SMI300XE Reliable Exam Simulator | SMI300XE Valid Test Sims

Thus, we come forward to assist them in cracking the Supermicro SMI300XE examination. Don't postpone purchasing Supermicro SMI300XE exam dumps to pass the crucial examination. Prep4pass study material is available in three versions: Supermicro SMI300XE Pdf Dumps, desktop practice exam software, and a web-based Supermicro SMI300XE practice test.

Supermicro MI300X Expert (SMI300XE) Certification Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

Which of the following are important safety precautions when removing the GPU tray?

- A. Unnecessary movement can damage the fans below the GPU tray.
- **B. All of the above.**
- C. Keep the tray straight to prevent it from tilting up or down, which can damage the upper and lower portion of the chassis.
- D. For your own safety, and the safety of the system, two people should remove the tray which weighs more than 70 pounds.

Answer: B

Explanation:

When removing the GPU tray in an MI300X system, the following precautions must be taken:

- * Two people should remove the tray as it weighs over 70 pounds, making it unsafe for one person to handle.
- * Keeping the tray straight prevents it from tilting, which can damage the chassis components.
- * Unnecessary movement can damage cooling fans directly beneath the GPU tray.

Since all the above precautions are critical for safe removal, the correct answer is D (All of the above).

NEW QUESTION # 22

How would you identify and differentiate a failed GPU that needs to be replaced from other GPUs in the system that are functional?

- A. By the serial number
- B. By the part number
- C. By the discoloration
- **D. By the warning light**

Answer: D

Explanation:

A failed GPU in the Supermicro MI300X system can be identified using the warning light indicator.

Supermicro systems include LED diagnostic indicators that display the operational status of various components, including GPUs.

When a GPU malfunctions, the system will trigger an alert that is displayed as a warning light on the GPU tray or the server chassis.

This allows technicians to visually identify the faulty GPU without requiring extensive hardware testing.

* Discoloration (A) is not a reliable method of identifying a failed GPU as it would require physical degradation, which is uncommon.

* Serial numbers (B) and Part numbers (C) are used for inventory tracking but do not indicate functional status.

* Warning lights (D) are the recommended method, as documented in the system health monitoring section of Supermicro's documentation, which details LED indicators and diagnostic lights for system status monitoring.

NEW QUESTION # 23

Which SUM command is used to check basic system information?

- A. `sum.exe -I 10.1.1.100 -u ADMIN -p ADMIN -c checkassetinfo`
- **B. `sum.exe -i 10.1.1.100 -p ADMIN -u ADMIN -c checkbasicinfo`**
- C. `sum.exe -ip 10.1.1.100 -user ADMIN -pass ADMIN -command checksysteminfo`
- D. `sum.exe call system information`

Answer: B

Explanation:

The SUM (Supermicro Update Manager) command to check basic system information is:

css

CopyEdit

```
sum.exe -i 10.1.1.100 -p ADMIN -u ADMIN -c checkbasicinfo
```

* Option A (Correct): This is the correct syntax for retrieving basic system information using SUM.

* Option B (Incorrect): The syntax is incorrect and will not execute properly.

* Option C (Incorrect): The "checksysteminfo" command is not valid in SUM.

* Option D (Incorrect): "checkassetinfo" retrieves system asset details, not basic system information.

NEW QUESTION # 24

What information is shown in the IPMI storage monitoring section?

- A. Severity of health events
- **B. Attached storage devices**
- C. Overheating issues
- D. The motherboard

Answer: B

Explanation:

The IPMI storage monitoring section provides information about attached storage devices.

* Option A (Incorrect): IPMI does not display motherboard details in this section.

* Option B (Incorrect): Overheating issues are logged separately in the event logs.

* Option C (Correct): IPMI storage monitoring tracks attached storage devices.

* Option D (Incorrect): Severity of health events is found in system logs, not storage monitoring.

NEW QUESTION # 25

What is the main purpose of the AGFHC software tool?

- A. The AGFHC tool is used to diagnose and stress test components on the MI300X. This will help identify and validate component issues.
- B. The AGFHC tool is used for checking support phone numbers and emails for AMD GPU support staff who should be the first point of contact for any issues related to AMD GPUs.
- C. The AGFHC tool is used to support other platforms such as Mac OS and Windows so they can all share GPU system resources.
- D. The AGFHC tool is used to update firmware and BIOS on the GPU to ensure that it is up to date with the latest code.

Answer: A

Explanation:

The AGFHC tool is designed to diagnose and stress test system components in the MI300X platform, helping identify faults in GPUs, CPUs, and system hardware.

* Option A (Correct): AGFHC is used for diagnostics and stress testing.

* Option B (Incorrect): The tool does not enable cross-platform GPU resource sharing.

* Option C (Incorrect): While it interacts with firmware, it does not update BIOS.

* Option D (Incorrect): The tool is not a support contact directory.

NEW QUESTION # 26

.....

In today's competitive technology sector, the Supermicro SMI300XE certification is a vital credential. Many applicants, however, struggle to obtain up-to-date and genuine Supermicro SMI300XE exam questions in order to successfully prepare for the exam. If you find yourself in this circumstance, don't worry since Prep4pass has you covered with their real Supermicro SMI300XE Exam Questions. Let's look at the characteristics of these MI300X Expert (SMI300XE) Certification Exam test Questions and how they can help you pass the Supermicro SMI300XE certification exam on the first try.
