Are you tired of the lives of ordinary light? Do you want to change yourself? Don't mention it, our CertkingdomPDF is at your service anytime. Supermicro SMI300XS certification test is very popular in the IT field. A majority of people want to have the Supermicro SMI300XS certification. Trough Supermicro SMI300XS test, you will have a better and easier life. IT talent is always respectable. CertkingdomPDF will give you the opportunity to pass Supermicro SMI300XS Exam. CertkingdomPDF Supermicro SMI300XS exam dumps fit in with our need. High quality certification training materials is very useful. 100% guarantee to pass Supermicro SMI300XS exam.

In the era of informational globalization, the world has witnessed climax of science and technology development, and has enjoyed the prosperity of various scientific blooms. In 21st century, every country had entered the period of talent competition, therefore, we must begin to extend our SMI300XS personal skills, only by this can we become the pioneer among our competitors. At the same time, our competitors are trying to capture every opportunity and get a satisfying job. In this case, we need a professional SMI300XS Certification, which will help us stand out of the crowd and knock out the door of great company.

SMI300XS Valid Exam Pass4sure, Useful SMI300XS Dumps

CertkingdomPDF provides an opportunity for fulfilling your career goals and significantly ease your way to become SMI300XS Certified professional. While you are going attend your SMI300XS exam, in advance knowledge assessment skips your worries regarding actual exam format. Groom up your technical skills with CertkingdomPDF practice test training that has no substitute at all. Get the best possible training through CertkingdomPDF; our practice tests particularly focus the key contents of SMI300XS Certification exams. CertkingdomPDF leads the SMI300XS exam candidates towards perfection while enabling them to earn the SMI300XS credentials at the very first attempt. The way our products induce practical learning approach, there is no close alternative.

Supermicro MI300X GPU Service Specialist (SMI300XS) Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

Exhibit:

There is a flap door over the ribbon cable connection. To open it, use your finger to press down on the top of the flap door and pop it open. True or False?

- A. False
- B. True

Answer: B

Explanation:

The flap door mechanism is a protective feature in Supermicro MI300X systems designed to secure ribbon cable connections.

How to open it correctly?

- * Press down on the top of the flap door# This disengages the locking mechanism.
- * The flap door will "pop open" safely without damaging the ribbon cable.
- * Forcing the flap without pressing down properly may break the connector.

Official Documentation Reference:

- * Supermicro AS-8125GS-TNMR2 Maintenance Manual provides specific instructions on pressing down the flap door before opening it.

NEW QUESTION # 35

To disengage a PCIe, motherboard, or GPU tray on the AS-8125GS-TNMR2 system, loosen the screws on either side of the tray, then slowly pull the tray out to disengage it. True or False?

- A. False
- B. True

Answer: B

Explanation:

Why Must the Screws Be Loosened First?

* The PCIe, motherboard, and GPU trays in Supermicro MI300X systems are secured by screws on both sides to ensure:

- * Structural stability
- * Vibration resistance
- * Secure connection of PCIe lanes and data paths

Proper Tray Removal Process:

#Step 1: Identify the tray to be removed (PCIe, motherboard, or GPU). #Step 2: Loosen screws on both sides to release tension on the tray. #Step 3: Slowly and evenly pull the tray out to avoid damaging connectors. #Step

4: Support the tray from the bottom while sliding it out to prevent bending.

Why This Method Is Important?

- * Preventing Connector Damage# Pulling the tray without loosening screws could damage PCIe connectors or misalign the board.
- * Avoiding Strain on Other Components# A stuck tray could put pressure on adjacent cables and connectors.
- * Ensuring a Safe Removal# The slow and controlled movement reduces the risk of accidentally dropping or flexing the tray.

Why False Is Incorrect?

* If False were correct, it would suggest that the tray can be removed without loosening screws, which is not possible due to the secure mounting system.

Official Documentation Reference:

* Supermicro AS-8125GS-TNMR2 Hardware Maintenance Guide confirms that loosening screws and carefully pulling the tray out is the correct disengagement procedure.

NEW QUESTION # 36

Exhibit:

Where are the 2 screws located before you can remove the air shroud?

- A. On top of the motherboard tray
- B. On both sides of the motherboard tray

- C. On both sides of the GPU tray
- D. On both sides of the PCIe tray

Answer: B

Explanation:

The air shroud is a crucial component in the Supermicro MI300X GPU system, designed to direct airflow efficiently over high-performance GPUs and CPUs. Before removing the air shroud, two screws must be removed, and they are located on both sides of the motherboard tray.

Why are these screws important?

- * They secure the air shroud to the chassis, preventing unwanted movement.
- * Removing them ensures the air shroud can be lifted safely, without damaging cooling pathways.
- * They prevent vibrations from GPU cooling fans from dislodging the shroud over time.

Incorrect Answers Explained:

* A (On top of the motherboard tray)# Incorrect, as the screws are not mounted on top but on the sides of the motherboard tray.

* C (On both sides of the PCIe tray)# The PCIe tray does not secure the air shroud.

* D (On both sides of the GPU tray)# The GPU tray does not directly hold the air shroud in place.

Official Documentation Reference:

* Supermicro AS-8125GS-TNMR2 Cooling System Guide states that the air shroud is secured by two screws on both sides of the motherboard tray.

NEW QUESTION # 37

How many screws need to be loosened across the bracket in the bottom of the motherboard tray in front of the backplane?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

When servicing the Supermicro MI300X GPU system, there are 3 screws securing the bracket at the bottom of the motherboard tray in front of the backplane.

Purpose of these screws:

- * They secure the backplane's structural integrity to prevent vibration-related failures.
- * Loosening them allows the removal or replacement of backplane components safely.
- * They prevent accidental disconnections caused by handling or system movement.

Why other options are incorrect?

* A (13 screws)# This number is too high for just the bottom bracket.

* B (21 screws) & C (30 screws)# These numbers apply to entire system disassembly, not just the bottom bracket.

Official Documentation Reference:

* Supermicro AS-8125GS-TNMR2 Disassembly Guide specifies that only 3 screws need to be loosened to access the bottom bracket securing the backplane.

NEW QUESTION # 38

Why is there a yellow warning label on the flat panel/ribbon cable?

- A. To warn you that you must remove the flat panel cable after removing the midplane from the chassis or you will damage the cable.
- B. To warn you that the cable is hot.
- **C. To warn you that you must remove the flat panel/ribbon cable before removing the midplane from the chassis or you will damage the cable.**
- D. To warn you that you can optionally remove the flat panel cable before removing the midplane from the chassis or you will damage the cable.

Answer: C

Explanation:

The yellow warning label is a critical indicator to prevent damage when servicing the midplane and ribbon cable connections.

Reason for Warning Label:

- * The flat panel/ribbon cable is delicate and is connected between multiple system components.
- * If the midplane is removed first, it stretches and applies force on the ribbon cable, leading to:
- * Broken cable connectors
- * Torn ribbon cable
- * System interface failure (front panel controls, LED indicators, or data communication) Why other options are incorrect?
- * A (Cable is hot) # Ribbon cables do not generate heat and this is not the purpose of the warning label.
- * B (Remove after midplane) # The cable must be removed BEFORE the midplane, not after.
- * C (Optional removal) # It is mandatory, not optional, to prevent damage.

Official Documentation Reference:

* Supermicro AS-8125GS-TNMR2 Maintenance Manual states that removing the flat panel/ribbon cable first is a required step before handling the midplane.

NEW QUESTION # 39
