Training Microsoft SC-401 Solutions, Premium SC-401 Files

The main reason why people look for Microsoft SC-401 practice test is that these help them to prepare for the exam. Even if you study well but with no idea of the Administering Information Security in Microsoft 365 SC-401 exam pattern, it will be tough to crack the nut. You shall waste your time thinking about the pattern and how to attempt the Administering Information Security in Microsoft 365 SC-401 Exam Questions. On the other hand, if you know the Administering Information Security in Microsoft 365 SC-401 exam questions well, you can use that time to solve the queries and improve your chances to score well in the exam.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q78-Q83):

NEW QUESTION # 78

You have a Microsoft J65 ES subscription.

You need to create a Microsoft Defender for Cloud Apps policy that will detect data loss prevention (DIP) violations. What should you create?

- A. an access policy
- B. an activity policy
- C. a session policy
- D. a file policy

Answer: D

Explanation:

The question asks about creating a Microsoft Defender for Cloud Apps (MCAS / MDA) policy that will detect Data Loss Prevention (DLP) violations.

Understanding the policy types in Defender for Cloud Apps:

File Policy

Used for monitoring and controlling files stored in cloud apps (e.g., SharePoint, OneDrive, Box, Google Drive).

Can detect sensitive information types (like credit cards, SSNs, SWIFT codes) and flag DLP violations.

Can apply governance actions (e.g., quarantine, remove sharing, notify user).

Correct for DLP violation detection.

Activity Policy

Monitors user activities (e.g., login attempts, mass downloads, suspicious behavior).

Not for file content DLP.

Session Policy

Applied through Conditional Access App Control for real-time monitoring/control during a user session.

Used for controlling actions (download, cut/paste) but not for broad DLP scanning of stored files.

Access Policy

Controls access to apps based on conditions (e.g., unmanaged device access).

Not designed for DLP content inspection.

Why File Policy is correct

Since the requirement is:

"detect DLP violations"

That means scanning file content for sensitive information. This is only possible with a File Policy in Microsoft Defender for Cloud Apps.

Reference: File policies in Microsoft Defender for Cloud Apps

NEW QUESTION # 79

HOTSPOT

You need to meet the technical requirements for the confidential documents.

What should you create first, and what should you use for the detection method? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

 **Microsoft**

Create first:

- ☒ A Compliance Manager assessment
- ☒ A content search
- ☒ A DLP policy
- ☐ A sensitive info type
- ☐ A sensitivity label

Use for detection method:

- ☒ Dictionary
- ☒ File type
- ☒ Keywords
- ☒ Regular expression

Answer:

Explanation:

Answer Area

Create first:

A Compliance Manager assessment
A content search
A DLP policy
A sensitive info type
A sensitivity label

Use for detection method:

Dictionary
File type
Keywords
Regular expression

Explanation:

A screenshot of a computer AI-generated content may be incorrect.

Answer Area

Create first:

A Compliance Manager assessment
A content search
A DLP policy
A sensitive info type
A sensitivity label

Use for detection method:

Dictionary
File type
Keywords
Regular expression

To detect and protect confidential documents, we need a custom rule to identify project codes that start with 999 (since they are classified as confidential).

Box 1: A Sensitive Info Type (SIT) allows Microsoft Purview DLP policies to recognize structured data (e.g., project codes). DLP policies require a sensitive info type to detect content based on patterns, keywords, or dictionary terms. A sensitivity label alone does not define detection logic-it is used for classification and protection after content is identified.

Box 2: Since project codes follow a structured 10-digit pattern, we should use a Regular Expression (Regex) to match project codes that start with 999.

Example Regex pattern:

999\d{7}

This pattern detects a 10-digit number starting with "999".

NEW QUESTION # 80

You are implementing Microsoft Purview Advanced Message Encryption for a Microsoft 365 tenant named contoso.com. You need to meet the following requirements:

- * All email to a domain namedabrikam.com must be encrypted automatically.
- * Encrypted emails must expire seven days after they are sent.

