

ServiceNow CIS-Discovery Valid Dumps Demo, CIS-Discovery Exam Actual Questions

BTW, DOWNLOAD part of TestKingFree CIS-Discovery dumps from Cloud Storage: https://drive.google.com/open?id=1rZTR1ydCQbIFqEjsnyYf8K6aS_N0RFv

To pass ServiceNow CIS-Discovery certification exam seems to be a very difficult task. Having registered CIS-Discovery test, are you worrying about how to prepare for the exam? If so, please see the following content, I now tell you a shortcut through the CIS-Discovery Exam. The certification training dumps that can let you pass the test first time have appeared and it is TestKingFree ServiceNow CIS-Discovery exam dumps. If you would like to sail through the test, come on and try it.

The CIS-Discovery certification exam covers a wide range of topics related to ServiceNow Discovery, such as Discovery concepts and architecture, application discovery, device discovery, data management, and troubleshooting. CIS-Discovery exam is conducted online and comprises of 60 multiple-choice questions that need to be answered within 90 minutes. The passing score for the exam is 70%, and the exam fee is \$150.

The CIS-Discovery certification exam covers a range of topics, including ServiceNow Discovery architecture, setup, and configuration; data sources and credentials management; classification and identification of IT assets; troubleshooting and problem resolution; and integration of the Discovery application with other ServiceNow modules. Passing the exam demonstrates an individual's ability to effectively deploy and manage ServiceNow Discovery, which is an essential tool for ensuring IT asset management, compliance, and security within an organization. Overall, the CIS-Discovery Certification is a valuable asset for IT professionals who are looking to advance their careers and improve their proficiency in ServiceNow's Discovery application.

ServiceNow CIS-Discovery Exam Actual Questions & Valid CIS-Discovery Test Duration

Our CIS-Discovery exam questions can meet your needs to the maximum extent, and our CIS-Discovery learning materials are designed to the greatest extent from the customer's point of view. So you don't have to worry about the operational complexity. As soon as you enter the learning interface of our system and start practicing our CIS-Discovery Learning Materials on our Windows software, you will find small buttons on the interface. It is very easy and convenient to use and find.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q31-Q36):

NEW QUESTION # 31

In a discovery pattern, which types are available with CI Attributes in the Pattern Designer? (Choose two.)

- A. Related CI types
- B. Global CI types
- C. Main pattern CI type
- D. All CI types

Answer: A,C

Explanation:

In a discovery pattern, CI Attributes are the fields that store the information about the configuration items (CIs) that are discovered by the pattern. The Pattern Designer is a graphical interface that allows users to create and edit patterns using drag-and-drop operations. In the Pattern Designer, there are two types of CI Attributes that are available: Main pattern CI type and Related CI types. The Main pattern CI type is the CI type that the pattern is designed to discover, such as Windows Server, Linux Server, or Database. The Related CI types are the CI types that are related to the main CI type, such as IP Address, Network Adapter, or Software Installation. Users can select the CI Attributes from these types to populate the CMDB tables with the data collected by the pattern.

NEW QUESTION # 32

Which of the below choices are the most probable results of the following image? (Choose three.)

The screenshot shows the ServiceNow Pattern Designer interface for a WMI Query. The configuration is as follows:

- Operation:** WMI Query
- Precondition:** ☐
- 1. Namespace:** root\cimv2
- 2. Select Table Name And Fields:**
 - Tables:** Win32_Process (selected)
 - Fields:** PageFaults (selected)
- 3. Add Condition Clause:** Name like 'mongoose%'
- * 4. Get Full Statement:** "SELECT MaximumWorkingSetSize,PageFaults FROM Win32_Process WHERE " + "Name like 'mongoose%'"
- * 5. Target Table:** \$more_process_info
- Use cache:** ☐
- Terminate if not found:** ☒

- A. A tabular variable named 'WMI Query'.
- B. A scalar variable named 'PeakVirtualSize'.
- C. A tabular variable named 'Win32_Process'.
- D. A scalar variable named 'MaximumWorkingSetSize'
- E. A tabular variable named 'more_process_info'.
- F. A scalar variable named 'PageFaults'.

Answer: A,B,D

Explanation:

The image shows a part of a horizontal pattern in Pattern Designer that uses the WMI Query operation to retrieve information about the processes running on a Windows server. The operation takes a WQL query as an input parameter and returns a tabular variable that contains the results of the query. The tabular variable is named 'WMI Query' by default, but it can be renamed by the user. The WQL query in the image selects four attributes from the Win32_Process class: Name, MaximumWorkingSetSize, PageFaults, and PeakVirtualSize.

These attributes are stored as scalar variables in the tabular variable, and they can be accessed by using the dot notation, such as WMI Query.Name or WMI Query.MaximumWorkingSetSize. Therefore, the most probable results of the image are a tabular variable named 'WMI Query' and two scalar variables named 'MaximumWorkingSetSize' and 'PeakVirtualSize'.

NEW QUESTION # 33

Benefits of using Discovery.

Response:

- A. Accurate monitoring of Applications
- B. Extend discovery throughout IT
- C. Enable service impact analysis
- D. Realize fast time to value

Answer: B,C,D

NEW QUESTION # 34

Which of the below choices are horizontal pattern types? (Choose two.)

- A. Application
- B. Software
- C. Infrastructure
- D. Hardware

Answer: A,C

Explanation:

Horizontal pattern types are used to discover the configuration items (CIs) that belong to a specific category or class, such as infrastructure or application. They define the operations that Discovery performs to identify and classify the CIs, and the attributes that Discovery populates for each CI. Horizontal patterns can be applied to any operating system or platform that supports the required protocols and commands¹².

NEW QUESTION # 35

For the Parse Variable pattern operation, what is required to have two different parsing methods to populate variables?

- A. Two different Debug Mode sessions.
- B. Two different Define Parsing selections on the same step.
- C. A tabular and a scalar variable.
- D. Two different steps.

Answer: D

Explanation:

The Parse Variable pattern operation allows you to extract information from the output of a previous operation and save it in a variable. You can choose from different parsing methods, such as JSON File, XML File, Regular Expression, or Custom Script. To have two different parsing methods to populate variables, you need to use two different steps, each with a different Define Parsing selection. For example, you can use one step to parse a JSON file and another step to parse an XML file. You cannot use two different parsing methods on the same step, as the Define Parsing selection is unique for each step.

:

Parse command output: This article explains how to use the Parse command output operation and the different parsing methods available.

Pattern Designer: Parse Variable - JSON File gives error: This article provides a troubleshooting tip for using the JSON File parsing method.

Examples of EVAL scripts used in Discovery patterns: This article provides some examples of custom scripts that can be used for the Custom Script parsing method.

NEW QUESTION # 36

.....

Far more effective than online courses free or other available exam materials from the other websites, our CIS-Discovery exam questions are the best choice for your time and money. As the content of our CIS-Discovery study materials has been prepared by the most professional and specialized experts. I can say that no one can know the CIS-Discovery learning quiz better than them and they can teach you how to deal with all of the exam questions and answers skillfully.
