SAP C-SEC-2405 Practice Engine & C-SEC-2405 Reliable Source

Itcertking is the only one able to provide you the best and fastest updating information about SAP Certification C-SEC-2405 Exam. Other websites may also provide information about SAP certification C-SEC-2405 exam, but if you compare with each other, you will find that Itcertking provide the most comprehensive and highest quality information. And most of the information of other websites comes mainly from Itcertking.

SAP Certified Associate - Security Administrator Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which cloud-based SAP solution helps organizations control their data across various cloud platforms and on-premise data sources?

- A. SAP Privacy Governance
- B. SAP Identity Access Governance
- C. SAP Data Custodian
- D. SAP Information Steward

Answer: C

Explanation:

SAP Data Custodian is the cloud-based SAP solution designed to help organizations control their data across various cloud platforms and on-premise data sources. It provides a centralized framework for data governance, enabling organizations to monitor,

manage, and secure data throughout its lifecycle, regardless of where it resides. SAP Data Custodian ensures compliance with data protection regulations by offering tools for data discovery, classification, and access control, making it ideal for hybrid environments. In contrast, SAP Identity Access Governance focuses on managing user access and permissions, SAP Information Steward is used for data quality and profiling, and SAP Privacy Governance addresses privacy compliance. SAP Data Custodian's unique capability to unify data control across diverse platforms makes it the correct choice for comprehensive data management and security.

NEW QUESTION # 33

Your developer has created a new custom transaction for your SAP S/4HANA on-premise system and has provided you a list of the authorizations needed to execute the new ABAP program. What must you do to ensure that each required authorization is automatically created every time this new custom transaction is added to a PFCG role?

- **A. Maintain each authorization object in transaction SU24 and set the Default Status to "Yes".**
- B. Maintain each authorization in transaction SU22 and set the Check Indicator value to "Check".
- C. Maintain each authorization in transaction SU24 and set the Default Status to "Yes".
- D. Maintain each authorization object in transaction SU22 and set the Default Status to "Yes".

Answer: A

Explanation:

To ensure that required authorizations for a new custom transaction in SAP S/4HANA on-premise are automatically created when the transaction is added to a PFCG role, you must maintain each authorization object in transaction SU24 and set the Default Status to "Yes". SU24 is used to define authorization defaults for transactions, specifying which authorization objects and values should be proposed when the transaction is included in a role. Setting the Default Status to "Yes" ensures that these objects are automatically included in the role's authorization data during PFCG maintenance, streamlining role creation and ensuring consistency.

Transaction SU22 is for SAP-delivered defaults, not custom transactions, making options A and B incorrect.

Option C is incorrect because SU24 maintains authorization objects, not individual authorizations. This configuration in SU24 supports efficient and secure role management, reducing manual effort and ensuring that the custom transaction's authorization requirements are consistently applied across roles, aligning with SAP's best practices for custom development.

NEW QUESTION # 34

In SAP HANA Cloud, what can you configure in user groups? Note: There are 2 correct answers to this question.

- **A. Password policy settings**
- B. Identity providers
- **C. Client connect restrictions**
- D. Authorization privileges

Answer: A,C

Explanation:

In SAP HANA Cloud, user groups provide a mechanism to manage user settings collectively. Administrators can configure client connect restrictions within user groups to control which clients or applications can connect to the database, enhancing security by limiting access to authorized interfaces. Additionally, password policy settings can be defined for user groups, allowing administrators to enforce rules such as password length, complexity, or expiration periods, ensuring compliance with organizational security standards. Authorization privileges, however, are assigned directly to users or roles, not user groups, as groups in SAP HANA Cloud are not used for privilege management. Similarly, identity providers are configured at the system level, not within user groups, as they relate to authentication rather than group-specific settings. These capabilities enable efficient and secure user management in SAP HANA Cloud environments.

NEW QUESTION # 35

Which cybersecurity type does NOT focus on protecting connected devices?

- A. Network security
- **B. Application security**
- C. IoT security
- D. Cloud security

Answer: B

NEW QUESTION # 36

What does SAP recommend you do when you transport a custom leading business role in SAP S/4HANA Cloud Public Edition?

- A. Add all derived business roles as dependencies to the Software Collection.
- B. Add all other leading business roles from the same Line of Business as dependencies to the Software Collection.
- C. Add the pre-delivered business role that was used as a template to create the custom leading business role to the Software Collection.

Answer: C

Explanation:

When transporting a custom leading business role in SAP S/4HANA Cloud Public Edition:

* Include the Template Role (C):

* SAP recommends adding the pre-delivered business role (template) to the software collection.

This ensures that all dependencies and baseline configurations are included during the transport.

* Maintain Consistency:

* Adding the template role ensures that the custom role remains functional across environments and avoids issues related to missing dependencies.
