Microsoft Identity and Access Administrator Sample Questions (Q339-Q344):

NEW QUESTION # 339

Hotspot Question

You have an Azure Active Directory (Azure AD) tenant that has an Azure Active Directory Premium Plan 2 license. The tenant contains the users shown in the following table.

Name	Role
Admin1	Cloud device administrator
Admin2	Device administrator
User1	None

You have the Device Settings shown in the following exhibit.

User1 has the devices shown in the following table.

Name	Operating system	Device identity
Device1	Windows 10	Azure AD joined
Device2	iOS	Azure AD registered
Device3	Windows 10	Azure AD registered
Device4	Android	Azure AD registered

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can join four additional Windows 10 devices to Azure AD.	☐	☐
Admin1 can set Devices to be Azure AD joined or Azure AD registered require Multi-Factor Authentication to Yes .	☐	☐
Admin2 is a local administrator on Device3.	☐	☐

Answer:

Explanation:

Statements	Yes	No
User1 can join four additional Windows 10 devices to Azure AD.	☐	☒
Admin1 can set Devices to be Azure AD joined or Azure AD registered require Multi-Factor Authentication to Yes .	☒	☐
Admin2 is a local administrator on Device3.	☐	☒

Explanation:

Box 1: No

Maximum number of devices: This setting enables you to select the maximum number of Azure AD joined or Azure AD registered devices that a user can have in Azure AD.

Box 2: Yes

You must be assigned one of the following roles to view or manage device settings in the Azure portal:

- * Global Administrator
- * Cloud Device Administrator
- * Global Reader
- * Directory Reader

Box 3: No

Additional local administrators on Azure AD joined devices (Device is Registered not Joined) Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/devices/device-management-azure-portal>

NEW QUESTION # 340

You have an Azure Active Directory (Azure AD) tenant that has multi-factor authentication (MFA) enabled.

The account lockout settings are configured as shown in the following exhibit.

Account lockout

Temporarily lock accounts in the multi-factor authentication service if there are too many denied authentication attempts in a row. This feature only applies to users who enter a PIN to authenticate.

Number of MFA denials to trigger account lockout *

Minutes until account lockout counter is reset *

Minutes until account is automatically unblocked *

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer Area
A user account will be locked out if the user enters the wrong [answer choice] three times.
If a user account is locked, the user can sign in again successfully after [answer choice] minutes.

Answer:

Explanation:

Answer Area
A user account will be locked out if the user enters the wrong [answer choice] three times.
If a user account is locked, the user can sign in again successfully after [answer choice] minutes.

NEW QUESTION # 341

You have an Azure Active Directory (Azure AD) tenant.

You configure self-service password reset (SSPR) by using the following settings:

- Require users to register when signing in: Yes

- Number of methods required to reset: 1

What is a valid authentication method available to users?

- A. an email to an address outside your organization
- B. an FIDO2 security token
- C. a mobile app notification
- D. an email to an address in your organization

Answer: A

Explanation:

When using a mobile app as a method for password reset, like the Microsoft Authenticator app, the following considerations apply:

- When administrators require one method be used to reset a password, verification code is the only option available.
- When administrators require two methods be used to reset a password, users are able to use notification OR verification code in addition to any other enabled methods.

NEW QUESTION # 342

You need to implement on-premises application and SharePoint Online restrictions to meet the authentication requirements and the access requirements.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 343

You have a Microsoft 365 tenant.

Sometimes, users use external, third-party applications that require limited access to the Microsoft 365 data of the respective user.

The users register the applications in Azure Active Directory (Azure AD).

You need to receive an alert if a registered application gains read and write access to the users' email.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Tool to use:

- Azure AD Identity Protection
- Identity Governance
- Microsoft Cloud App Security
- Microsoft Endpoint Manager

Policy type to create:

- App discovery
- App protection
- Conditional access
