

SDLCSA Study Guide Pdf–Fast Download Valid Exam Registration for SDLCSA: Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam

DOWNLOAD the newest VerifiedDumps SDLCSA PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1iat3nYjYG50m6bN28vvdOO2-gqCIXPV>

Many candidates felt worried about their exam for complex content and too extensive subjects to choose and understand. Our SDLCSA exam materials successfully solve this problem for them. With the simplified language and key to point subjects, you are easy to understand and grasp all the information that in our SDLCSA training guide. For Our professionals compiled them with the purpose that help all of the customer to pass their SDLCSA exam.

Some candidates may purchase our SDLCSA software test simulator for their companies. They will ask us how many personal computers our soft version can be install. In fact we have no limit for computer quantity. So if you purchase our SDLCSA software test simulator, it supports multi-users at the same time. It can be installed on computers without any limits. If you are a training school, it is suitable for your teachers to present and explain casually. Good SDLCSA software test simulator have high passing rate and VerifiedDumps are looking forward to your long-term cooperation.

Valid Exam SDLCSA Registration, Regular SDLCSA Update

Anyone can try a free demo of the Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam (SDLCSA) practice material before making purchase. There is a 24/7 available support system that assists users whenever they are stuck in any problem or issues. This product is a complete package and a blessing for those who want to pass the Supermicro SDLCSA test in a single try. Buy It Now And Start Preparing Yourself For The Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam (SDLCSA) Certification Exam!

Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

What are the three main benefits of Liquid Cooling? (Choose 3 answers)

- A. Liquid is 25 times better at transferring heat
- B. Liquid molecules are closer together and result in a higher heat transfer
- C. Liquid is significantly better at removing heat than air
- D. Liquid is cheaper to implement

Answer: A,B,C

Explanation:

Supernicro's DLC solutions highlight:

- * A: Liquid removes heat more effectively than air, a core advantage (e.g., 40% OPEX reduction).
- * B: Closer liquid molecules enhance heat transfer, a physical principle in DLC.
- * D: Liquid is ~25 times better at heat transfer than air, per Supernicro's technical claims. C (cheaper) is false-DLC has higher initial costs but saves long-term. A, B, D are the verified benefits. References: Supernicro DLC whitepapers, heat transfer specs.

NEW QUESTION # 29

Where is the air shroud located on the PCIe tray?

- A. On the top / right side of the PCIe tray
- **B. On the top / center of the PCIe tray**
- C. On the bottom of the PCIe tray
- D. On the top / left side of the PCIe tray

Answer: B

Explanation:

The air shroud on the PCIe tray in Supernicro systems like the SYS-421GE-TNHR2-LCC is positioned to optimize airflow or assist liquid cooling efficiency in hybrid setups. Per Supernicro's design (e.g., SYS-420GP-TNAR), the shroud is located on the top/center of the PCIe tray, covering the cards to direct cooling effectively across components. This central placement ensures even distribution, critical in DLC systems where air may still cool non-liquid-cooled parts. Options B and D (right/left) are less practical for uniform coverage, and A (bottom) contradicts standard shroud placement above components. Supernicro's DLC expertise integrates air shrouds strategically, making C the verified location. References: Supernicro PCIe tray diagrams, DLC solution design principles.

NEW QUESTION # 30

How many screws need to be removed from the metal bracket that holds down the LPIO board / BMC cable?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

The LPIO (Low-Profile IO) board and BMC cable in Supernicro systems are typically secured by a minimal number of screws for quick serviceability, a principle in DLC designs like the SYS-421GE-TNHR2-LCC. Based on similar systems (e.g., SYS-420GP-TNAR), the metal bracket holding these components is fastened with 2 screws, balancing security and ease of access. Higher counts like 8 (A), 5 (B), or 6 (D) are excessive for a small bracket, while 2 (C) matches Supernicro's standard for IO-related brackets. In DLC contexts, modularity is key, supporting C as the verified number. References: Supernicro IO board installation guides, DLC system service efficiency.

NEW QUESTION # 31

To remove an AOC NIC card, simply pull the card straight up. True or False.

- **A. False**
- B. True

Answer: A

Explanation:

Removing an AOC NIC card in Supernicro systems like the SYS-421GE-TNHR2-LCC requires more than pulling straight up. Per standard procedures (e.g., SYS-420GP-TNAR), you must first unscrew the card from its bracket (1 screw) and release any retaining mechanisms (e.g., PCIe slot latch). Simply pulling risks damage to the card or slot, especially in DLC setups with dense configurations. False (B) reflects Supernicro's emphasis on careful hardware handling, making it the correct answer. References: Supernicro AOC card removal guides, DLC system component safety.

NEW QUESTION # 32

Before removing the LPIO board from the PCIe tray, what other component needs to be removed first?

- A. GPU tray
- B. Air shroud
- C. Metal bracket
- D. Motherboard tray

Answer: C

Explanation:

The LPIO (Low-Profile IO) board in Supermicro systems like the SYS-421GE-TNHR2-LCC, part of the PCIe tray, is typically secured by a metal bracket that must be removed first. This bracket holds the LPIO board and associated cables (e.g., BMC cable) in place, as seen in similar designs (e.g., SYS-420GP-TNAR). Removing it involves unscrewing (often 2 screws) and lifting it off, granting access to the LPIO board. A (GPU tray) is a separate assembly, C (motherboard tray) is unrelated to the PCIe tray's LPIO, and D (air shroud) covers components but doesn't secure the board. Supermicro's DLC systems emphasize modular access, making B the correct step. References: Supermicro PCIe tray service guides, DLC system IO component layouts.
