Scrum Professional Scrum Product Owner II Sample Questions (Q78-Q83):

NEW QUESTION # 78

You work for a large financial institution. Your products have many interdependencies: you have mobile, web, and ATM product interfaces to financial products like savings, checking, spending, electronic payments, credit cards, and investments. When any of these financial products change, the changes ripple throughout the mobile, web, and ATM clients, and maintaining consistency is challenging. What should you do to reduce this problem?

(choose the best answer)

- A. All of the above.
- B. Form products that are as independent as possible and let each product determine their own release plans, but ensure coordination.
- C. Appoint a Project Lead to oversee all the products.
- D. Create a centralized, coordinated cross-product Development Plan to ensure consistency.
- E. Ensure that the PMO manages the inter-product dependencies.

Answer: B

Explanation:

A is correct because forming products that are as independent as possible reduces the complexity and dependency of the product development, and allows each product to deliver value faster and more frequently¹. Coordination among the products is still necessary to ensure alignment and consistency, but it should not be centralized or imposed by a higher authority². B is incorrect because creating a centralized, coordinated cross-product Development Plan goes against the principles of empiricism, self-organization, and agility that Scrum promotes³. C is incorrect because appointing a Project Lead to oversee all the products undermines the accountability and autonomy of the Product Owners and the Scrum Teams⁴. D is incorrect because ensuring that the PMO manages the inter-product dependencies creates a layer of bureaucracy and control that hinders the collaboration and innovation of the Scrum Teams⁵. E is incorrect because it includes all the wrong answers.

NEW QUESTION # 79

As a Product Owner you become aware that the quality assurance criteria, defined in the Definition of Done, were not met for the latest Increment. Which of the following statements are true?

(choose the best four answers)

- A. The indication of progress on the Product Backlog is not transparent.
- B. The Scrum Team should not release the Increment.
- C. The next Sprint may be interrupted when quality issues are encountered.
- D. The project manager cannot effectively update the plan.
- E. The incomplete Sprint Backlog items should be returned to the Product Backlog.

Answer: A,B,C,E

Explanation:

According to the Professional Scrum Product Owner™ II certification guide¹, the Definition of Done is a formal description of the state of the Increment when it meets the quality measures required for the product. The Definition of Done creates transparency by

providing everyone a shared understanding of what work was completed and what standards were met as part of the Increment. If the Definition of Done is not met, the Increment is not Done and cannot be released. Therefore, the following statements are true:
A) The next Sprint may be interrupted when quality issues are encountered. This is true because the Scrum Team may have to spend time fixing the quality issues in the previous Increment before working on the new Sprint Backlog items. This may affect the Sprint Goal and the delivery of value.

C) The indication of progress on the Product Backlog is not transparent. This is true because the Product Backlog items that were supposedly Done in the previous Sprint are actually not Done according to the Definition of Done. This means that the Product Owner cannot accurately forecast the release plan and the stakeholders cannot trust the progress reports.

D) The Scrum Team should not release the Increment. This is true because releasing an Increment that does not meet the Definition of Done may compromise the quality, usability, and value of the product. It may also damage the reputation and trust of the Scrum Team and the organization.

E) The incomplete Sprint Backlog items should be returned to the Product Backlog. This is true because the Sprint Backlog items that were not Done according to the Definition of Done are still part of the Product Backlog. The Product Owner should re-order them based on their value and priority and decide when to include them in the next Sprint.

The following statement is false:

B) The project manager cannot effectively update the plan. This is false because there is no project manager role in Scrum. The Product Owner is responsible for managing the Product Backlog and the value delivery, while the Scrum Master is responsible for facilitating the Scrum process and removing impediments. The Developers are responsible for managing the Sprint Backlog and the quality of the Increment.

NEW QUESTION # 80

Which of the following measures might help you determine whether your product is delivering value to your customer?
(choose the best answer)

- A. All of the above.
- B. The number of "must-do" Product Backlog items delivered in a release.
- C. None of the above.
- D. The average cost of your product release.
- E. The on-schedule performance of the Scrum Team.
- **F. How often your customers use your product.**

Answer: F

Explanation:

The value of a product is not determined by how many features it has, how much it costs, or how fast it is delivered, but by how well it meets the needs and expectations of the customers and stakeholders. Therefore, the best measure of value is how often and how effectively the customers use the product to achieve their goals and solve their problems. This can be assessed by using metrics such as customer satisfaction, retention, engagement, loyalty, referrals, revenue, or any other indicators that reflect the desired outcomes and benefits of the product.

The other options are not the best measures of value, because they either focus on the output rather than the outcome, or they do not reflect the customer perspective. The number of "must-do" Product Backlog items delivered in a release may indicate the scope or the quality of the product, but not necessarily the value. The average cost of the product release may indicate the efficiency or the profitability of the product, but not necessarily the value. The on-schedule performance of the Scrum Team may indicate the predictability or the agility of the product development process, but not necessarily the value. NEW QUESTION # 81

When many Scrum Teams are working on the same product, should all of their Increments be combined every Sprint?
(choose the best answer)

- A. No, that is far too hard and must be done in a hardening Sprint.
- **B. Yes, otherwise the Product Owner and stakeholders are unable to accurately inspect the Increment.**
- C. Yes, but only for Scrum Teams whose work has dependencies.
- D. No, each Scrum Team stands alone.

Answer: B

Explanation:

When multiple Scrum Teams are working on the same product, it is essential that all of their Increments be combined every Sprint.
