## Cloud Security Alliance Certificate of Cloud Security Knowledge (v4.0) Exam Sample Questions (Q242-Q247):

### NEW QUESTION # 242

What is the purpose of the "Principle of Least Privilege" in Identity and Access Management (IAM)?

- A. To implement multiple layers of security checks for access control
- B. To streamline access across diverse systems or organizations
- C. To minimize the risk of unauthorized access by assigning access rights based on role requirements
- D. To continuously monitor user activity for suspicious behavior

**Answer: C**

Explanation:

The Principle of Least Privilege (PoLP) is a foundational concept in IAM, highlighted in the CSA Security Guidance v4.0 - Domain 12: Identity, Entitlement, and Access Management. It ensures users, systems, and processes are granted only the permissions necessary to perform their tasks - and nothing more.

"Least privilege refers to granting the minimum level of access - or permissions - needed for users or services to perform their required functions, thereby reducing the attack surface and limiting potential damage from misuse or compromise."

- CSA Security Guidance v4.0, Domain 12

This principle:

Reduces the likelihood of accidental or malicious misuse

Limits damage in the case of credential theft

Supports compliance with least privilege mandates in frameworks like ISO/IEC 27001 and NIST

B is related to federation, not least privilege

C involves monitoring and analytics, not permission assignment

D is about defense in depth, which is broader than PoLP

Reference:

CSA Security Guidance v4.0 - Domain 12: IAM

CCM v3.0.1 - IAM-01, IAM-05 (Covers least privilege and role-based access control)
