Pass Guaranteed Sitecore-XM-Cloud-Developer - Sitecore XM Cloud Developer Certification Exam Authoritative Reliable Dumps Ppt

The staffs of Sitecore-XM-Cloud-Developer training materials are all professionally trained. If you have encountered some problems in using our products, you can always seek our help. Our staff will guide you professionally. If you are experiencing a technical problem on the system, the staff at Sitecore-XM-Cloud-Developer practice guide will also perform one-on-one services for you. We want to eliminate all unnecessary problems for you, and you can learn our Sitecore-XM-Cloud-Developer Exam Questions without any problems. You may have enjoyed many services, but the professionalism of Sitecore-XM-Cloud-Developer simulating exam will conquer you.

Sitecore Sitecore-XM-Cloud-Developer Exam Syllabus Topics:

Topic	Details
Topic 1	• Deployment of XM Cloud Projects: In this topic different methods to deploy XM Cloud projects including continuous integration and continuous delivery (CI • CD), manual deployment, and using the Sitecore XM Cloud Reference Manager are discussed.

Topic 2	• XM Cloud Pages: The XM Cloud Pages discusses the user experience of an application or website. In this topic, you encounter questions about individual building blocks. These blocks define the layout and content of each page.
Topic 3	• XM Cloud Architecture and Developer Workflow: This topic delves into the basics of XM Cloud, its key components, architecture, and the development workflow to build and deploy applications on XM Cloud.
Topic 4	• Security for Developers: The exam topic is related to security and covers different features. These features help to create secure and trustworthy experiences. Another crucial sub-topic of this security topic is access control. This access control is achieved through robust authentication and authorization mechanisms.
Topic 5	• Sitecore APIs & Webhooks: In this topic, you encounter questions related to the different Sitecore APIs. These APIs are available for developers. With these APIs, developers interact with XM Cloud data and functionality.
Topic 6	• Sitecore Content Serialization: The topic delves into various ways to serialize and deserialize Sitecore content in XM Cloud applications. This topic also includes understanding JSON, XML, and OData serialization.
Topic 7	• Renderings and Layout: It covers the creation and usage of renderings. These renderings are the building blocks of user interfaces in different XM Cloud apps.

Sitecore XM Cloud Developer Certification Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

A developer wants to create a webhook that sends an HTTP request to a specified endpoint when the workflow moves to the approved state. What type of webhook should they use?

- A. Event handler
- B. Submit handler
- C. Validation action
- **D. Submit action**

Answer: D

Explanation:

In Sitecore XM Cloud, a webhook submit action is used to send an HTTP request to a specified endpoint when an item changes workflow state or a workflow command runs. Therefore, for a developer wanting to create a webhook that triggers when the workflow moves to the approved state, a webhook submit action would be the appropriate choice.

References: This information is confirmed by the Sitecore XM Cloud documentation, which details the different types of webhooks available and their specific uses, including the webhook submit action for workflow state changes¹.

NEW QUESTION # 15

Why should a developer assign security to roles instead of users when setting up security on a site?

- A. Security roles can assign individual rights and permissions to be configured by users.
- B. Individual users with a role can set and configure their own item security permissions.
- **C. Security can be managed more efficiently as the rights and permissions apply to a group of users.**
- D. Role-based security allows multiple users to have the same username.

Answer: C

Explanation:

According to the Sitecore XM Cloud Documentation for Developers¹, security roles define how different users access different types of records in Sitecore. To control access to data and resources, you can create or modify security roles and change the security roles that are assigned to your users. A user can have multiple security roles. Security role privileges are cumulative. Users

are granted the privileges that are available in each role that's assigned to them².

This makes it easier for you to manage your security system because you do not necessarily have to assign access rights for each item in your content tree. Instead, you only need to assign and manage the access rights on the parent items and then specify whether their descendants can inherit these access rights³.

NEW QUESTION # 16

Which of the following tasks are performed by the publishing pipeline to create an accurate snapshot of the content available for publishing from the Content Management instance? Select all that apply.

