

Seit Neuem aktualisierte Analytics-Arch-201 Examfragen für Salesforce Analytics-Arch-201 Prüfung

Wenn Sie ein Pendler sind, wenn Sie die Salesforce Analytics-Arch-201 Prüfung so schnell wie möglich bestehen möchten, dass ist DeutschPrüfung Ihre beste Wahl. Unser DeutschPrüfung bietet Ihnen die Testfragen und Antworten von Salesforce Analytics-Arch-201, die von den IT-Experten durch Experimente und Praxis erhalten werden und über IT-Zertifizierungserfahrungen über 10 Jahre verfügt. Mit DeutschPrüfung können Sie nicht nur Zeit sparen, sondern auch die Salesforce Analytics-Arch-201 Zertifizierungsprüfung leicht und zügig bestehen.

Die Salesforce Analytics-Arch-201 Prüfung macht man wirklich besorgt. Vielleicht vertragen Sie nicht mehr die große Menge von Prüfungsunterlagen, dann lassen Sie Salesforce Analytics-Arch-201 Prüfungssoftware von DeutschPrüfung Ihnen helfen, die Belastungen zu erleichtern! Unsere professionelle IT-Profis haben die anspruchsvolle Salesforce Analytics-Arch-201 Prüfungssoftware entwickelt dadurch, dass die komplizierten Test-Bank geordnet und die Schwerpunkte der Prüfungen in den letzten Jahren analysiert haben. Trotzdem aktualisieren wir die Salesforce Analytics-Arch-201 Prüfungsunterlagen immer weiter. Innerhalb einem Jahr nach Ihrem Kauf geben wir Ihnen sofort Bescheid, wenn die Salesforce Analytics-Arch-201 aktualisiert hat.

Analytics-Arch-201 Prüfungsunterlagen & Analytics-Arch-201 Vorbereitungsfragen

Wenn Sie einen Traum haben, dann sollen Sie Ihren Traum verteidigen. Gorki hat einmal gesagt, dass der Glaube ist ein großes Gefühl und eine kreative Kraft ist. MeinTraum ist es, ein Top-IT-Experte zu werden. Ich denke, dass es für mich nirgends in Sicht ist. Aber Erfolg können Sie per eine Abkürzung gelingen, solange Sie die richtige Wahl treffen. Ich benutze die DeutschPrüfung Salesforce Analytics-Arch-201 Prüfung Fragenkataloge, und habe die Salesforce Analytics-Arch-201 Zertifizierungsprüfung bestanden. Die Fragenkataloge zur Salesforce Analytics-Arch-201 Prüfung von DeutschPrüfung sind die besten Lernhilfe. Wenn Sie wie ich einen IT-Traum haben. Dann kaufen Sie Prüfungsfragen und Antworten von DeutschPrüfung. DeutschPrüfung wird Ihnen helfen, Ihren Traum zu verwirklichen.

Salesforce Analytics-Arch-201 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Thema 2	• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
Thema 3	• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.

Salesforce Certified Tableau Architect Analytics-Arch-201 Prüfungsfragen mit Lösungen (Q123-Q128):

123. Frage

A company is transitioning to Tableau Cloud but still has critical data in on-premises databases that need to be accessed in real-time. What is the best solution for integrating these data sources with Tableau Cloud?

- A. Migrate all on-premises data to the cloud before using Tableau Cloud
- **B. Implement Tableau Bridge to establish a live connection to on-premises databases**
- C. Rely solely on Tableau Cloud's native capabilities for on-premises data integration
- D. Utilize Tableau Builder for real-time data integration

Antwort: B

Begründung:

Implement Tableau Bridge to establish a live connection to on-premises data-bases Tableau Bridge is specifically designed to allow real-time access to on-premises data from Tableau Cloud, making it the ideal solution for this scenario. Option A is incorrect because Tableau Prep Builder is used for data preparation, not for establishing live connections to on-premises data sources. Option C is incorrect as migrating all data to the cloud may not be feasible or desirable for all companies. Option D is incorrect because Tableau Cloud's native capabilities do not include direct live data connections to on-premises databases without Tableau Bridge.

124. Frage

A healthcare organization is planning to deploy Tableau for data analysis across multiple departments with varying usage patterns. Which licensing strategy would be most effective for this organization?

