SCP-NPM Top Dumps & SCP-NPM Valid Test Preparation

As we all know, it is a must for all of the candidates to pass the exam if they want to get the related SCP-NPM certification which serves as the best evidence for them to show their knowledge and skills. If you want to simplify the preparation process, here comes a piece of good news for you. We will bring you integrated SCP-NPM Exam Materials to the demanding of the ever-renewing exam, which will be of great significance for you to keep pace with the times.

SolarWinds SCP-NPM certification exam is an excellent way for IT professionals to demonstrate their expertise in network performance monitoring and management. It validates the candidate's skills and knowledge of SolarWinds NPM and their ability to use it effectively to monitor and manage network performance. SCP-NPM Exam covers a wide range of topics and is designed for professionals with at least one year of experience in network performance monitoring and management.

SCP-NPM Valid Test Preparation - Exam Dumps SCP-NPM Collection

If you care about your qualification exams and have some queries about SCP-NPM preparation materials, we are pleased to serve for you, you can feel free to contact us via email or online service about your doubt. Our company are established more than 10

years, our quality of SCP-NPM valid practice test questions are the leading position in this filed. We believe our SCP-NPM exam guide will help you pass exam easily without too much spirit & time. All our SCP-NPM training materials are compiled painstakingly.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27
Users report that email is slow. The Exchange team reports that everything is normal on the mail servers. What NPM statistic can you look at to find what might be causing the issue?

- A. Network bandwidth utilization
- B. Mail queue length on the Exchange server
- C. Server component monitor status
- D. SMTP service on the Exchange server

Answer: A

Explanation:
NPM can monitor the network bandwidth utilization of your devices, interfaces, and applications using SNMP and NetFlow protocols. Network bandwidth utilization is the amount of data transmitted or received over a network link in a given time period. High network bandwidth utilization can indicate network congestion, packet loss, latency, or other performance issues that can affect the email delivery speed. By looking at the network bandwidth utilization of the devices and interfaces involved in the email communication, you can identify the possible bottlenecks or sources of network problems that might be causing the email slowness. References: Monitor network bandwidth utilization in NPM, Network Bandwidth Analyzer Pack, How to Monitor Network Bandwidth Using the Command Line.

NEW QUESTION # 28
You can apply Universal Device Pollers to which object types? (Choose all that apply.)

- A. Volumes
- B. Interfaces
- C. Applications
- D. Nodes

Answer: A,B,D

NEW QUESTION # 29
Which is not true for Device Studio Poller?

- A. Can poll multiple OIDs for a given technology
- B. Can perform logical operations or transformations on the polled data
- C. Polled values are displayed in existing resources
- D. Collects data from Orion Failover Engine or Hot Standby Engines

Answer: C

NEW QUESTION # 30
In which scenario is an agent the best solution?

- A. If hosts in distributed networks have overlapping IP addresses
- B. If you cannot allow ICMP polling on your routers
- C. If Native GLX log file monitoring is required
- D. If the WMI ports are already in use on Linux

Answer: A

Explanation:

An agent is a software component that you can install on a node to collect and send data to the Orion server. Agents are useful when you need to monitor nodes that are behind firewalls, in the cloud, or have overlapping IP addresses. Agents can also provide more detailed information about the node's performance and status than SNMP or WMI. Agents can use either agent-initiated or server-initiated communication, depending on your network configuration and security requirements. Reference: NPM Administrator Guide, page 67; SCP Study Aid - NPM, page 15.

NEW QUESTION # 31

You want to limit a user to only monitor Windows servers and not be able to view other devices that NPM monitors. How can you do this?

- A. View permissions
- B. Account views
- C. Alert limitations
- D. Account limitations

Answer: D

Explanation:
Account limitations are a way of restricting the access of Orion user accounts to specific network objects, such as nodes, interfaces, groups, maps, or alerts. You can use account limitations to limit a user to only monitor Windows servers and not be able to view other devices that NPM monitors. For example, you can create a custom limitation based on the node property Operating System, and select only Windows as the value. Then, you can apply this limitation to the user account or user group that you want to restrict. The other options are not effective ways of limiting user access to specific devices, as they either affect the visibility of the entire view (view permissions), the layout of the view (account views), or the scope of the alerts (alert limitations). Reference:
Limit user access to network areas with account limitations
Create custom account limitations

NEW QUESTION # 32

......

Candidates for the SCP-NPM exam can rely on our practice material because it is of the greatest quality and will assist them in preparing for the SolarWinds certification test successfully on the first try. FreePdfDump's main goal is to offer 100% actual SCP-NPM Exam Questions in order to help applicants clear the SCP-NPM test in a short time. We are confident that our updated SCP-NPM practice questions will help you pass the SolarWinds Network Performance Monitor (NPM) Exam (SCP-NPM) certification exam on the first attempt.
