

Sie können so einfach wie möglich - Associate-Data-Practitioner bestehen!

Sind Sie einer von den vielen? Machen Sie sich noch Sorgen wegen den zahlreichen Kurse und Materialien zur Google Associate-Data-Practitioner Zertifizierungsprüfung? PrüfungFrage ist Ihnen eine weise Wahl, denn wir Ihnen die umfassendsten Prüfungsmaterialien bieten, die Fragen und Antworten und ausführliche Erklärungen beinhalten. Alle diesen werden Ihnen helfen, die Fachkenntnisse zu beherrschen. Wir sind selbstsicher, dass Sie die Google Associate-Data-Practitioner Zertifizierungsprüfung bestehen. Das ist unser Versprechen an den Kunden.

Google Associate-Data-Practitioner Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Data Analysis and Presentation: This domain assesses the competencies of Data Analysts in identifying data trends, patterns, and insights using BigQuery and Jupyter notebooks. Candidates will define and execute SQL queries to generate reports and analyze data for business questions. • Data Pipeline Orchestration: This section targets Data Analysts and focuses on designing and implementing simple data pipelines. Candidates will select appropriate data transformation tools based on business needs and evaluate use cases for ELT versus ETL.
Thema 2	• Data Preparation and Ingestion: This section of the exam measures the skills of Google Cloud Engineers and covers the preparation and processing of data. Candidates will differentiate between various data manipulation methodologies such as ETL, ELT, and ETLT. They will choose appropriate data transfer tools, assess data quality, and conduct data cleaning using tools like Cloud Data Fusion and BigQuery. A key skill measured is effectively assessing data quality before ingestion.
Thema 3	• Data Management: This domain measures the skills of Google Database Administrators in configuring access control and governance. Candidates will establish principles of least privilege access using Identity and Access Management (IAM) and compare methods of access control for Cloud Storage. They will also configure lifecycle management rules to manage data retention effectively. A critical skill measured is ensuring proper access control to sensitive data within Google Cloud services

PrüfungFrage verspricht den Kunden, dass Sie die Google Associate-Data-Practitioner IT-Zertifizierungsprüfung 100% bestehen können. Die Qualität von PrüfungFrage wird nach den IT-Experten überprüft. Das wichtigste Merkmal unserer Produkte ist ihre Relevanz. Der Schulungskurs dauert nur 20 Stunden. Und Sie werden die Google Associate-Data-Practitioner Zertifizierungsprüfung dann mühlos bestehen. Wenn Sie PrüfungFrage wählen, werden Sie dann sicher nicht bereuen. Denn es wird Ihnen Erfolg bringen.

Google Cloud Associate Data Practitioner Associate-Data-Practitioner Prüfungsfragen mit Lösungen (Q43-Q48):

43. Frage

You manage a web application that stores data in a Cloud SQL database. You need to improve the read performance of the application by offloading read traffic from the primary database instance. You want to implement a solution that minimizes effort and cost. What should you do?

- A. Migrate the database to a larger Cloud SQL instance.
- B. Use Cloud CDN to cache frequently accessed data.
- C. Store frequently accessed data in a Memorystore instance.
- **D. Enable automatic backups, and create a read replica of the Cloud SQL instance.**

Antwort: D

Begründung:

Enabling automatic backups and creating a read replica of the Cloud SQL instance is the best solution to improve read performance. Read replicas allow you to offload read traffic from the primary database instance, reducing its load and improving overall performance. This approach is cost-effective and easy to implement within Cloud SQL. It ensures that the primary instance focuses on write operations while replicas handle read queries, providing a seamless performance boost with minimal effort.

44. Frage

You used BigQuery ML to build a customer purchase propensity model six months ago. You want to compare the current serving data with the historical serving data to determine whether you need to retrain the model. What should you do?

- **A. Evaluate data drift.**
- B. Evaluate the data skewness.
- C. Compare the two different models.
- D. Compare the confusion matrix.

Antwort: A

Begründung:

Evaluating data drift involves analyzing changes in the distribution of the current serving data compared to the historical data used to train the model. If significant drift is detected, it indicates that the data patterns have changed over time, which can impact the model's performance. This analysis helps determine whether retraining the model is necessary to ensure its predictions remain accurate and relevant. Data drift evaluation is a standard approach for monitoring machine learning models over time.