- A. Resolving dependencies
- B. Archiving expired content
- C. Calculating dependencies
- D. Calculating additional entities to publish

Answer: A,C,D

Explanation:

The publishing pipeline in Sitecore XM Cloud performs several tasks to ensure an accurate snapshot of content is available for publishing from the Content Management instance. These tasks include calculating additional entities to publish, calculating dependencies, and resolving dependencies. These steps are crucial for maintaining the integrity and consistency of the published content.

References: The Sitecore XM Cloud documentation outlines the publishing pipeline process, which includes the calculation and resolution of entities and dependencies as part of creating a publishing manifest¹.

NEW QUESTION # 17

A developer creates a new data template for a page. How do they ensure that the new template is available through Experience Edge?

- A. Create the template in the configured locations for Experience Edge (Feature, Foundation, Project, User Defined).
- B. Use the Experience Edge Admin API to add the template to the schema.
- C. Create the template anywhere in the /sitecore/templates folder.
- D. Add the parent path of the template to the Experience Edge config using a patch file.

Answer: D

Explanation:

Sitecore Experience Edge is a headless content delivery service that exposes content via GraphQL. For a newly created data template to be available in Experience Edge, it must be explicitly included in the GraphQL content schema configuration. This is done by modifying the Sitecore configuration using a patch file to include the parent path of the template.

* Locate the Parent Path of the Template

* The template must be within a content structure that is included in Experience Edge publishing.

* Modify the Experience Edge Configuration Using a Patch File

* Create a configuration patch file (e.g., include.ExperienceEdge.config) to add the template's parent path under the content section.

* Example patch file:

Steps to Ensure the Template is Available in Experience Edge: <configuration xmlns:patch="http://www.sitecore.net/xmlconfig/">

```
<sitecore>
<experienceedge>
<content>
<include hint="list:AddContentType">
<contentType path="/sitecore/templates/Project/MySite/MyPageTemplate" />
</include>
</content>
</experienceedge>
</sitecore>
</configuration>
```

* This ensures that content based on the new template is published to Experience Edge.

* Publish the Configuration Changes and Content

* Ensure the template and items are published.

* The updated schema should be reflected in the GraphQL endpoint of Experience Edge.

Why are the Other Options Incorrect?#A. Create the template in the configured locations for Experience Edge (Feature, Foundation, Project, User Defined).

* While placing templates in the correct Helix architecture layers (Feature, Foundation, Project) is a best practice, it does not automatically make them available in Experience Edge.

#C. Use the Experience Edge Admin API to add the template to the schema.

* The Admin API does not control content schema inclusion. Experience Edge follows Sitecore publishing rules, and templates must be included via the configuration patch file.

#D. Create the template anywhere in the /sitecore/templates folder.

* Simply creating a template does not make it available in Experience Edge. It must be explicitly added to the Experience Edge content schema configuration.

* Sitecore Experience Edge Configuration- Configuring Content in Experience Edge

* Sitecore GraphQL Content Schema Setup- GraphQL Content Schema

* Using Sitecore Patch Files- Sitecore Configuration Patching

References for Further Learning:

NEW QUESTION # 18

A developer creates templates and adds standard values; items created from the templates should automatically have the Title field populated with the name of the item. What should they do to ensure this occurs?

- A. Add _name token to the template's standard values Title field.
- B. Add \$name token to the template's standard values Title field.
- C. Set _name token in the new item's content Title field.
- **D. Set \$name token in the new item's content Title field.**

Answer: D

Explanation:

In Sitecore XM Cloud, to automatically populate the Title field of items created from a template with the name of the item, the developer should set the \$name token in the Title field of the template's standard values. This token is replaced with the actual item name when the item is created, ensuring that the Title field is automatically filled with the correct name.

References: The use of the \$name token in standard values is supported by Sitecore and is documented in their developer resources. It is specifically mentioned that Sitecore replaces the \$name token with the item's name during creation.

NEW QUESTION # 19

.....

Additionally, all operating systems also support this format. The third format is the desktop Sitecore-XM-Cloud-Developer Practice Exam software. It is ideal for users who prefer offline Sitecore-XM-Cloud-Developer exam practice. This format is supported by Windows computers and laptops. You can easily install this software in your system to use it anytime to prepare for the examination.
