C-CPI-2506 Test Cram Pdf & C-CPI-2506 Latest Exam Format

You can install and use ITdumpsfree SAP exam dumps formats easily and start SAP C-CPI-2506 exam preparation right now. The ITdumpsfree C-CPI-2506 desktop practice test software and web-based practice test software both are the mock SAP Certified Associate - Integration Developer (C-CPI-2506) exam that stimulates the actual exam format and content.

SAP Certified Associate - Integration Developer Sample Questions (Q54-Q59):

NEW QUESTION # 54

Which data store operation can you use to save a customer ID?

- A. POST
- B. SELECT
- C. GET

- **D. WRITE**

Answer: D

Explanation:

In SAP Cloud Integration (part of Integration Suite), the Data Store operations allow temporary or persistent storage of messages for asynchronous processing or correlation.

WRITE # Used to save/store data (e.g., Customer ID) in the Data Store.

GET # Retrieves stored data.

SELECT # Reads stored data with filters.

POST # Not a valid Data Store operation in SAP CPI (it's an HTTP verb).

Hence, to save a customer ID, the correct operation is WRITE.

NEW QUESTION # 55

Which of the following can you use for an XSLT mapping in an integration flow?

- A. HTML
- **B. XML**
- C. JSON
- D. PHP

Answer: B

Explanation:

XSLT (Extensible Stylesheet Language Transformations) is a language designed to transform XML documents into other XML or text formats.

In SAP Cloud Integration, XSLT mapping can only be applied when the payload is in XML format.

For JSON payloads, you would first convert JSON # XML, then apply XSLT mapping.

Other options:

HTML # Not used for XSLT mapping.

JSON # Requires conversion first, cannot be directly used.

PHP # A programming language, unrelated to mappings.

NEW QUESTION # 56

You have created a product based on an API proxy, but you have not published the product yet. What is a consequence?

- A. The product is displayed in the API Business Hub Enterprise with the note "not published".
- **B. The product is not displayed in the API Business Hub Enterprise.**
- C. The product is displayed in the API Business Hub Enterprise but is grayed out.

Answer: B

Explanation:

In API Management (part of SAP Integration Suite), when you create an API Product (which bundles API Proxies for consumption):

Publishing is required before it becomes visible in API Business Hub Enterprise (Developer Portal).

If the product is not yet published, it remains in the design-time environment and is invisible to app developers.

Only published products are available for subscription and discovery.

Other options:

The product will not be shown grayed out or with a "not published" note; it simply won't be visible at all in the Business Hub Enterprise.

NEW QUESTION # 57

What are some message protocols that the API Management capability within SAP Integration Suite supports?

Note: There are 2 correct answers to this question.

- A. IDoc
- B. RFC

- C. OData
- D. SOAP

Answer: C,D

Explanation:

API Management in SAP Integration Suite supports HTTP-based protocols.

Supported # SOAP, OData, REST (OpenAPI).

Not supported directly # RFC and IDoc (these are legacy SAP protocols handled via Cloud Integration or On- Premise adapters, not via API Management).

Thus, the correct supported message protocols are SOAP and OData.

NEW QUESTION # 58

You are creating an API in the API management capability within SAP Integration Suite using Edit in API Designer. What is the next step to consolidate the resources?

- A. Generate the database tables.
- B. Generate the microservices.
- C. Generate the server stubs
- D. Generate the client stubs

Answer: C

Explanation:

After creating an API in the API management capability within SAP Integration Suite using Edit in API Designer, the next step to consolidate the resources is to generate the server stubs. Server stubs are code snippets that implement the API operations on a server-side application. They can be generated in different languages and frameworks, such as Java, Node.js, Python, or Spring Boot. Generating server stubs can help you to quickly prototype and test your API functionality without writing much code.
