All wordings cannot describe the procession of our products, but if you get them and after checking the content, you will be determined to place order. What are you waiting for?

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q28-Q33):

NEW QUESTION # 28

How are SAP Best Practices business processes activated in the SAP S/4HANA Cloud Private Edition production system?

- A. Through transports
- B. Through the SAP GUI
- C. Through SAP Signavio Process Navigator
- D. Through SAP Solution Builder

Answer: D

Explanation:

In SAP S/4HANA Cloud Private Edition, SAP Best Practices business processes are activated in the production system using the following tool:

Option A: SAP Signavio Process Navigator

This option is incorrect. SAP Signavio Process Navigator is used for process modeling and analysis, not for activating business processes in the production system.

Option B: Through transports

This option is incorrect. While transports are used to move configurations between systems, the activation of SAP Best Practices content is managed by a specific tool.

Option C: Through the SAP GUI

This option is incorrect. The SAP GUI is an interface for accessing SAP systems but does not directly handle the activation of Best Practices content.

Option D: SAP Solution Builder

This option is correct. SAP Solution Builder is utilized to activate SAP Best Practices content in the production system, ensuring that predefined business processes are correctly implemented.

Therefore, the activation of SAP Best Practices business processes in the SAP S/4HANA Cloud Private Edition production system is performed using SAP Solution Builder.

NEW QUESTION # 29

Which analyses does the Custom Code Migration app deliver? Note: There are 2 correct answers to this question.

- A. Identifying SAP Fiori apps that best fit the customer's needs, based on historical transaction volume and usage
- B. Gathering the number of active business functions in the customer's system and whether they are compatible with SAP S/4HANA
- C. Checking customer-defined artifacts against the simplification database to analyze which items do NOT comply with SAP S/4HANA
- D. Gathering statistical information about development objects in the customer's system that need to be adapted

Answer: C,D

Explanation:

The Custom Code Migration app in SAP S/4HANA Cloud Private Edition supports system conversions by analyzing custom ABAP code for compatibility with S/4HANA. Let's analyze:

* A. Gathering statistical information about development objects in the customer's system that need to be adapted: This is correct.

The app provides statistics on custom objects (e.g., programs, enhancements) in the customer's system, identifying those requiring adaptation due to S/4HANA's simplified data models or deprecated features.

* B. Identifying SAP Fiori apps that best fit the customer's needs, based on historical transaction volume and usage: This is incorrect. This analysis is part of tools like the SAP Readiness Check or Fiori Apps Recommendation Report, not the Custom Code Migration app, which focuses on code compatibility.

* C. Gathering the number of active business functions in the customer's system and whether they are compatible with SAP S/4HANA: This is incorrect. Business function compatibility is assessed via the SAP Readiness Check or Simplification Item Check, not the Custom Code Migration app, which targets custom code.

* D. Checking customer-defined artifacts against the simplification database to analyze which items do NOT comply with SAP S/4HANA: This is correct. The app compares custom artifacts against the S/4HANA simplification database, flagging non-compliant items (e.g., obsolete transactions, tables) that need adjustment.

In summary, the Custom Code Migration app delivers A (Gathering statistical information about development objects) and D (Checking customer-defined artifacts against the simplification database).

NEW QUESTION # 30

In which tool can you enable a customer-specific field to be available for UIs and reports relevant for the same business context?

- A. Custom Fields app
- B. Runtime Authoring mode (Adapt UI)
- C. Extensibility Inventory app

- D. Custom CDS Views app

Answer: A

Explanation:

To enable a customer-specific field to be available for UIs and reports relevant for the same business context, you should use the Custom Fields app. This app allows key users to create and manage custom fields that can be integrated into various user interfaces and reports within the same business context.

Option A: Runtime Authoring mode (Adapt UI)

This option is incorrect. The Adapt UI feature allows for the modification of existing user interfaces but does not facilitate the creation of new custom fields across different applications.

Option C: Custom CDS Views app

This option is incorrect. The Custom CDS Views app enables the creation of custom Core Data Services views for reporting purposes but does not support the creation of custom fields for UIs.

Option D: Extensibility Inventory app

This option is incorrect. The Extensibility Inventory app provides an overview of existing extensions but does not offer functionality for creating or enabling custom fields.

In summary, the Custom Fields app is the appropriate tool for creating customer-specific fields that are accessible across UIs and reports within the same business context in SAP S/4HANA Cloud Private Edition.

NEW QUESTION # 31

After integration requirements have been finalized, what is used to analyze, design, and document the integration strategy?

- A. SAP Business Accelerator Hub
- B. Integration and API List
- C. SAP Integration Solution Advisory Methodology
- D. SAP Cloud ALM Requirements app

Answer: C

Explanation:

After finalizing integration requirements, the SAP Integration Solution Advisory Methodology (ISA-M) is utilized to analyze, design, and document the integration strategy. ISA-M provides a structured approach to developing integration guidelines and best practices tailored to the organization's needs.

Option A: SAP Cloud ALM Requirements app

This option is incorrect. The Requirements app in SAP Cloud ALM is used for managing project requirements but does not specifically focus on integration strategy design.

Option B: Integration and API List

This option is incorrect. The Integration and API List provides information on available integrations and APIs but does not offer a methodology for designing integration strategies.

Option D: SAP Business Accelerator Hub

This option is incorrect. SAP Business Accelerator Hub is a repository for APIs and integration content but does not provide tools for analyzing or designing integration strategies.

In summary, the SAP Integration Solution Advisory Methodology is the appropriate framework for analyzing, designing, and documenting integration strategies after requirements have been finalized.

NEW QUESTION # 32

Which technologies should you use to integrate SAP S/4HANA Cloud Private Edition with an SAP public cloud solution? Note: There are 2 correct answers to this question.

- A. SAP Process Orchestration
- B. SAP Connectivity service
- C. SAP HANA Cloud
- D. SAP Integration Suite

Answer: A,D

Explanation:

To integrate SAP S/4HANA Cloud Private Edition with an SAP public cloud solution, the following technologies are recommended:

Option A: SAP Connectivity service

This option is incorrect. The SAP Connectivity service facilitates secure communication between cloud applications and on-premise systems but is not the primary tool for integrating SAP S/4HANA Cloud Private Edition with public cloud solutions.

Option B: SAP Integration Suite

This option is correct. SAP Integration Suite is a comprehensive integration platform-as-a-service (iPaaS) that enables seamless integration between SAP S/4HANA Cloud Private Edition and other SAP public cloud solutions. It offers pre-built integration content and tools to manage various integration scenarios.

Option C: SAP Process Orchestration

This option is correct. SAP Process Orchestration is an on-premise middleware platform that supports integration processes and can be used to integrate SAP S/4HANA Cloud Private Edition with other SAP solutions. However, it is generally recommended to use cloud-based integration platforms like SAP Integration Suite for cloud-to-cloud integrations.

Option D: SAP HANA Cloud

This option is incorrect. SAP HANA Cloud is a cloud-based data management platform and is not specifically designed for integration purposes.

In summary, SAP Integration Suite and SAP Process Orchestration are suitable technologies for integrating SAP S/4HANA Cloud Private Edition with SAP public cloud solutions, with SAP Integration Suite being the preferred choice for cloud-to-cloud integrations.
