Free SOL-C01 Download | SOL-C01 Valid Learning Materials

The SOL-C01 prep torrent we provide will cost you less time and energy. You only need relatively little time to review and prepare. After all, many people who prepare for the SOL-C01 exam, either the office workers or the students, are all busy. But the SOL-C01 test prep we provide are compiled elaborately and it makes you use less time and energy to learn and provide the SOL-C01 Study Materials of high quality and seizes the focus the SOL-C01 exam. It lets you master the most information and costs you the least time and energy.

Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q52-Q57):

NEW QUESTION # 52

You are tasked with optimizing a frequently queried table 'SALES DATA' that experiences many updates. Which of the following Snowflake table features can significantly improve query performance in this scenario?

- A. Partitioning the table on the date column.
- B. Creating a View on top of the table.
- C. Clustering the table on the most frequently filtered columns.
- D. Using a Transient table instead of a Permanent table.
- E. Using a Temporary table instead of a Permanent table.

Answer: C

Explanation:
Clustering is the most effective way to improve query performance for frequently queried tables, especially those with updates. Clustering organizes the physical storage of data based on the clustering keys, allowing Snowflake to efficiently prune data during queries. Views do not affect the storage of the actual data, and transient/temporary tables are generally used for other purpose and will not improve the performance of the queries. Snowflake does not support Partitioning of the table by Users.

NEW QUESTION # 53
What MOST accurately describes Snowflake?

- A. A transactional database
- B. An AI data cloud platform
- C. An ETL tool
- D. A data warehouse software

Answer: B

NEW QUESTION # 54
Which of the following statements are correct regarding Snowflake Data Exchange and Data Marketplace? (Select TWO)

- A. Data Marketplace supports both free and paid data listings, while Data Exchange only supports free listings.
- B. Data Exchange allows organizations to privately share data with specific partners, while Data Marketplace is a public forum for sharing data.
- C. Both Data Exchange and Data Marketplace require data providers to create listings, but Data Exchange listings are only visible to invited consumers.
- D. Data Exchange requires pre-negotiated contracts between providers and consumers, while Data Marketplace allows consumers to access data without direct provider approval.
- E. Data Exchange enables the data provider to monitor which consumers are accessing their data and track usage, but Data Marketplace does not.

Answer: B,C

Explanation:
Data Exchange is for private data sharing, and Data Marketplace is a public forum. Both require listings but differ in audience. Data Marketplace can have paid or free listings. Snowflake allows tracking usage of data on Data Exchange and Data Marketplace. Data Exchange doesn't require pre-negotiated contracts, although it's often the case.

NEW QUESTION # 55
You have a table 'SALES DATA' with columns 'PRODUCT_ID' ONT), 'SALE_DATE' (DATE), and
'SALE AMOUNT' You want to load data into this table from various sources. You need to insert multiple rows in a single INSERT statement for performance reasons. However, one of the data sources occasionally provides 'SALE AMOUNT' as 'NULL'. What is the best way to handle the
'NULL' values in the 'INSERT' statement while ensuring that the rest of the data is loaded correctly?

- A. Use in the insert statement to convert empty string to NULL.
- B. Insert `NIJLC directly into the 'SALE_AMOUNT column.
- C. Replace the `NULL ` values with 0 in the 'INSERT statement.
- D. Use the 'DEFAULT keyword for the SALE AMOUNT column in the 'INSERT statement when the value is

- E. Omit the 'SALE AMOUNT column from the 'INSERT statement when the value is 'NULL'.

Answer: B

Explanation:
Option E is the most straightforward and correct approach. If the 'SALE_AMOIJNT column is defined to allow 'NULL' values (which is common for numeric columns representing amounts), you can directly insert into the column. Option A will cause an error if all columns are not specified in INSERT statement. Option B changes the meaning of your data by changing the NULL to 0. Option C will only work if the 'SALE AMOUNT column has a default defined, and D is not needed as NULL can be inserted as NULL into the column.

NEW QUESTION # 56

A financial institution is using Snowflake to store customer communications. They need to translate all incoming emails from various languages into English for compliance purposes. The
'EMAILS' table has columns 'EMAIL ID', 'EMAIL CONTENT', and DETECTED LANGUAGE. Due to the high volume of emails, they want to optimize the translation process using a virtual warehouse and caching. Which of the following strategies will BEST improve the performance and cost-effectiveness of translating the emails using Snowflake Cortex LLM's 'TRANSLATE function? (Select all that apply)

- A. Utilize Snowflake's result caching by ensuring the SQL queries calling the `TRANSLATE function are deterministic (same input always produces the same output) and the underlying data doesn't change frequently.
- B. Use a smaller virtual warehouse size to reduce costs, even if it takes longer to translate the emails.
- C. Bypass the Translate and do a simple copy of the EMAIL CONTENT in the destination table as its much faster.
- D. Use a larger virtual warehouse size for faster processing, even during off-peak hours.
- E. Create a materialized view that stores the translated emails, updating it incrementally as new emails arrive.

Answer: A,E

Explanation:
Options C and D are the best strategies. Snowflake's result caching can significantly improve performance if the same translation requests are repeated, and the data hasn't changed.
Materialized views allow you to pre-compute and store the translations, reducing the need to call the 'TRANSLATE' function repeatedly. Larger warehouses (Option A) increase costs without necessarily improving efficiency if caching is not utilized. Smaller warehouses (Option B) might be cost-effective but increase processing time. Option E bypasses the problem, therefore is not a valid answer

NEW QUESTION # 57

......

The passing rate of our SOL-C01 study materials is the issue the client mostly care about and we can promise to the client that the passing rate of our product is 99% and the hit rate is also high. Our SOL-C01 practice braindumps are selected strictly based on the Real SOL-C01 Exam and refer to the exam papers in the past years. Our expert team devotes a lot of efforts on them and guarantees that each answer and question is useful and valuable.
