

SDS VCE Dumps & Latest SDS Test Cost

With the increasing marketization, the SDS study guide experience marketing has been praised by the consumer market. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the SDS study training materials, so we provide free pre-sale experience to help users to better understand our SDS Exam Questions. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of SDS latest questions to download.

Our company's top SDS exam braindumps are meant to deliver you the best knowledge on this subject. If you study with our SDS study guide, you will find that not only you can get the most professional and specialized skills to solve the problems in you dialy work, but also you can pass the exam without difficulty and achieve the certification. What is more, the prices of our SDS training engine are quite favorable.

Latest SDS Test Cost | Reliable SDS Exam Simulations

In your day-to-day life, things look like same all the time, but preparing for critical SDS practice exam is not one of those options. About the exam ahead of you this time, our SDS study braindumps will be your indispensable choices. Before you get the official one, you can estimate our quality by downloading the free demos. You will pay just a small amount of money on our SDS Exam Guide but harvest colossal success with potential bright future. And we have confidence that your future aims will come along with this successful exam as the beginning. So choosing SDS actual question is choosing success.

DASCA Senior Data Scientist Sample Questions (Q18-Q23):

NEW QUESTION # 18

ElementTree sub-library gives us direct access to:

- A. Insert tree of the XML
- **B. Parse tree of the XML**
- C. Delete tree of the XML
- D. None of the above
- E. Copy tree of the XML

Answer: B

Explanation:

In Python, the ElementTree module (part of the standard library xml.etree.ElementTree) provides a simple and efficient API for parsing and creating XML data.

The main feature of ElementTree is its ability to provide direct access to the parse tree of an XML document.

This allows developers to:

Parse XML into an in-memory tree structure.

Traverse, search, modify, and extract information from XML elements.

Write back changes into XML files.

Options B, C, and D (Delete, Copy, Insert tree) are not standard terminology in XML handling with ElementTree. While you can delete, insert, or copy elements, the module itself primarily gives parse tree access.

Thus, the correct answer is Option A (Parse tree of the XML).

NEW QUESTION # 19

Which of the following is a useful feature of functional programming?

- A. All of the above
- B. Higher-Order Functions (HOFs)
- C. Lazy Evaluation
- D. Immutable Data

Answer: A

Explanation:

Functional programming (FP) is a paradigm widely adopted in data science and big data tools (e.g., Spark with Scala/Python). Its useful features include:

Option A (Higher-Order Functions): Functions can take other functions as arguments or return them, enabling powerful abstractions like `map()`, `reduce()`, and `filter()`.

Option B (Immutable Data): Ensures reliability and thread-safety, crucial for distributed computing. Once created, data structures cannot be modified, preventing side effects.

Option C (Lazy Evaluation): Computations are delayed until results are needed, improving performance in large-scale data operations.

Since FP leverages all three features, the correct answer is Option D (All of the above).

NEW QUESTION # 20

Designing an algorithm to play chess is usually an example of which type of machine learning?

- A. Reinforcement learning
- B. Clustering
- C. Pattern density
- D. Supervised learning

Answer: A

Explanation:

Chess-playing algorithms are a classic application of Reinforcement Learning (RL) in machine learning.

In RL, an agent (chess program) interacts with an environment (chessboard/game state).

It learns optimal strategies (policies) by trial and error, guided by reward signals (e.g., winning the game, capturing pieces).

Famous examples include DeepMind's AlphaZero and earlier systems like IBM's Deep Blue, which incorporated reinforcement principles along with heuristics.

Option B (Pattern density): Not a recognized ML paradigm.

Option C (Supervised learning): While supervised ML can be used to predict moves from labeled games, chess strategy learning is best modeled as reinforcement learning.

Option D (Clustering): Not applicable; clustering is unsupervised grouping of data.

Thus, chess-playing algorithms are best categorized as Reinforcement Learning # Option A.

NEW QUESTION # 21

Spark should be used when:

- A. Both A and B
- B. Data is not massive
- C. Data is massive
- D. None of the above

Answer: C

Explanation:

Apache Spark is a distributed data processing engine optimized for big data scenarios. It is specifically designed to handle: Large-scale datasets spread across clusters.

Massive streaming or batch data pipelines.

Machine learning and graph processing at scale.

Option A: Correct - Spark excels when data is massive and distributed.

Option B: Incorrect - Spark is overkill for small data (Pandas, NumPy, or scikit-learn would be more efficient).

Option C: Incorrect - Spark is not optimized for small datasets.

Option D: Incorrect - since A is valid.

Thus, Spark should be used when data is massive # Option A.

NEW QUESTION # 22

Exploratory analytic algorithms help the Data Science team to better:

- A. Understand patterns in the data
- B. Both A and B
- C. All of the above
- D. Gain a high-level understanding of relationships
- E. Understand the data content

Answer: C

Explanation:

Exploratory analytics (often referred to as Exploratory Data Analysis - EDA) is a fundamental step in data science, enabling practitioners to discover initial insights, detect anomalies, and understand the structure of datasets before applying predictive or prescriptive modeling.

Option A (Understand the data content): Correct. EDA techniques (descriptive statistics, summary tables, profiling) reveal missing values, data types, and distributions.

Option B (Gain a high-level understanding of relationships): Correct. Correlation analysis, scatter plots, and cross-tabulations help identify dependencies between variables.

Option C (Understand patterns in the data): Correct. Visualization and clustering methods help discover hidden structures, seasonalities, and outliers.

Since exploratory algorithms contribute to all of these objectives, the correct answer is Option E (All of the above).
