The SAP C-SEC-2405 certification exam also enables you to stay updated and competitive in the market which will help you to gain more career opportunities. Do you want to gain all these SAP Certified Associate - Security Administrator (C-SEC-2405) certification exam benefits? Looking for the quick and complete SAP C-SEC-2405 exam dumps preparation way that enables you to pass the C-SEC-2405 Certification Exam with good scores? If your answer is yes then you are at the right place and you do not need to go anywhere. Just download the Pass4suresVCE C-SEC-2405 Questions and start SAP Certified Associate - Security Administrator (C-SEC-2405) exam preparation without wasting further time.

SAP Certified Associate - Security Administrator Sample Questions (Q53-Q58):

NEW QUESTION # 53

Which authorization objects can be used to restrict access to SAP Enterprise Search models in the SAP Fiori launchpad? Note: There are 2 correct answers to this question.

- A. S_ESH_CONN
- B. S_ESH_ADM
- C. SDDLVIEW
- D. RSDDLTP

Answer: A,C

Explanation:

To restrict access to SAP Enterprise Search models in the SAP Fiori launchpad, the authorization objects SDDLVIEW and S_ESH_CONN are used. SDDLVIEW controls access to data definition language (DDL) views, which are often underlying components of search models, ensuring that only authorized users can access or execute these views within the Fiori environment. S_ESH_CONN governs access to enterprise search connectors, which link search models to the Fiori launchpad, allowing administrators to restrict which users can utilize specific search functionalities. These objects provide granular control over search model access, aligning with security and segregation of duties requirements. S_ESH_ADM is used for administrative tasks related to enterprise search, not direct model access, and RSDDLTP is not a standard SAP authorization object. By leveraging SDDLVIEW and S_ESH_CONN, SAP ensures that search capabilities in the Fiori launchpad are securely managed, preventing unauthorized access to sensitive data while enabling efficient search functionality for authorized users.

NEW QUESTION # 54

In S/4HANA on-premise, which of the following combinations is required to grant a business user access to data from a Core Data Services (CDS) view using the standard ABAP authorization concept and authorization object S_RS_AUTH?

- A. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role with authorization for object S_RS_AUTH and assignment of the PFCG role, the CDS role to the business user.
- B. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role containing the CDS role and access conditions based upon authorization object S_RS_AUTH, assignment of the PFCG role to the business user.
- C. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role containing the CDS role and access conditions based upon authorization object S_RS_AUTH, assignment of the PFCG role and the CDS role to the business user.
- D. A CDS role with access conditions based on authorization object S_RS_AUTH, a PFCG role with authorization for object S_RS_AUTH, assignment of the PFCG role to the business user.

Answer: B

Explanation:

To grant a business user access to data from a Core Data Services (CDS) view in SAP S/4HANA on-premise using the standard ABAP authorization concept and S_RS_AUTH, the correct combination includes a CDS role with access conditions based on S_RS_AUTH, a PFCG role containing the CDS role and access conditions based on S_RS_AUTH, and assignment of the PFCG role to the business user. The CDS role defines data access restrictions at the CDS view level, using S_RS_AUTH to enforce specific conditions, such as filtering data by organizational units. The PFCG role incorporates this CDS role and includes S_RS_AUTH authorizations, ensuring that the user's permissions align with both the CDS view's restrictions and ABAP authorization checks. Assigning only the PFCG role to the user simplifies administration, as the CDS role is embedded within it. Options A and C incorrectly suggest assigning the CDS role directly to the user, which is not standard practice, and option D omits the CDS role's integration into the PFCG role. This combination ensures secure and efficient access to CDS view data.

NEW QUESTION # 55

Which of the following allow you to control the assignment of table authorization groups? Note: There are 2 correct answers to this question.

- A. V_DDAT_54
- B. V_BRG_54
- C. PRGN_CUST
- D. SSM_CUST

Answer: A,B

Explanation:

In SAP systems, table authorization groups are controlled using views V_DDAT_54 and V_BRG_54.

V_DDAT_54 is a maintenance view that allows administrators to assign tables to authorization groups, defining which groups protect specific tables and ensuring that access is restricted to authorized users.

V_BRG_54 is another view used to manage table authorization groups, particularly for assigning and maintaining group definitions that link to authorization objects like S_TABU_DIS. These views enable granular control over table access, supporting data security and compliance. PRGN_CUST is a customizing table for role and authorization settings, not specifically for table authorization groups, and SSM_CUST is related to system settings, not table access control. By using V_DDAT_54 and V_BRG_54, SAP provides a structured approach to managing table authorizations, ensuring that sensitive data in tables is protected against unauthorized access while allowing efficient administration of access controls.

NEW QUESTION # 56

Which SU01 user types are NOT enabled for interaction? Note: There are 2 correct answers to this question.

- A. Service
- B. Dialog
- C. System
- D. Communications Data

Answer: A,C

NEW QUESTION # 57

When planning an authorization concept for your SAP S/4HANA Cloud Public Edition implementation, what rules must you consider? Note: There are 2 correct answers to this question.

- A. Business roles can be assigned directly to a business user.
- B. Business catalogs can be assigned directly to a business role.
- C. Business catalogs can be assigned directly to a business user.
- D. SAP Fiori apps, dashboards, and displays can be assigned directly to a business role.

Answer: A,B

NEW QUESTION # 58

.....

We are in a constant state of learning new knowledge, but also a process of constantly forgotten, we always learned then forget, how to solve this problem, the answer is to have a good memory method, our C-SEC-2405 study materials will do well on this point. Our C-SEC-2405 Study Materials have their own unique learning method, abandon the traditional rote learning, adopt diversified memory patterns, such as the combination of text and graphics memory method, to distinguish between the memory of knowledge.
