# SK0-005 PDF study guide & CompTIA SK0-005 test-king

P.S. Free & New SK0-005 dumps are available on Google Drive shared by It-Tests: https://drive.google.com/open?id=1i1dzvTfOwSTmpDEFJrDdMmOh95XFpRU7

Our SK0-005 test material is known for their good performance and massive learning resources. In general, users pay great attention to product performance. After a long period of development, our SK0-005 research materials have a lot of innovation. We can guarantee that users will be able to operate flexibly, and we also take the feedback of users who use the CompTIA Server+ Certification Exam exam dumps seriously. Once our researchers find that these recommendations are possible to implement, we will try to refine the details of the SK0-005 Quiz guide. Our SK0-005 quiz guide has been seeking innovation and continuous development.

Obtaining the CompTIA Server+ certification through the SK0-005 Exam is a valuable asset for IT professionals who work with server infrastructure. It validates their knowledge and skills in managing, maintaining, and securing server infrastructure in a vendor-neutral environment. With the increasing demand for server infrastructure in various industries, the CompTIA Server+ certification can open up new opportunities for career advancement and growth.

SK0-005 Cert Torrent & SK0-005 Actual Answers & SK0-005 Practice Pdf

The SK0-005 learning materials from our company are very convenient for all people, including the convenient buying process, the download way and the study process and so on. Upon completion of your payment on our SK0-005 exam questions, you will receive the email from us in several minutes, and then you will have the right to use the SK0-005 Test Guide from our company. In addition, there are three different versions for all people to choose: PDF, Soft and APP versions. According to your actual situation, you can choose the suitable version from our SK0-005 study question.

CompTIA Server+ Certification Exam Sample Questions (Q312-Q317):

NEW QUESTION # 312
A server room with many racks of servers is managed remotely with occasional on-site support. Which of the following would be the MOST cost-effective option to administer and troubleshoot network problems locally on the servers?

- A. Crash cart
- B. Management port
- C. KVM
- D. IP KVM

Answer: D

Explanation:
Explanation
An IP KVM (keyboard, video, mouse) is a device that allows remote access and control of multiple servers over a network using a web browser or a clientsoftware. An IP KVM is a cost-effective option to administer and troubleshoot network problems locally on the servers, as it eliminates the need for physical presence or dedicated hardware for each server. A management port (A) is a network interface that is used for out-of-band management of network devices, such as routers or switches. A management port does not provide local access to servers. A crash cart (B) is a mobile unit that contains a monitor, keyboard, mouse, and other tools for troubleshooting servers in a data center. A crash cart requires physical access to each server and may not be cost-effective for many racks of servers. A KVM (D) is a device that allows switching between multiple servers using a single keyboard, video, and mouse. A KVM does not provide remote access over a network and requires physical connection to each server. NEW QUESTION # 313
A server technician installs a new NIC on a server and configures the NIC for IP connectivity. The technician then tests the connection using the ping command. Given the following partial output of the ping and ipconfig commands:

```
ipconfig /all

IPv4 address: 192.168.1.5
Subnet mask: 255.255.255.0
Default gateway: 192.168.1.1

pinging 192.168.1.1 with 32 bytes of data:

Request timed out
Reply from 192.168.1.1: bytes=32 time<1ms TTL=128
Request timed out
Reply from 192.168.1.1: bytes=32 time<1ms TTL=128
```

Which of the following caused the issue?

- A. Duplicate IP address
- B. Incorrect routing table
- C. Incorrect default gateway
- D. DHCP misconfiguration

Answer: A

Explanation:
Explanation
The ping command output shows that the NIC has an IP address of 192.168.1.100 and a default gateway of 192.168.1.1. However, when the technician tries to ping the default gateway, the reply comes from another IP address: 192.168.1.101. This means that there is another device on the network that has the same IP address as the default gateway, and it is responding to the ping request instead of the intended destination.

A duplicate IP address can cause network connectivity problems, such as packet loss, routing errors, or unreachable hosts. To resolve this issue, the technician should either change the IP address of the default gateway or the device that is conflicting with it, or use DHCP to assign IP addresses automatically and avoid conflicts.

The other options are not correct because they do not explain the ping output. An incorrect default gateway would cause no reply or a destination unreachable message, not a reply from a different IP address. A DHCP misconfiguration would cause an invalid or no IP address on the NIC, not a duplicate IP address on the network. An incorrect routing table would cause routing errors or unreachable destinations, not a reply from a different IP address.

NEW QUESTION # 314

Which of the following is the MOST appropriate scripting language to use for a logon script for a Linux box?

- A. Java
- B. PowerShell
- C. Batch
- D. VBS
- E. Shell

Answer: D

Explanation:

NEW QUESTION # 315

A company wants to find an affordable way to simulate a fail over of a critical application. The company does not currently have a solution for it. The application consists of 15 servers, and the company would like to simulate on production configurations and IP address schemes. Which of the following would be the most cost-effective solution?

- A. Build a cloud laaS and perform a fail over of the application.
- B. Build a warm site and perform a fail over of the application.
- C. Perform a tabletop fail over of the application.
- D. Build a cold site and perform a fail over of the application.
- E. Build a hot site and perform a fail over of the application.

Answer: A

Explanation:
Explanation
Cloud IaaS (Infrastructure as a Service) is a service model that allows users to rent virtualized computing resources over the internet, such as servers, storage, network, and software. Cloud IaaS can provide several benefits for disaster recovery and failover scenarios, such as:
Lower cost: Cloud IaaS can reduce the capital and operational expenses of building and maintaining a physical disaster recovery site, as users only pay for the resources they use on demand12.
Scalability: Cloud IaaS can offer flexible and elastic scalability of resources, as users can easily provision or deprovision resources according to their needs and workload12.
Availability: Cloud IaaS can ensure high availability and reliability of the application, as users can leverage the cloud provider's redundant and geographically distributed infrastructure12.
Simplicity: Cloud IaaS can simplify the failover process, as users can use the cloud provider's tools and services to automate and orchestrate the failover operations12.
Therefore, building a cloud IaaS and performing a failover of the application would be the most cost-effective solution for the company, as it would allow them to simulate a failover of a critical application on production configurations and IP address schemes without investing in a physical disaster recovery site.

NEW QUESTION # 316

An upper management team is investigating a security breach of the company's filesystem. It has been determined that the breach occurred within the human resources department. Which of the following was used to identify the breach in the human resources department?

- A. Password policy
- B. User activity reports
- C. User groups
- D. Multifactor authentication

Answer: B

Explanation:
User activity reports were used to identify the security breach in the human resources department. User activity reports are records of the actions and events performed by users on a system or network, such as login
/logout times, files accessed or modified, commands executed, or websites visited. User activity reports can help monitor and audit user behavior, detect and investigate security incidents, and enforce policies and compliance. User activity reports can be generated by various tools, such as log management software, security information and event management (SIEM) systems, or user and entity behavior analytics (UEBA) solutions. References: [CompTIA Server+ Certification Exam Objectives], Domain 5.0: Security, Objective
5.2: Given a scenario, apply logical access control methods.

NEW QUESTION # 317

......

It is proved that if you study with our SK0-005 exam questions for 20 to 30 hours, then you will be able to pass the SK0-005 exam with confidence. Because users only need to spend little hours on the SK0-005 quiz guide, our learning materials will help users to learn all the difficulties of the test site, to help users pass the qualifying examination and obtain the qualification certificate. If you think that time is important to you, try our SK0-005 Learning Materials and it will save you a lot of time.
