Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

Aside from ESD gloves, what additional tools do you need to remove a DIMM?

- A. Screwdriver
- **B. No additional tools are needed**
- C. Torque bit and driver
- D. Long-nose pliers (in order to grasp the card)

Answer: B

Explanation:

Removing a DIMM (memory module) in Supermicro systems like the SYS-421GE-TNHR2-LCC requires only ESD gloves for safety; no additional tools are needed. DIMMs are released by pushing down on slot latches and lifting out by hand, per Supermicro manuals (e.g., SYS-420GP-TNAR). A (pliers) risks damage, B (torque bit) and D (screwdriver) are for screws, not DIMMs. Supermicro's DLC systems maintain standard DIMM serviceability, making C correct. References: Supermicro DIMM replacement guides, DLC system maintenance standards.

NEW QUESTION # 29

Which statement accurately describes the location of the motherboard tray in the chassis of the SYS-421GE- TNHR2-LCC system?

- A. Above the PCIe tray
- B. Above the GPU tray
- **C. Below the PCIe tray**
- D. Below the GPU tray

Answer: C

Explanation:

In Supermicro's SYS-421GE-TNHR2-LCC, the motherboard tray is below the PCIe tray, consistent with high-end server designs (e.g., SYS-420GP-TNAR). The motherboard tray houses CPUs and core components, while the PCIe tray (often with GPUs) sits above, connected via risers or direct slots. Options C and D reference a "GPU tray," likely a misnomer for the PCIe tray, but B remains accurate. Supermicro's DLC systems stack trays vertically for cooling efficiency, confirming B as correct. References: Supermicro chassis layout specs, DLC system tray configurations.

NEW QUESTION # 30

What are the full steps and proper order for removing the LPIO board from the PCIe tray?

- **A. Remove PCIe air shroud > Remove all AOC NIC cards > Remove metal bracket holding down LPIO board**
- B. Remove metal bracket holding down LPIO board > Remove PCIe air shroud > Remove internal fans
- C. Remove GPU > Remove metal bracket holding down LPIO board > Remove 3 or 4 AOC NIC cards
- D. Remove a few AOC NIC cards > Remove PCIe tray > Remove motherboard tray

Answer: A

Explanation:

Removing the LPIO (Low-Profile IO) board from the PCIe tray in the SYS-421GE-TNHR2-LCC involves:

* Remove PCIe air shroud: Clears access to components (standard in Supermicro designs).

* Remove all AOC NIC cards: Disconnects cards on the LPIO board for unobstructed removal.

* Remove metal bracket holding down LPIO board: Unscrews (typically 2 screws) the bracket securing the board. Option B follows Supermicro's logical service order (e.g., SYS-420GP-TNAR), ensuring safe access in DLC systems. A (GPU) is unrelated, C (tray

removals) is excessive, and D (fans) is irrelevant. B aligns with Supermicro's DLC modularity, making it correct. References: Supermicro PCIe tray service guides, DLC system IO removal protocols.

NEW QUESTION # 31

What safety feature prevents the motherboard tray from being removed too quickly and potentially dropped?

- **A. A safety latch**
- B. A safety pin
- C. A safety switch
- D. A safety cable

Answer: A

Explanation:

In Supermicro servers like the SYS-421GE-TNHR2-LCC, the motherboard tray is a critical component, often heavy with CPUs and DLC cold plates. A safety latch is the standard feature to prevent rapid removal and accidental drops, as seen in manuals (e.g., SYS-420GP-TNAR). Latches on both sides must be released deliberately, ensuring controlled extraction. A cable (A) might tether but not prevent speed, a switch (B) controls electronics, and a pin (D) is less common for trays. Supermicro's DLC systems prioritize safe handling, making C the correct safety mechanism.

NEW QUESTION # 32

There are 2 slots for the M.2 drive. If only one is installed, it is important to note which slot it is removed from so that it can be re-installed to the same location. True or False.

- A. True
- **B. False**

Answer: B

Explanation:

In Supermicro systems with 2 M.2 slots (e.g., SYS-421GE-TNHR2-LCC), the slots are typically interchangeable unless specified by BIOS or hardware configuration (rare in standard setups). Re-installing an

M.2 drive to the same slot isn't critical for functionality, as the system auto-detects it, per Supermicro manuals. False (B) aligns with DLC system flexibility, making it correct over A. References: Supermicro M.2 installation guides, DLC system storage configs.
