Reliable SDLCSA Exam Cram Pdf to Obtain Supermicro Certification

These formats hold high demand in the market and offer a great solution for quick and complete Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam (SDLCSA) exam preparation. These formats are SDLCSA PDF dumps, web-based practice test software, and desktop practice test software. All these three Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam (SDLCSA) exam questions contain the real, valid, and updated Supermicro Exams that will provide you with everything that you need to learn, prepare and pass the challenging but career advancement SDLCSA certification exam with good scores.

Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27

What are the full steps and proper order for removing the motherboard tray from the chassis of the SYS-421GE-TNHR2-LCC system?

- A. Loosen 2 screws on both ends of the front of the chassis to loosen the latches > Pull down on the latches until the latches release completely > Slowly start pulling the tray out > Release the safety latches on both sides > Lift and move the quick connect cables out of the way > Continue pulling out the tray the rest of the way
- B. Loosen 12 screws on both ends of the front of the chassis to loosen the latches > Slowly start pulling the tray out > Continue pulling out the tray the rest of the way
- C. Loosen 8 screws on both ends of the front of the chassis to loosen the latches > Continue pulling out the tray the rest of the way
- D. Pull down on the latches until the latches release completely > Slowly start pulling the tray out > Release the safety latches on both sides

Answer: A

Explanation:

Removing the motherboard tray from the SYS-421GE-TNHR2-LCC involves:

- * Loosen 2 screws on both ends of the front of the chassis: Secures latches, per Supermicro's design (e.g., SYS-420GP-TNAR).
- * Pull down on the latches until they release completely: Frees the tray.
- * Slowly start pulling the tray out: Initiates removal.
- * Release the safety latches on both sides: Prevents dropping (DLC safety feature).
- * Lift and move the quick connect cables: Clears DLC coolant or power lines.
- * Continue pulling out the tray: Completes removal. Option D is the most comprehensive, matching Supermicro's DLC system protocols. A skips screws and cables, B (12 screws) and C (8 screws) exaggerate screw count, lacking safety steps. D ensures safe, complete removal. References: Supermicro motherboard tray removal guides, DLC system safety features.

NEW QUESTION # 28

Where is the air shroud located on the PCIe tray?

- A. On the top / right side of the PCIe tray
- B. On the top / center of the PCIe tray
- C. On the bottom of the PCIe tray
- D. On the top / left side of the PCIe tray

Answer: B

Explanation:

The air shroud on the PCIe tray in Supermicro systems like the SYS-421GE-TNHR2-LCC is positioned to optimize airflow or assist liquid cooling efficiency in hybrid setups. Per Supermicro's design (e.g., SYS-420GP-TNAR), the shroud is located on the top/center of the PCIe tray, covering the cards to direct cooling effectively across components. This central placement ensures even distribution, critical in DLC systems where air may still cool non-liquid-cooled parts. Options B and D (right/left) are less practical for uniform coverage, and A (bottom) contradicts standard shroud placement above components. Supermicro's DLC expertise integrates air shrouds strategically, making C the verified location. References: Supermicro PCIe tray diagrams, DLC solution design principles.

NEW QUESTION # 29

What 2 add-on component(s) are located inside the side bracket of the SYS-421GE-TNHR2-LCC?

- A. AOC NIC card and PCIe card
- B. AOM-PCIe card and GPU card
- C. GPU card and PCIe card
- **D. AOM-PCIe card and AOC NIC card**

Answer: D

Explanation:

The side bracket in the SYS-421GE-TNHR2-LCC likely houses networking or management add-ons. The AOM-PCIe card(e.g., AOM-GP401-PCIE module) and AOC NIC card(network interface card) are common components in Supermicro's DLC systems, enhancing connectivity (e.g., high-speed NICs for AI workloads).

A (GPU/PCIe) mixes unrelated categories, C pairs an AOM with a GPU (less likely), and D (AOC/PCIe) lacks specificity. B aligns with Supermicro's DLC networking focus, making it correct. References:

Supermicro add-on card specs, DLC system networking components.

NEW QUESTION # 30

In order to remove the AOM cage, best describe the location of the 4 screws that need to be removed.

- A. 4 screws on the top, 0 screws on the side
- **B. 2 screws on the top, 2 screws on the side**
- C. 3 screws on the side, 1 screw on the top
- D. 3 screws on the top, 1 screw on the side

Answer: B

Explanation:

The AOM (Add-On Module) cage in the SYS-421GE-TNHR2-LCC is secured with 2 screws on the top and 2 on the side, a balanced approach in Supermicro's modular designs (e.g., SYS-420GP-TNAR). This ensures stability and accessibility in DLC systems. A and B skew placement, while C (all top) ignores side support. D matches Supermicro's chassis engineering, making it correct. References: Supermicro AOM cage specs, DLC system structural design.

NEW QUESTION # 31

What are the three main benefits of Liquid Cooling? (Choose 3 answers)

- **A. Liquid is significantly better at removing heat than air**
- **B. Liquid molecules are closer together and result in a higher heat transfer**
- **C. Liquid is 25 times better at transferring heat**
- D. Liquid is cheaper to implement

Answer: A,B,C

Explanation:

Supermicro's DLC solutions highlight:

* A: Liquid removes heat more effectively than air, a core advantage (e.g., 40% OPEX reduction).

* B: Closer liquid molecules enhance heat transfer, a physical principle in DLC.

* D: Liquid is ~25 times better at heat transfer than air, per Supermicro's technical claims. C (cheaper) is false-DLC has higher initial costs but saves long-term. A, B, D are the verified benefits. References:

Supermicro DLC whitepapers, heat transfer specs.
