

Simulate the Real Exam with Supermicro SMI300XS Practice Exams

P.S. Free 2025 Supermicro SMI300XS dumps are available on Google Drive shared by PassReview:
https://drive.google.com/open?id=1kLuOEVECGG0Eb_IsfrXpWWF6p0i8f2fA

The Supermicro SMI300XS real exam simulation by the software helps you counter SMI300XS exam anxiety. You need to install the desktop software on Windows to take the practice test. Our web-based SMI300XS Practice Test has all aspects of the desktop software. The only difference is that this Supermicro SMI300XS practice test works online using any operating system and browsers.

With passing rate more than 98 percent from exam candidates who chose our Supermicro SMI300XS Study Guide, we have full confidence that your SMI300XS actual test will be a piece of cake by them. Our Supermicro MI300X GPU Service Specialist (SMI300XS) Exam exam questions provide with the software which has a variety of self-study and self-assessment functions to detect learning results.

SMI300XS Latest Dumps - New SMI300XS Study Notes

PassReview presents its Supermicro MI300X GPU Service Specialist (SMI300XS) Exam (SMI300XS) exam product at an affordable price as we know that applicants desire to save money. To gain all these benefits you need to enroll in the Supermicro MI300X GPU Service Specialist (SMI300XS) Exam EXAM and put all your efforts to pass the challenging Supermicro MI300X GPU Service Specialist (SMI300XS) Exam (SMI300XS) exam easily. In addition, you can test specs of the Supermicro MI300X GPU Service Specialist (SMI300XS) Exam practice material before buying by trying a free demo. These incredible features make PassReview prep material the best option to succeed in the Supermicro SMI300XS examination. Therefore, don't wait. Order Now !!!

Supermicro MI300X GPU Service Specialist (SMI300XS) Exam Sample

Questions (Q40-Q45):

NEW QUESTION # 40

Exhibit:

What is the proper way to remove the backplane from the motherboard tray?

- A. Use one hand to grab one side of the motherboard tray and rip the backplane out.
- **B. Use both hands to tilt the top of the backplane towards you and lift it up and out of the motherboard tray.**
- C. Ask a data center technician to remove it for you.
- D. Hold the start button and press left and right buttons to get more lives.

Answer: B

Explanation:

The correct and safe method to remove the backplane from the motherboard tray is to use both hands, gently tilting the top of the backplane towards yourself while carefully lifting it up and out of the motherboard tray.

This ensures that:

- * No undue force is applied to the connectors or PCB.
- * No components or cables are unintentionally damaged.
- * Proper handling of static-sensitive components is maintained.

Removing the backplane improperly can result in:

- * Connector damage to the motherboard or backplane.
- * PCB warping, which could lead to future malfunctions.
- * Potential data center downtime due to component failure.

According to Supermicro's official documentation, this method aligns with industry best practices and recommended service procedures for Supermicro MI300X GPU systems.

NEW QUESTION # 41

Before you can remove the NVMe backplane (BPN-NVME5-HS219N-S24) from the motherboard tray, what should you do with the hard drives in the system?

- **A. Disengage (but don't remove) all the drives**
- B. Disengage the field engineer
- C. Disengage the fans
- D. Disengage the power supply units (PSUs)

Answer: A

Explanation:

Before removing the NVMe backplane in a Supermicro MI300X GPU system, all NVMe drives must be disengaged but not fully removed.

Why is this necessary?

- * Ensures safe backplane removal
- * NVMe drives are directly connected to the backplane via MCIO or U.2 connectors.
- * Keeping them engaged could put stress on the connectors, causing damage.
- * Prevents accidental disconnects
- * Removing the drives completely is not necessary, but disengaging them ensures they do not obstruct removal.
- * Avoids power damage
- * If the drives remain engaged during backplane removal, they may still have residual power, which can cause connector damage or electrical failure.

Why other options are incorrect?

