Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which card would you most likely connect to the AOM module (AOM-GP401-PCIE)?

- A. Debit card
- B. AOC NIC card
- C. AOM card
- D. Credit card

Answer: B

NEW QUESTION # 24

What must be removed first, in order to remove the BMC cable and IO Module from the PCIe tray?

- A. The PCIe tray
- B. The AOM cage
- C. The BMC cage
- **D. The AOC cage**

Answer: D

Explanation:

The BMC (Baseboard Management Controller) cable and IO Module in Supermicro systems like the SYS-421GE-TNHR2-LCC are often tied to add-on cards (AOC) within the PCIe tray. The AOC cage (likely an Add-On Card cage) must be removed first to access these components, as it houses cards and cables interfacing with the BMC. Supermicro's design (e.g., SYS-420 series) places AOC cages as sub-assemblies within the PCIe tray, requiring removal before deeper access. A (AOM cage) may be a typo or misidentification, B (BMC cage) isn't standard terminology here, and C (PCIe tray) is too broad since it's the parent assembly. D fits Supermicro's DLC service hierarchy, making it correct. References: Supermicro PCIe tray sub-assembly guides, DLC system component access.

NEW QUESTION # 25

Where in the chassis are the internal fans and fan housing located?

- A. In the middle of the PCIe tray
- **B. In the middle of the motherboard tray**
- C. In the back of the motherboard tray
- D. In the back of the PCIe tray

Answer: B

Explanation:

In Supermicro systems like the SYS-421GE-TNHR2-LCC, internal fans and their housing are typically located in the middle of the motherboard tray, providing airflow across CPUs and memory, even in DLC setups where liquid cooling handles primary heat removal. This placement, seen in similar systems (e.g., SYS-420GP-TNAR), balances cooling distribution. A and B (PCIe tray) focus on GPU cooling, not motherboard fans, while C (back of motherboard tray) is less common due to PSU placement. Supermicro's DLC hybrid designs integrate fans centrally on the motherboard tray, making D correct. References: Supermicro chassis layouts, DLC hybrid cooling configurations.

NEW QUESTION # 26

When reseating the PCIe tray, how do you know when the PCIe tray has been correctly inserted all the way back into the system?

- A. The levers on each side of the front of the PCIe tray that were in the down position should move up slightly
- B. The front of the PCIe tray should be slightly sticking out of the system
- C. The levers on each side of the front of the PCIe tray that were in the up position should move down slightly
- **D. The levers on each side of the front of the PCIe tray that were in the down position should move up all the way into the locked position automatically**

Answer: D

Explanation:

Reseating the PCIe tray in a Supermicro system like the SYS-421GE-TNHR2-LCC involves aligning it with the chassis and locking it in place. Per Supermicro's design (e.g., SYS-420GP-TNAR), the tray has levers that start in the down (unlocked) position during insertion. When fully seated, these levers automatically move up to the locked position, clicking into place to secure the tray and ensure proper connection to power and cooling (e.g., DLC manifolds). Option A (sticking out) indicates incomplete insertion, B (slightly up) is insufficient, and C (up to down) reverses the mechanism. D reflects Supermicro's DLC system precision, ensuring tray stability. References: Supermicro PCIe tray installation guides, DLC component alignment standards.

NEW QUESTION # 27

Before the fan board can be removed from the motherboard tray, all 4 of the fans' power connectors must be disconnected. True or False.

- A. False
- **B. True**

Answer: B

Explanation:

In Supermicro systems like the SYS-421GE-TNHR2-LCC, the fan board connects multiple fans (often 4 in high-end setups) to the motherboard tray. Removing the fan board requires disconnecting all 4 fans' power connectors first to avoid damage or electrical hazards, a standard step in Supermicro's service guides (e.g., SYS-420GP-TNAR). Even in DLC systems, where liquid cooling dominates, fans supplement air cooling, and their power must be safely disconnected. True (A) reflects Supermicro's safety and maintenance protocols, making it correct over B.