- A. Acquire individual licenses for each user, regardless of their usage frequency or data access needs
- B. Use only core-based licensing for all users to simplify the licensing process
- **C. Adopt a mixed licensing strategy, combining core-based and user-based licenses according to departmental usage patterns**
- D. Purchase a single enterprise-wide license and distribute access uniformly across all departments

Antwort: C

Begründung:

Adopt a mixed licensing strategy, combining core-based and user-based licenses according to departmental usage patterns This approach allows for flexibility and cost-effectiveness by tailoring the licensing model to the specific needs of different departments, considering their us-age frequency and data access requirements. Option A is incorrect because it may not be cost-effective and does not consider the varying needs of different departments. Option B is incorrect as it does not account for the diverse usage patterns and could lead to unnecessary expenses for infrequent users. Option D is incorrect because core-based licensing alone may not be the most efficient choice for all user types, particularly those with low usage.

125. Frage

A large enterprise with a global presence is looking to enhance its Tableau Server deployment to support advanced analytics and machine learning capabilities. Which Tableau Server Add-On should be recommended to meet this requirement?

- A. Tableau Server Management Add-On to leverage advanced analytics and machine learning capabilities
- B. Tableau Bridge to provide better connectivity with external data sources
- C. Tableau Data Management Add-On to enhance data preparation and cataloging
- D. Tableau Catalog for improved data management and governance

Antwort: A

Begründung:

Tableau Server Management Add-On to leverage advanced analytics and machine learning capabilities This add-on provides enhanced capabilities for managing the Tableau Server environment, including features that support advanced analytics and machine learning, which are essential for a large enterprise looking to leverage these technologies. Option A is incorrect because Tableau Bridge primarily focuses on live data connection and not on advanced analytics or machine learning. Option B is incorrect as Tableau Catalog is more about data visibility and lineage, not directly related to advanced analytics and machine learning. Option C is incorrect because while it improves data preparation and cataloging, it does not directly address advanced analytics and machine learning requirements.

126. Frage

Based on observability data showing consistent high load on Tableau Server's primary node, which architectural revision should be considered to improve performance?

- A. Consolidating all server processes on the primary node to simplify management
- B. Switching to a different operating system for the Tableau Server
- C. Increasing the bandwidth of the network on which Tableau Server is hosted
- D. Adding worker nodes to distribute the load more evenly across the server architecture

Antwort: D

Begründung:

Adding worker nodes to distribute the load more evenly across the server architecture When observability data indicates a consistent high load on Tableau Server's primary node, adding worker nodes is a strategic architectural revision to consider. This approach helps distribute the workload more evenly across the server, potentially improving performance and reducing the strain on the primary node. Option A is incorrect because switching the operating system does not directly address the issue of load distribution across the server architecture. Option C is incorrect as increasing network bandwidth, while beneficial for data transfer, does not resolve high load issues on the server's primary node. Option D is incorrect because consolidating all processes on the primary node would likely exacerbate the high load issue rather than alleviate it.

127. Frage

What is an essential step in implementing extract encryption in Tableau Server to enhance data security?

- A. Relying on database-level encryption alone to secure all data used in Tableau extracts
- B. Enabling extract encryption at the server level to ensure all extracts are encrypted, regardless of their content
- C. Encrypting only those extracts that contain sensitive information, while leaving others un-encrypted for performance reasons
- D. Manually encrypting each extract using third-party software before uploading it to Tableau Server

Antwort: B

Begründung:

Enabling extract encryption at the server level to ensure all extracts are encrypted, regardless of their content Implementing extract encryption in Tableau Server should involve enabling encryption at the server level. This ensures that all extracts stored on the server are encrypted, providing a consistent layer of security across all data, regardless of its sensitivity. This approach helps protect against unauthorized access to extract data stored on the server. Option A is incorrect because selectively encrypting extracts can lead to inconsistencies in security and potential vulnerabilities. Option C is incorrect as database-level encryption does not protect extracts once they are exported from the database. Option D is incorrect because manual encryption of each extract is inefficient and not

scalable, and Tableau Server provides its own encryption mechanism for extracts.

128. Frage
