Everybody wants success, but not everyone has a strong mind to persevere in study. If you feel unsatisfied with your present status, our SCP-NPM actual exam can help you out. Our products always boast a pass rate as high as 99%. Using our SCP-NPM study materials can also save your time in the exam preparation. If you choose our SCP-NPM Test Engine, you are going to get the SCP-NPM certification easily. Just make your choice and purchase our study materials and start your study right now!

SolarWinds Network Performance Monitor (NPM) is a powerful tool that network administrators use to monitor and manage their network infrastructure. The SCP-NPM (SolarWinds Certified Professional for Network Performance Monitor) exam is designed to test the knowledge and skills of professionals who work with this tool. SCP-NPM exam covers a range of topics related to NPM, including installation, configuration, monitoring, and troubleshooting.

SolarWinds SCP-NPM certification exam covers a wide range of topics related to network performance monitoring, such as network availability, bandwidth utilization, device health, and network traffic analysis. SCP-NPM Exam is designed to test an individual's knowledge of the SolarWinds NPM platform, including its features, functionality, and best practices for network monitoring. Additionally, the SCP-NPM certification exam assesses a candidate's ability to troubleshoot issues related to network performance and apply solutions using the SolarWinds NPM platform.

SCP-NPM Download Pdf | Real SCP-NPM Dumps Free

One of the biggest challenges of preparing for a SolarWinds SCP-NPM certification exam is staying motivated. It is easy to get bogged down by all the material you need to learn and lose sight of your goal. That is why our SolarWinds SCP-NPM PDF and practice tests are designed to be engaging and easy to understand.

To prepare for the SCP-NPM Exam, candidates should have a solid understanding of networking concepts and protocols, as well as experience working with SolarWinds NPM. They should be familiar with the tool's user interface, monitoring capabilities, and reporting features. Additionally, candidates should have experience with troubleshooting network issues and working with network devices such as routers, switches, and firewalls.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16
You need to build an Orion Map to show the relationships and connections between your Cloud servers and on premise infrastructure. You add the nodes but discover thatthe Orion Platform is not automatically mapping the connection between your cloud server and on premise router. You have verified that layer 2 and layer 3 topologies are being polled on the devices. How do you resolve this issue?

- A. You need to open the topology ports in your firewall between the on premise node and the cloud node
- B. You cannot monitor the connection between on premise and off premise devices
- C. You need to configure a custom connection between the cloud node and the on premise node
- D. You need to turn off layer 2 and layer 3 topology polling for cloud monitoring

Answer: C

Explanation:
Sometimes, the Orion Platform may not be able to automatically map the connection between your cloud server and on premise router, even if layer 2 and layer 3 topologies are being polled on the devices. This may happen if the devices are separated by a firewall, a VPN, or a NAT device that prevents the Orion Platform from discovering the link information. In such cases, you can manually create a custom connection between the cloud node and the on premise node on the Orion Map. You can also edit the properties of the custom connection, such as the name, the status, the bandwidth, and the utilization. By creating a custom connection, you can visualize and monitor the connection between your cloud server and on premise router on the Orion Map12.

NEW QUESTION # 17
You run ten reports on three assorted weekly schedules and send the results to the network operations distribution list. The email address for the distribution list changed, and you must update the new email address to send the reports. How do you implement this update?

- A. Make a copy of each report, edit the action to change the email address
- B. Edit each action on each report schedule, and change the email address
- C. Use the Schedule Manager to edit each action on each report schedule, and change the email address
- D. Use the Action Manager to edit each action on each report schedule, and change the email address

Answer: B

NEW QUESTION # 18
Network performance over an inter-campus Ethernet link is slow. One side of the connection is experiencing a high number of packet drops. What information in NPM can you review to help discover the cause of the issue?

- A. Possible Duplex Mismatches

- B. MTU of each side of the link
- C. Routing tables on each side of the link
- D. Packet loss on the nodes on either side of the connection

Answer: D

Explanation:
Packet loss is a measure of how many packets are lost or discarded during transmission over a network. Packet loss can cause network performance issues such as slow response time, jitter, and degraded voice quality. NPM can monitor packet loss on nodes and interfaces using ICMP ping or SNMP statistics. You can review the packet loss metrics on the Node Details or Interface Details views, or create a custom chart or report to compare packet loss across multiple nodes or interfaces. By reviewing the packet loss on the nodes on either side of the connection, you can identify which node or interface is experiencing the problem and troubleshoot the root cause. You can also use the Performance Analysis dashboard (PerfStack) to correlate packet loss with other metrics such as response time, CPU load, memory usage, buffer misses, and interface errors123. NEW QUESTION # 19
You receive traps from your network devices and want to alert on a select message. How do you accomplish this?

- A. You cannot alert on traps through the Orion Platform
- B. Use Traps in Orion Alerts to configure the default trap alert to fire on the trap message you select to alert on
- C. Go to the Traps view and configure a new Log Viewer rule
- D. Configure Syslog alert actions on the Alert Actions tab

Answer: B

Explanation:
Traps are unsolicited messages sent by network devices to report events or issues. The Orion Platform can receive and process traps from any device that supports SNMP. To alert on a select message, you can use the Traps in Orion Alerts feature, which allows you to configure the default trap alert to fire on the trap message you select to alert on. You can also customize the alert conditions, actions, and triggers to suit your needs. For example, you can alert on traps that match a specific OID, source, or severity, and send an email, log a ticket, or run a script when the alert is triggered. NEW QUESTION # 20
What is the most time-efficient way to create a report in NPM that shows the top 50 interfaces by percent utilization?

- A. Create a new advanced SQL query report
- B. Edit the default top 25 interfaces by percent utilization report and update to the top 50
- C. Create an interface report and use a filter to restrict to the top 50
- D. Run the default top 25 interfaces by percent utilization report for different timeframes

Answer: B

Explanation:
NPM provides a default report called Top 25 Interfaces by Percent Utilization that shows the interfaces with the highest average utilization over the selected time period1. This report can be easily edited to change the number of interfaces displayed, the time period, the sorting order, the layout, and the filters2. To create a report that shows the top 50 interfaces by percent utilization, you can simply edit this report and change the Limit option from 25 to 503. This is the most time-efficient way to create the report, as it does not require creating a new report from scratch, writing a SQL query, or running the report multiple times for different timeframes.
