we use international recognition third party for your payment for C_CPI_2506 exam dumps, and your money and account safety can be guaranteed. If you find your interests haven't been guaranteed, you can ask for the refund.

Certification C_CPI_2506 Test Questions | Efficient C_CPI_2506: SAP Certified Associate - Integration Developer

A free demo of the SAP Certified Associate - Integration Developer (C_CPI_2506) practice material is available at Exams4Collection. You are welcome to try a free demo to remove your doubts before buying our SAP Certified Associate - Integration Developer product. Furthermore, a 24/7 customer support team of Exams4Collection is available. If you have any questions in your mind about our C_CPI_2506 Study Material, feel free to contact us.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 2	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.

Topic 3	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 4	• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

SAP Certified Associate - Integration Developer Sample Questions (Q20-Q25):

NEW QUESTION # 20

Why does the API Management capability of the SAP Integration Suite require API providers?

- A. To create APIs
- **B. To incorporate APIs from source systems**
- C. To create authenticated API instances

Answer: B

Explanation:

In API Management (Integration Suite):

API Providers represent backend systems (e.g., SAP S/4HANA, SuccessFactors, third-party APIs).

They are required to connect and incorporate APIs from those systems into API Management.

Once defined, API Proxies are created from API Providers to expose APIs securely.

Other options:

Authentication is handled via policies, not API Providers.

APIs are created as API Proxies, not directly by Providers.

Thus, the purpose of API Providers is to incorporate APIs from source systems.

NEW QUESTION # 21

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. AMQP
- B. Mail
- **C. OData**
- D. SFTP

Answer: C

Explanation:

You can use an OData adapter to implement a synchronous call to a remote HTTP API as an integration flow component. An OData adapter allows you to send and receive messages using the OData protocol. OData stands for Open Data Protocol and is a standard for exposing and consuming data over HTTP or HTTPS. You can use an OData adapter to communicate with OData services that support CRUD (Create, Read, Update, Delete) operations on resources. NEW QUESTION # 22

Which SAP Integration Suite component delivers the Cloud Event to the "emis-s4hana-uc123" message queue?

- A. API Management
- **B. Event Mesh**
- C. Process Integration
- D. Open Connector

Answer: B

Explanation:

In SAP Integration Suite, the component responsible for delivering Cloud Events to message queues is Event Mesh.

Event Mesh handles event-driven communication and manages message queues like emis-s4hana-uc123.

Process Integration (PI/PO) is on-premise middleware, not part of Integration Suite cloud services.

API Management handles APIs, not messaging events.

Open Connectors provides connectivity to third-party SaaS apps, not queue management.

Thus, the Cloud Event is delivered to the message queue via Event Mesh.

NEW QUESTION # 23

What is the relationship between an API provider and an API proxy in the API Management capability within SAP Integration Suite?

- A. The API provider provides a unique URL for an API proxy.
- **B. The API proxy provides a unique URL and acts as a proxy for the API provider.**
- C. The API provider manages secure API access for an API proxy.

Answer: B

Explanation:

An API proxy is an API that acts as a proxy for another API, which is usually the backend service that provides the actual functionality. An API proxy can be used to add security, monitoring, caching, transformation, and other features to the backend API.

An API provider is a logical grouping of APIs that share a common connection to the backend service. An API provider can be used to discover and import APIs from the backend service into the API Management capability within SAP Integration Suite. The relationship between an API provider and an API proxy is that the API proxy uses the API provider as a source of information and configuration for accessing the backend service. The API proxy also provides a unique URL that can be used by clients to invoke the API without exposing the details of the backend service. NEW QUESTION # 24

Which of the following capabilities within SAP Integration Suite are core for integration? Note: There are 3 correct answers to this question.

- **A. API Management**
- B. Integration Advisor
- C. Open Connectors
- **D. Integration Assessment**
- **E. Cloud Integration**

Answer: A,D,E

Explanation:

The following capabilities within SAP Integration Suite are core for integration: Integration Assessment, Cloud Integration, and API Management. Integration Assessment allows you to evaluate your integration landscape and strategy and identify the best-fit integration technologies and tools for your scenarios. Cloud Integration allows you to design, deploy, and monitor integration flows between cloud and on-premise systems using various adapters and protocols. API Management allows you to create, publish, secure, and monitor APIs across different environments and platforms.
