#### NEW QUESTION # 47

Only the API calls made using your organization's OAuth Clients are considered for billing.

- A. True
- B. False

**Answer: B**

Explanation:

Genesys Cloud CX includes in its billing calculations all API calls made using your organization's OAuth clients, as well as those from custom or third-party applications, integrations, and solutions, including AppFoundry apps. However, API requests made by Genesys Cloud's own browser, web, and mobile applications, as well as certain embedded clients like Genesys Cloud for Chrome, Genesys Cloud for Firefox, Genesys Cloud for Salesforce, and Genesys Cloud for Zendesk, are not included in the API usage data for billing purposes. This distinction ensures that only external API usage contributes to billing calculations.

- C. A 'query endpoint is best suited for bulk export of data.

A query endpoint provides real-time access to the most up-to-date data and returns the requested information immediately. This is ideal for scenarios where the user requires immediate responses.

A jobs endpoint, on the other hand, is designed for scenarios where bulk export of data is required. It processes requests asynchronously and provides a response when the export is complete, making it suitable for larger data sets that don't require an immediate response.
