BONUS!!! Download part of Exam4Free SK0-005 dumps for free: <https://drive.google.com/open?id=1-ajLe3MirQAS3RIgzbtoap849An68nFw>

Advancement in SK0-005 information and communications technology generates huge potential for moving business and production up the value-chain, and improving the quality of life of citizens. And there is no doubt that you can get all kinds of information in cyber space now, SK0-005 Latest Torrent is not an exception. I strongly recommend the study materials compiled by our company for you, the advantages of our SK0-005 exam questions are too many to enumerate; I will just list three of them for your reference.

CompTIA SK0-005 exam is an important certification for IT professionals who are interested in pursuing a career in server administration. CompTIA Server+ Certification Exam certification covers a wide range of topics and demonstrates a candidate's ability to manage complex server environments. It is vendor-neutral and recognized globally, making it an excellent choice for individuals who are interested in pursuing an international career in IT. With the right preparation and hands-on experience, candidates can pass the exam and position themselves for career advancement.

## What are the Key Features of the CompTIA SK0-005 Certification Exam

This exam will validate the skills and knowledge of the professionals. The candidate should have the basic knowledge of designing, implementing and troubleshooting the virtualization technologies.

CompTIA SK0-005 Certification Exam has following key features:

- Design and implement server hardware redundancy for high availability in a data center environment

- The CompTIA SK0-005 Certification Exam is a validating test for server administrators working in physical as well as virtualized environments. It will validate the knowledge and technical skills of the professionals to design, implement, configure, manage and maintain the data center virtualization solutions.
- Design and implement network connectivity in a data center environment
- Manage logical storage devices using industry best practices in a data center environment
- Install and configure server hardware components based on requirements in a data center environment
- The CompTIA SK0-005 Certification Exam will validate your ability to perform these tasks. **CompTIA SK0-005 exam dumps** will enhance your abilities.

## SK0-005 Upgrade Dumps & Authorized SK0-005 Test Dumps

Different from other similar education platforms, the SK0-005 quiz guide will allocate materials for multi-plate distribution, rather than random accumulation without classification. How users improve their learning efficiency is greatly influenced by the scientific and rational design and layout of the learning platform. The SK0-005 prepare torrent is absorbed in the advantages of the traditional learning platform and realize their shortcomings, so as to develop the SK0-005 test material more suitable for users of various cultural levels. If just only one or two plates, the user will inevitably be tired in the process of learning on the memory and visual fatigue, and the SK0-005 test material provided many study parts of the plates is good enough to arouse the enthusiasm of the user, allow the user to keep attention of highly concentrated.

CompTIA SK0-005, also known as the CompTIA Server+ certification exam, is designed to validate the knowledge and skills of IT professionals who are responsible for server administration. CompTIA Server+ Certification Exam certification exam covers a wide range of server-related topics, including installation, configuration, maintenance, security, disaster recovery, and troubleshooting. SK0-005 Exam is intended for individuals with at least 18 to 24 months of experience in server administration and is vendor-neutral, which means that it covers a broad range of server technologies from various vendors.

## CompTIA Server+ Certification Exam Sample Questions (Q154-Q159):

### NEW QUESTION # 154

A server administrator is instating a new server in a data center. The administrator connects the server to a midplane but does not connect any cables Which of the following types of servers is the administrator MOST likely installing?

- A. Virtual
- B. Tower
- C. Rack
- **D. Blade**

**Answer: D**

Explanation:

Explanation

A blade server is a type of server that is installed in a chassis or an enclosure that provides power, cooling, networking, and management features. The blade server does not have any cables attached to it, as it connects to the chassis through a midplane or a backplane. A blade server can save space, energy, and cost compared to other types of servers. Verified References: [Blade server], [Chassis]

### NEW QUESTION # 155

A technician needs to install a Type 1 hypervisor on a server. The server has SD card slots, a SAS controller, and a SATA controller, and it is attached to a NAS. On which of the following drive types should the technician install the hypervisor?

- A. SATA drive
- B. NAS drive
- **C. SAS drive**
- D. SD card

**Answer: C**

Explanation:

Explanation

The technician should install the Type 1 hypervisor on a SAS drive. A Type 1 hypervisor is a layer of software that runs directly on top of the physical hardware and creates virtual machines that share the hardware resources. A Type 1 hypervisor requires fast and reliable storage for optimal performance and stability. A SAS drive is a type of hard disk drive that uses Serial Attached SCSI (SAS) as its interface protocol. SAS drives offer high speed, low latency, and high reliability compared to other types of drives, such as SD cards, NAS drives, or SATA drives. SD cards are flash memory cards that offer low cost and portability but have low speed, low capacity, and low durability. NAS drives are network-attached storage devices that offer high capacity and easy access but have high latency and low reliability due to network dependency. SATA drives are hard disk drives that use Serial ATA (SATA) as their interface protocol. SATA drives offer moderate speed, moderate cost, and moderate reliability but have lower performance and durability than SAS drives.

#### NEW QUESTION # 156

Which of the following backup types should be chosen for database servers?

- A. Differential
- B. Incremental
- C. Open file
- **D. Synthetic full**

**Answer: D**

Explanation:

Explanation

A synthetic full backup is a type of backup that combines a full backup with one or more incremental backups to create a new full backup without accessing the source data. This type of backup is suitable for database servers, as it reduces the backup window, minimizes the impact on the server performance, and provides faster recovery time. Verified References: [Synthetic Full Backup]

#### NEW QUESTION # 157

An administrator needs to disable root login over SSH. Which of the following files should be edited to complete this task?

- **A. /etc/ssh/sshd\_config**
- B. /root/.ssh/ssh\_config
- C. /root.ssh/sshd/config
- D. /etc.sshs\_sshd\_config

**Answer: A**

Explanation:

To disable root login over SSH, the server administrator needs to edit the SSH configuration file located at /etc/ssh/sshd\_config. This file contains various settings for the SSH daemon that runs on the server and accepts incoming SSH connections. The administrator needs to find the line that says PermitRootLogin and change it to no or comment it out with a # symbol. Then, the administrator needs to restart the SSH service for the changes to take effect. Reference: <https://www.howtogeek.com/828538/how-and-why-to-disable-root-login-over-ssh-on-linux/>

#### NEW QUESTION # 158

A systems administrator is setting up a server on a LAN that uses an address space that follows the RFC 1918 standard. Which of the following IP addresses should the administrator use to be in compliance with the standard?

- A. 11.251.196.241
- B. 193.168.145.241
- C. 171.245.198.241
- **D. 172.16.19.241**

**Answer: D**

Explanation:

The administrator should use 172.16.19.241 as an IP address to be in compliance with RFC 1918 standard.

RFC 1918 defines three ranges of IP addresses that are reserved for private internets, meaning they are not globally routable on the public Internet and can be used within an enterprise without any risk of conflict or overlap with other networks. These ranges are:

10.0.0.0 - 10.255.255.255 (10/8 prefix) 172.16.0.0 - 172.31.255.255 (172.16/12 prefix) 192.168.0.0 -

192.168.255.255 (192.168/16 prefix)

Out of these ranges, only 172.16.19.241 falls within one of them (172.16/12 prefix). The other options are either public IP addresses that belong to other organizations or networks (11.251.196.241, 171.245.198.241) or invalid IP addresses that do not conform to any standard (193.168.145.241).
