Under the help of our SCP-NPM exam questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future. As we all know, to make something right, the most important thing is that you have to find the right tool. Our SCP-NPM study quiz is the exact study tool to help you pass the SCP-NPM exam by your first attempt.

You will receive SCP-NPM exam materials immediately after your payment is successful, and then, you can use SCP-NPM test guide to learn. Everyone knows that time is very important and hopes to learn efficiently, especially for those who have taken a lot of detours and wasted a lot of time. Once they discover SCP-NPM study braindumps, they will definitely want to seize the time to learn. At the same time, regardless of which mode you use, SCP-NPM Test Guide will never limit your download times and the number of concurrent users. For the same information, you can use it as many times as you want, and even use together with your friends.

**Hot SCP-NPM Valid Exam Camp Pass Certify | Valid SCP-NPM Exams:
SolarWinds Network Performance Monitor (NPM) Exam**

Our worldwide after sale staff will be online for 24/7 and reassure your rows of doubts on our SCP-NPM exam questions as well as exclude the difficulties and anxiety with all the customers. Just let us know your puzzles and we will figure out together. You can contact with us at any time and we will give you the most professional and specific suggestions on the SCP-NPM Study Materials. What is more, you can free download the demos of the SCP-NPM learning guide on our website to check the quality and validity.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q29-Q34):

NEW QUESTION # 29

What can you use to retrieve a single value in SNMP? (Choose all that apply.)

- A. GET VALUE
- B. GET TABLE
- C. GET NEXT
- D. GET

Answer: C,D

Explanation:

SNMP (Simple Network Management Protocol) is a protocol that allows network managers to monitor and control network devices using a set of standardized messages and data structures. SNMP uses a client-server model, where the network manager (client) sends requests to the network device (server) and receives responses. The network device has an SNMP agent that collects and reports the data using a MIB (Management Information Base), which is a hierarchical database of variables that describe the device's status and configuration. Each variable in the MIB has a unique identifier called an OID (Object Identifier), which is a dot-separated sequence of numbers that follows a tree structure¹².

To retrieve a single value in SNMP, you can use two types of requests: GET and GET NEXT. A GET request asks for the value of a specific OID, and the SNMP agent responds with the value if it exists, or an error if it does not. A GET NEXT request asks for the value of the next OID in the MIB tree, and the SNMP agent responds with the value and the OID of the next variable, or an error if there is no next variable. A GET NEXT request can be useful for discovering the OIDs and values of a device, or for iterating over a table of values³⁴.

A GET VALUE request is not a valid SNMP request, and a GET TABLE request is not a single request, but a series of GET NEXT requests that retrieve all the values in a table . References: 1: SNMP Basics, 2: SNMP Tutorial Part 1 - Understanding MIBs and OIDs, 3: SNMP Tutorial Part 2 - SNMP Get, GetNext, GetBulk, 4: SNMP Commands, : SNMP Table Operations, : SNMP Table Retrieval

NEW QUESTION # 30

How can you extend NPM's monitoring to non-standard devices?

- A. Combining licenses from different products
- B. Using OIDs organized in MIBs
- C. Deploying Orion agents
- D. Polling with non-standard protocols

Answer: B

Explanation:

NPM can monitor a wide range of network devices and infrastructure, including routers, switches, firewalls, servers, and virtual machines. However, some devices may not support standard protocols such as SNMP or WMI, or may have specific metrics that are not monitored out-of-the box by NPM. In such cases, you can extend NPM's monitoring to non-standard devices by using object identifiers (OIDs) organized in management information bases (MIBs). OIDs are numeric strings that uniquely identify a variable in a MIB. MIBs are hierarchical databases that define the properties and values of the variables that can be monitored on a device. By importing device-specific MIBs into the SolarWinds MIB Database, and creating custom pollers based on OIDs from the MIBs, you can monitor any metric that is available on the device. You can also display the polled data in the web console using dedicated or existing resources¹². Reference:

Create custom monitors in NPM - SolarWinds
SCP Study Aid - SolarWinds (page 10)

NEW QUESTION # 31

Which statistic should you use to determine peak network traffic?

- A. Protocol distribution
- B. Packet loss
- **C. Bandwidth usage**
- D. Network latency

Answer: C

Explanation:

Bandwidth usage is the amount of data transferred over a network connection in a given time period. It is an indicator of how much traffic is flowing through a network device or link. Peak network traffic is the highest level of bandwidth usage that occurs during a specific time interval, such as an hour, a day, or a week. Monitoring peak network traffic can help you identify potential bottlenecks, plan for capacity, and optimize network performance. NPM can monitor bandwidth usage on nodes and interfaces using SNMP, WMI, or NetFlow protocols. You can view bandwidth usage charts and reports in the web console, as well as set alerts and thresholds for bandwidth utilization. Reference: Monitor bandwidth usage in NPM; SCP Study Aid - NPM, page 11.

NEW QUESTION # 32

You add several nodes for monitoring and can see detailed information on those nodes in the Orion Web Console. However, when you look at the nodes in Orion Maps, the connections between the nodes are not showing. What is a likely reason?

- A. You did not add the node topology OIDs to the MIB database
- **B. You did not enable Layer 2 and Layer 3 topology polling on those nodes**
- C. You did not enable SNMP polling
- D. A firewall is blocking polling between the nodes and the Orion server

Answer: B

NEW QUESTION # 33

You use NPM to monitor a set of physical servers. The server team decides to virtualize these servers using VMware. Which part of your virtual infrastructure will NPM no longer be able to monitor?

- **A. Virtualization environment tree**
- B. Virtualization host and VM performance metrics
- C. Virtualization host hardware health
- D. VM sprawl monitoring

Answer: A

Explanation:

NPM can monitor the virtualization host hardware health, VM sprawl, and virtualization host and VM performance metrics using the Virtualization Manager Integration feature¹. However, NPM cannot display the virtualization environment tree, which shows the hierarchical relationship between the virtualization hosts, clusters, datastores, and VMs. This feature is only available in Virtualization Manager², a separate product that can be integrated with NPM. References: 1: Network Performance Monitor Administrator Guide - Monitor virtual infrastructure 2: Virtualization Manager Getting Started Guide - View the virtualization environment tree

NEW QUESTION # 34

.....

If you want to pass the SCP-NPM exam and get the related certification in the shortest time, choosing the SCP-NPM training materials from our company will be in the best interests of all people. We can make sure that it will be very easy for you to pass your SCP-NPM exam and get the related certification in the shortest time that beyond your imagination. You can know the instructions on the SCP-NPM Certification Training materials from our web. And you can also free download the demo of our SCP-NPM exam questions to check before your payment.