What should you configure for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

All email to a domain named fabrikam.com must be encrypted automatically:

- A data connector in the Microsoft Purview portal
- A data loss prevention (DLP) policy in the Microsoft Purview portal
- A mail flow connector in the Exchange admin center
- A mail flow rule in the Exchange admin center

Encrypted emails must expire seven days after they are sent:

- A custom branding template in Microsoft Exchange Online PowerShell
- A label policy in the Microsoft Purview portal
- A mail flow rule in the Exchange admin center
- A sensitive info type in the Microsoft Purview portal

Answer:

Explanation:

Answer Area

All email to a domain named fabrikam.com must be encrypted automatically:

- A data connector in the Microsoft Purview portal
- A data loss prevention (DLP) policy in the Microsoft Purview portal
- A mail flow connector in the Exchange admin center
- A mail flow rule in the Exchange admin center

Encrypted emails must expire seven days after they are sent:

- A custom branding template in Microsoft Exchange Online PowerShell
- A label policy in the Microsoft Purview portal
- A mail flow rule in the Exchange admin center
- A sensitive info type in the Microsoft Purview portal

Explanation:

Answer Area

All email to a domain named fabrikam.com must be encrypted automatically:

- A mail flow rule in the Exchange admin center

Encrypted emails must expire seven days after they are sent:

- A custom branding template in Microsoft Exchange Online PowerShell

Requirement 1 - Encrypt all email to fabrikam.com automatically

To force encryption for mail sent to a specific external domain (fabrikam.com):

You configure a mail flow rule (transport rule) in the Exchange admin center (EAC).

This rule can apply Office Message Encryption (OME) automatically when messages match conditions such as recipient domain.

Reference: Define mail flow rules to encrypt email messages

Correct choice: A mail flow rule in the Exchange admin center

Requirement 2 - Encrypted emails must expire after 7 days

To configure expiration and access control over encrypted emails:

You use Microsoft Purview sensitivity labels with encryption settings.

A label policy in the Purview portal can enforce encryption, set access rights, and define expiration (e.g., revoke access after 7 days).

Sensitive info types or mail flow rules cannot configure expiration.

Reference: Configure encryption settings for sensitivity labels

Correct choice: A label policy in the Microsoft Purview portal

NEW QUESTION # 81

You are reviewing policies for the SharePoint Online environment.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

 **Microsoft**

Statements

	Yes	No
If a user creates a file in Site4 on January 1, 2021, users will be able to access the file on January 15, 2023.	☒	☐
If a user deletes a file from Site4 that was created on January 1, 2021, an administrative user will be able to recover the file on April 15, 2023.	☐	☐
If a user deletes a file from Site4 that was created on January 1, 2021, an administrative user will be able to recover the file on April 15, 2026.	☐	☐

Answer:

Explanation:

Answer Area

 **Microsoft**

If a user deletes a file from Site4 that was created on January 1, 2021, an administrative user will be able to recover the file on April 15, 2023.	☐	☐
If a user deletes a file from Site4 that was created on January 1, 2021, an administrative user will be able to recover the file on April 15, 2026.	☐	☒

NEW QUESTION # 82

You have a Microsoft 365 subscription. Auditing is enabled.

A user named User1 is a member of a dynamic security group named Group1.

You discover that User1 is no longer a member of Group1.

You need to search the audit log to identify why User1 was removed from Group1.

Which two activities should you use in the search? To answer, select the appropriate activities in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Search

Results

Activities Date IP address User Activity Item

Show results for all activities

Clear all to show results for all activities

Search

User administration activities

Added user

Reset user password

Updated user

Azure AD group administration activities

Added group

Added member to group

Application administration activities

Added service principal

Removed credentials from a service principal

Deleted user

Changed user password

Set property that forces user to change password

Updated group

Removed member from group

Removed a service principal from the directory

Added delegation entry

Set user properties

Changed user license

Deleted group

Set delegation entry

Added credentials to a service principal
