SDLCSA Latest Exam Forum & SDLCSA Authorized Pdf

Highlight a person's learning effect is not enough, because it is difficult to grasp the difficulty of testing, a person cannot be effective information feedback, in order to solve this problem, our SDLCSA real exam materials provide a powerful platform for users, allow users to exchange of experience. Here, the all users of our SDLCSA learning reference files can through own id to login to the platform, realize the exchange and sharing with other users, even on the platform and more users to become good friends, encourage each other, to deal with the difficulties encountered in the process of preparation each other. Our SDLCSA learning reference files not only provide a single learning environment for users, but also create a learning atmosphere like home, where you can learn and communicate easily.

SDLCSA exam questions are being offered in three easy-to-use and compatible formats. The Supermicro SDLCSA PDF dumps file, desktop practice test software, and web-based practice test software. All three SDLCSA Exam Questions format contain the Supermicro SDLCSA actual questions and help you in SDLCSA exam preparation entirely.

Top Features of Supermicro SDLCSA PDF Dumps And Practice Test Software

The It-Tests is committed to providing the best possible study material to succeed in the Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam (SDLCSA) exam. With actual PDF questions, customizable practice exams, and 24/7 support, customers can be confident that they are getting the best possible prep material. The It-Tests SDLCSA is an excellent choice for anyone looking to advance their career with the certification. Buy Now.

Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35
To remove an AOC NIC card, simply pull the card straight up. True or False.

- A. False
- B. True

Answer: A

Explanation:
Removing an AOC NIC card in Supermicro systems like the SYS-421GE-TNHR2-LCC requires more than pulling straight up. Per standard procedures (e.g., SYS-420GP-TNAR), you must first unscrew the card from its bracket (1 screw) and release any retaining mechanisms (e.g., PCIe slot latch). Simply pulling risks damage to the card or slot, especially in DLC setups with dense configurations. False (B) reflects Supermicro' s emphasis on careful hardware handling, making it the correct answer.References:Supermicro AOC card removal guides, DLC system component safety.

NEW QUESTION # 36
Which 3 components of the SYS-421GE-TNHR2-LCC does this training discuss break/fix for? (Choose 3 answers)

- A. Motherboard Tray
- B. PCIe Tray
- C. Bluetooth
- D. External Chassis

Answer: A,B,D

Explanation:
The SYS-421GE-TNHR2-LCC, a DLC-enabled server, focuses break/fix training on key physical components per Supermicro's service scope:
* PCIe Tray: Houses GPUs/NICs, critical for DLC cooling (e.g., cold plates on GPUs).
* Motherboard Tray: Contains CPUs and core systems, also liquid-cooled in DLC setups.
* External Chassis: Encloses all components, requiring access for repairs.Bluetooth (C) is a connectivity feature, not a physical component for break/fix in this context, and Supermicro's DLC documentation (e.g., rack-scale solutions) emphasizes trays and chassis. Thus, A, B, and D are the focus.References:
Supermicro DLC solution breakdowns, SYS-420 series service guides.

NEW QUESTION # 37
Which cable needs to be disconnected first, before lifting the fan up and out of the metal housing?

- A. PCIe cable
- B. I2C cable
- C. SATA cable
- D. Power cable

Answer: D

Explanation:
Fans in Supermicro systems, including those with DLC like the SYS-421GE-TNHR2-LCC, are powered by a power cable connecting to the fan board or motherboard. Before removing a fan from its housing, the power cable must be disconnected first to ensure safety and prevent electrical damage, a standard step in Supermicro' s service protocols. PCIe cables (A) connect expansion cards, I2C cables (C) handle communication (not fan power), and SATA cables (D) link storage drives-none are relevant to fan removal. In DLC systems, where fans may supplement liquid cooling, power disconnection remains critical, making B the verified answer.
References: Supermicro fan replacement guides, DLC hybrid cooling safety standards.

NEW QUESTION # 38
What are the full steps and proper order for removing the fan board from the motherboard tray?

- A. Pull the fan board straight up and out of the tray
- B. Disconnect the power supply from all the fans > Pull the fan board straight up and out of the tray
- C. Pull up on the blue levers on each side of the fan board to unlock it > Pull the fan board straight up and out of the tray
- D. Disconnect the power supply from all the fans > Pull up on the blue levers on each side of the fan board to unlock it > Pull the fan board straight up and out of the tray

Answer: D

Explanation:
The fan board in Supermicro systems, including the SYS-421GE-TNHR2-LCC with DLC, manages cooling (even in hybrid air/liquid setups). The removal process, per Supermicro's service manuals, involves:
* Disconnect the power supply from all the fans: This ensures safety and prevents damage, a critical step in DLC systems where fans may supplement liquid cooling.
* Pull up on the blue levers on each side of the fan board to unlock it: Blue levers are a common Supermicro design feature for releasing components securely.
* Pull the fan board straight up and out of the tray: Once unlocked, the board is lifted free.Option B includes all necessary steps. A

skips disconnection and unlocking, C omits the levers, and D misses power disconnection, risking damage. Supermicro's DLC solutionsemphasize safe maintenance, supporting B as the correct procedure.References:Supermicro motherboard tray service guides, DLC system maintenance protocols.

NEW QUESTION # 39
What part on the motherboard tray do you need to remove first, in order to remove the air shroud?

- A. The support bar at the front of the motherboard tray
- B. The support bar in the middle of the motherboard tray
- C. There is no support bar on the motherboard tray that prevents you from removing the air shroud
- D. The support bar at the back of the motherboard tray

Answer: C

Explanation:
In Supermicro systems like the SYS-421GE-TNHR2-LCC, the air shroud on the motherboard tray is typically a lift-off component not obstructed by a support bar. Unlike some designs with structural bars, Supermicro's high-end servers (per manuals like SYS-420GP-TNAR) often feature open tray layouts for easy access, especially in DLC configurations where liquid cooling reducesreliance on complex air channels. Options A, B, and C assume a bar exists and must be removed, but no such requirement is standard. The shroud lifts off after screw removal, making D correct. Supermicro's DLC design simplifies maintenance, supporting this conclusion.References:Supermicro motherboard tray documentation, DLC system accessibility features.

NEW QUESTION # 40
.....

The sources and content of our SDLCSA practice dumps are all based on the real SDLCSA exam. And they are the masterpieces of processional expertise these area with reasonable prices. Besides, they are high efficient for passing rate is between 98 to 100 percent, so they can help you save time and cut down additional time to focus on the SDLCSA Actual Exam review only. We understand your drive of the certificate, so you have a focus already and that is a good start.
