Users can customize the time and SDLCSA questions of Supermicro SDLCSA practice tests according to their needs. You can give more than one test and track the progress of your previous attempts to improve your marks on the next try. These SDLCSA mock tests are made for customers to note their mistakes and avoid them in the next try to pass Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam (SDLCSA) exam in a single try.

We can make sure that if you purchase our SDLCSA exam questions, you will have the right to enjoy our perfect after sale service and the high quality products. So do not hesitate and buy our SDLCSA study guide, we believe you will find surprise from our exam products. And not only you can enjoy the service before you pay for our SDLCSA learning guide, you can also have the right to have free updates for one year after your purchase.

SDLCSA Test Centres - Exam SDLCSA Format

Our SDLCSA exam questions can meet your needs to the maximum extent, and our SDLCSA learning materials are designed to the greatest extent from the customer's point of view. So you don't have to worry about the operational complexity. As soon as you enter the learning interface of our system and start practicing our SDLCSA Learning Materials on our Windows software, you will find small buttons on the interface. It is very easy and convenient to use and find.

Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35

What safety feature prevents the motherboard tray from being removed too quickly and potentially dropped?

- A. A safety cable
- B. A safety switch
- C. A safety pin
- **D. A safety latch**

Answer: D

Explanation:

In Supermicro servers like the SYS-421GE-TNHR2-LCC, the motherboard tray is a critical component, often heavy with CPUs and DLC cold plates. A safety latch is the standard feature to prevent rapid removal and accidental drops, as seen in manuals (e.g., SYS-420GP-TNAR). Latches on both sides must be released deliberately, ensuring controlled extraction. A cable (A) might tether but not prevent speed, a switch (B) controls electronics, and a pin (D) is less common for trays. Supermicro's DLC systems prioritize safe handling, making C the correct safety mechanism.

References: Supermicro motherboard tray removal guides, DLC system safety features.

NEW QUESTION # 36

Aside from ESD gloves, what additional tools do you need to remove a DIMM?

- A. Long-nose pliers (in order to grasp the card)
- B. Torque bit and driver
- C. Screwdriver
- D. No additional tools are needed

Answer: D

Explanation:

Removing a DIMM (memory module) in Supermicro systems like the SYS-421GE-TNHR2-LCC requires only ESD gloves for safety; no additional tools are needed. DIMMs are released by pushing down on slot latches and lifting out by hand, per Supermicro manuals (e.g., SYS-420GP-TNAR). A (pliers) risks damage, B (torque bit) and D (screwdriver) are for screws, not DIMMs. Supermicro's DLC systems maintain standard DIMM serviceability, making C correct. References: Supermicro DIMM replacement guides, DLC system maintenance standards.

NEW QUESTION # 37

To remove an AOC NIC card, simply pull the card straight up. True or False.

- A. False
- B. True

Answer: A

Explanation:

Removing an AOC NIC card in Supermicro systems like the SYS-421GE-TNHR2-LCC requires more than pulling straight up. Per standard procedures (e.g., SYS-420GP-TNAR), you must first unscrew the card from its bracket (1 screw) and release any retaining mechanisms (e.g., PCIe slot latch). Simply pulling risks damage to the card or slot, especially in DLC setups with dense configurations. False (B) reflects Supermicro's emphasis on careful hardware handling, making it the correct answer. References: Supermicro AOC card removal guides, DLC system component safety.

NEW QUESTION # 38

Which card would you most likely connect to the AOM module (AOM-GP401-PCIE)?

- A. AOC NIC card
- B. AOM card
- C. Debit card
- D. Credit card

Answer: A

NEW QUESTION # 39

What is the role of the pump in the D2C liquid-cooled rack?

- A. It boils the liquid and overheats the server
- B. It turns the liquid into different colors based on the mood of the server
- C. It circulates the liquid and is placed directly on the chip to improve flow
- D. It provides air to cool the server

Answer: C

NEW QUESTION # 40

.....
