- A. Freight order type
- B. Forwarding order type
- C. Movement type
- D. Stage type

**Answer: B,D**

**NEW QUESTION # 41**

You want to configure a scenario in which a single trailer will be hauled by more than one truck. Which of the following must you customize? Note: There are 2 correct answers to this question.

- A. Forwarding order type
- B. Freight order type
- C. Freight booking type
- D. Transportation unit type

**Answer: B,D**

Explanation:

To configure a scenario in SAP S/4HANA Transportation Management where a single trailer is hauled by multiple trucks (e.g., in a multi-leg transport), specific customizations are required:
* Transportation unit type (A): According to the SAP documentation, the transportation unit type must be configured to allow a trailer to be defined as a separate entity that can be attached to different trucks during various stages of transport. This ensures the trailer is treated as a distinct resource.
* Freight order type (D): The freight order type must be customized to support multi-leg scenarios, including settings for stage-specific assignments of trucks to the same trailer, enabling the system to manage the trailer across multiple freight orders.
The other options are incorrect:
* Forwarding order type (B)is used for logistics service provider scenarios and does not directly manage trailer-truck assignments.
* Freight booking type (C)is relevant for ocean or air transport, not for road-based multi-truck scenarios.