45. Frage

Your company uses Looker as its primary business intelligence platform. You want to use LookML to visualize the profit margin for each of your company's products in your Looker Explores and dashboards. You need to implement a solution quickly and efficiently. What should you do?

- A. Create a derived table that pre-calculates the profit margin for each product, and include it in the Looker model.
- **B. Define a new measure that calculates the profit margin by using the existing revenue and cost fields.**
- C. Create a new dimension that categorizes products based on their profit margin ranges (e.g., high, medium, low).

- D. Apply a filter to only show products with a positive profit margin.

Antwort: B

Begründung:

Defining a new measure in LookML to calculate the profit margin using the existing revenue and cost fields is the most efficient and straightforward solution. This approach allows you to dynamically compute the profit margin directly within your Looker Explores and dashboards without needing to pre-calculate or create additional tables. The measure can be defined using LookML syntax, such as:

```
measure: profit_margin {
  type: number
  sql: (revenue - cost) / revenue ;;
  value_format: "0.0%"
}
```

This method is quick to implement and integrates seamlessly into your existing Looker model, enabling accurate visualization of profit margins across your products.

46. Frage

You are storing data in Cloud Storage for a machine learning project. The data is frequently accessed during the model training phase, minimally accessed after 30 days, and unlikely to be accessed after 90 days. You need to choose the appropriate storage class for the different stages of the project to minimize cost. What should you do?

- A. Store the data in Standard storage during the model training phase. Transition the data to Durable Reduced Availability (DRA) storage 30 days after model deployment, and to Coldline storage 90 days after model deployment.
- B. Store the data in Nearline storage during the model training phase. Transition the data to Coldline storage 30 days after model deployment, and to Archive storage 90 days after model deployment.
- **C. Store the data in Standard storage during the model training phase. Transition the data to Nearline storage 30 days after model deployment, and to Coldline storage 90 days after model deployment.**
- D. Store the data in Nearline storage during the model training phase. Transition the data to Archive storage 30 days after model deployment, and to Coldline storage 90 days after model deployment.

Antwort: C

Begründung:

Comprehensive and Detailed In-Depth Explanation:

Cost minimization requires matching storage classes to access patterns using lifecycle rules. Let's assess:

* Option A: Nearline during training (frequent access) incurs high retrieval costs and latency, unsuitable for ML workloads. Coldline after 30 days and Archive after 90 days are reasonable but misaligned initially.

* Option B: Standard storage (no retrieval fees, low latency) is ideal for frequent access during training.

Transitioning to Nearline (30-day minimum, low access) after 30 days and Coldline (90-day minimum, rare access) after 90 days matches the pattern and minimizes costs effectively.

* Option C: Nearline during training is costly for frequent access, and Archive to Coldline is illogical (Archive is cheaper than Coldline).

47. Frage

You manage a BigQuery table that is used for critical end-of-month reports. The table is updated weekly with new sales data. You want to prevent data loss and reporting issues if the table is accidentally deleted. What should you do?

- A. Create a clone of the table. On deletion, re-create the deleted table by copying the content of the clone.
- **B. Schedule the creation of a new snapshot of the table once a week. On deletion, re-create the deleted table using the snapshot and time travel data.**
- C. Create a view of the table. On deletion, re-create the deleted table from the view and time travel data.
- D. Configure the time travel duration on the table to be exactly seven days. On deletion, re-create the deleted table solely from the time travel data.

Antwort: B

Begründung:

Scheduling the creation of a snapshot of the table weekly ensures that you have a point-in-time backup of the table. In case of

accidental deletion, you can re-create the table from the snapshot. Additionally, BigQuery's time travel feature allows you to recover data from up to seven days prior to deletion. Combining snapshots with time travel provides a robust solution for preventing data loss and ensuring reporting continuity for critical tables. This approach minimizes risks while offering flexibility for recovery.

48. Frage

.....

Wir suchen die Methode des Erfolgs, aber nicht die Ausrede des Misserfolgs. Um zu garantieren, dass die Prüfungsunterlagen der Google Associate-Data-Practitioner für Sie am verlässlichsten ist, haben die IT-Profis von PrüfungFrage seit Jahren die Prüfungsaufgaben der Google Associate-Data-Practitioner sorgfältig analysiert und die ausführliche Erklärungen geordnet. Die Zertifizierung der Google Associate-Data-Practitioner ist der überzeugende Beweis für Ihre IT-Fähigkeit und wird in Ihrem Berufsleben eine große Rolle spielen.