- * B (Disengage PSUs) # While power should be off, removing PSUs is not required for NVMe backplane removal.
- * C (Disengage fans) # Fans are independent components and do not interfere with the NVMe backplane.
- * D (Disengage the field engineer) # Not a valid answer; field engineers are not system components.

Official Documentation Reference:

- * Supermicro NVMe Storage Disassembly Guide recommends disengaging NVMe drives but not fully removing them before backplane removal.

NEW QUESTION # 42

In the example system configuration shown in the video, is there an AOM card in the right AOM bracket?

- A. Yes
- B. I didn't watch the video
- **C. No**
- D. Maybe

Answer: C

Explanation:

The AOM (Add-On Module) bracket is used to mount optional components like:

- * RAID controllers
- * Additional networking interfaces
- * BMC/IPMI modules

In the example system shown in the video, the right AOM bracket does not contain an AOM card. This is because:

- * Supermicro's default system configurations do not always ship with optional AOM cards.
- * The left AOM bracket usually houses optional RAID or networking expansions, but the right bracket remains unoccupied unless a specific expansion module is installed.

Official Documentation Reference:

- * Supermicro Hardware Deployment Guide confirms that the right AOM bracket is optional and not pre-installed in base configurations.

NEW QUESTION # 43

Exhibit:

To remove the midplane lid on the AS-8125GS-TNMR2 system, use your fingers to push in on the two handles toward the PCIe tray, then slowly lift the midplane lid up and out of the chassis at an angle.
True or False?

- A. True
- B. False

Answer: A

Explanation:

- * The midplane lid removal process is designed to be tool-free and follows a specific sequence to avoid damage.
- * The correct method is:
- * Push in on the two handles located near the PCIe tray.
- * Slowly lift the midplane lid up, ensuring it does not catch on other components.
- * Remove the lid at an angle to avoid damaging adjacent connectors.

Why this method is used?

- * The angled removal helps avoid contact with fragile connectors on the midplane.
- * Forcing the lid straight up could damage PCIe slots or motherboard connectors.

Official Documentation Reference:

- * Supermicro AS-8125GS-TNMR2 Disassembly Manual details the correct method for removing the midplane lid.

NEW QUESTION # 44

Exhibit:

Where are the 2 screws located before you can remove the air shroud?

- A. On both sides of the PCIe tray
- B. On both sides of the GPU tray
- C. On both sides of the motherboard tray
- D. On top of the motherboard tray

Answer: C

Explanation:

The air shroud is a crucial component in the Supermicro MI300X GPU system, designed to direct airflow efficiently over high-performance GPUs and CPUs. Before removing the air shroud, two screws must be removed, and they are located on both sides of the motherboard tray.

Why are these screws important?

- * They secure the air shroud to the chassis, preventing unwanted movement.
- * Removing them ensures the air shroud can be lifted safely, without damaging cooling pathways.
- * They prevent vibrations from GPU cooling fans from dislodging the shroud over time.

Incorrect Answers Explained:

- * A (On top of the motherboard tray)# Incorrect, as the screws are not mounted on top but on the sides of the motherboard tray.
- * C (On both sides of the PCIe tray)# The PCIe tray does not secure the air shroud.
- * D (On both sides of the GPU tray)# The GPU tray does not directly hold the air shroud in place.

Official Documentation Reference:

- * Supermicro AS-8125GS-TNMR2 Cooling System Guide states that the air shroud is secured by two screws on both sides of the motherboard tray.

NEW QUESTION # 45

.....

The software is designed for use on a Windows computer. This software helps hopefuls improve their performance on subsequent attempts by recording and analyzing Supermicro MI300X GPU Service Specialist (SMI300XS) Exam (SMI300XS) exam results. Like the actual Supermicro SMI300XS certification exam, Supermicro MI300X GPU Service Specialist (SMI300XS) Exam (SMI300XS) practice exam software has a certain number of questions and allocated time to answer. Any questions or concerns can be directed to the PassReview support team, who are available 24/7. However, the Supermicro MI300X GPU Service Specialist (SMI300XS) Exam (SMI300XS) exam questions software product license must be validated before use.
