PEGACPLSA23V1 Free Exam, PEGACPLSA23V1 Exam Vce Format

The PEGACPLSA23V1 exam is one of the most valuable certification exams. The Certified Pega Lead System Architecture (LSA) Exam 23 (PEGACPLSA23V1) certification exam opens a door for beginners or experienced PrepAwayPDF professionals to enhance in-demand skills and gain knowledge. PEGACPLSA23V1 exam credential is proof of candidates' expertise and knowledge. After getting success in the Certified Pega Lead System Architecture (LSA) Exam 23 (PEGACPLSA23V1) certification exam, candidates can put their careers on the fast route and achieve their goals in a short period of time.

Pegasystems Certified Pega Lead System Architecture (LSA) Exam 23 Sample Questions (Q23-Q28):

NEW QUESTION # 23
Which two of the following statements are true with respect to queue processor? (Choose Two)

- A. The partition count for a queue processor cannot be modified.
- B. The node that is associated with the queue processor can be the Stream node type.
- C. The node that is associated to queue processor must be a Stream node type.
- D. The partition count for a queue processor can be modified.

Answer: B,D

NEW QUESTION # 24
Which of the following statements about Case Specialization are most accurate? (Choose Two)

- A. A Specialized case type does not support automatic instantiation for its covered items
- B. The starting process of a specialized case type is a circumstanced version of the base case starting flow
- C. Any Property visible to a case can be used to specialize the case
- D. Case Specialization enables multiple case structures for the same case type
- E. A Specialized case type can cover another specialized case type

Answer: D,E

NEW QUESTION # 25
You want a group of users to view certain properties in a case without being able to open the case.
Which one of the following solutions do you implement?

- A. Role-based access control Read action

- B. Attribute-based access control Property Read action
- C. Role-based access control privilege
- D. Attribute-based access control Discover action

Answer: D

NEW QUESTION # 26

The initial behavior of the case type is always the same. But the case type must ultimately change based on the type of data instance that it is associated with. The data instance's type is not known when the case is created.
How do you implement this scenario?

- A. For each data instance type, create a subflow. Use a Decision shape to select the appropriate subflow shape.
- B. Circumstance every rule in the case life-cycle beyond the point that the data instance's type is determined.
- C. Use pattern inheritance with the case type class for each data instance type. Define type-specific behavior in each specialized class.
- D. For each data instance type create a subcase. Use a Decision shape to select the appropriate create case flow shape.

Answer: C

NEW QUESTION # 27

Which one of the following approaches supports a responsive user experience in devices with different resolutions?
